Part I Principles

1	Looking Back	3
2	Geological Principles	5
2.1	The Actualist Leitmotif According to Hutton and Lyell	5
2.2	Folding, Faulting and Fracturing	8
2.3	Weathering, Erosion and Deposition	21
2.4	Fluvial, Glacial and Eolian Landforms	27
2.5	Sedimentation, Diagenesis, Metamorphosis, Anatexis	32
2.6	Our Unique and Rare Earth	39
2.7	Key Messages and Outlook	41
2.8	Reading Recommendations	41
2.9	Exercises	42
3	Mechanical Principles	45
3.1	The Concept of Force According to Newton	45
3.2	Euler's Free Body Principle	47
3.3	Stevin's Polygon of Forces and the Concept of Stability	51
3.4	Hooke's Modulus of Elasticity and the Concept of Serviceability	53
3.5	The Conservation of Mass According to Newton, Bernoulli and Euler	56
3.6	The Conservation of Energy According to Johann and Daniel Bernoulli	56
3.7	Darcy's Law	58
3.8	Laplace's Flow Equation	60
3.9	Key Messages and Outlook	62
3.10	Reading Recommendations	63
3.11	Exercises	64
4	Principles of Uncertainty	67
4.1	Uncertainty in Engineering Geology	67
4.2	Describing Data Sets	67
4.2.1	Statistical Parameters	67
4.2.2	Distribution Functions	68
4.3	Updating Data	74
4.4	Comparing Data Sets	78
4.4.1	Correlation and Autocorrelation	78
4.4.2	Semivariograms	79
4.4.3	Cross-Correlation and Cross-Association	85
4.4.4	Markov Chains	87
4.5	Data Patterns	88
4.5.1	Plane Patterns and Poisson Fields	88

4.5.2	Circular Patterns and von Mises Distributions	89
4.5.3	Spherical Patterns and the Analysis of Eigenvectors	91
4.5.4	Fractal Patterns	94
4.6	Mapping Spatial Information	97
4.6.1	Conventional Mapping Techniques	97
4.6.2	Mapping Concrete Search Targets	98
4.6.3	Regionalized Variables	100
4.6.4	Fuzzy Logic	106
4.7	Key Messages and Outlook	109
4.8	Reading Recommendations	110
4.9	Exercises	111

Part II Site Investigation

5	Introduction to Site Investigation	117
5.1	Objectives	117
5.2	Stages	117
5.3	Reporting	119
5.4	Key Messages and Outlook	121
5.5	Exercises	121
6	Preliminary Investigations	123
6.1	Desk Study	123
6.1.1	Maps	124
6.1.2	Aerial Photos	128
6.1.3	Archives	133
6.1.4	Technical Reports	137
6.2	Field Reconnaissance	137
6.2.1	General and Thematic Mapping	139
6.2.2	Geomorphological Survey	140
6.2.3	Soil Survey	142
6.2.4	Stratigraphic and Petrographic Survey	146
6.2.5	Joint Survey	147
6.2.6	Biological Surveys	151
6.3	Presentation of the Results	154
6.3.1	Maps	155
6.3.2	Profiles	157
6.3.3	Block Diagrams	157
6.3.4	Animation	157
6.4	Key Messages and Outlook	157
6.5	Reading Recommendations	160
6.6	Exercises	162
7	Main Investigations	163
7.1	Stage of Investigation	163
7.2	Trenches, Shafts, Adits	163
7.3	Sounding	165
7.3.1	Standard Penetration Test	165
7.3.2	Cone Penetration Test	166
7.4	Sampling	167
7.4.1	Percussion Probing	167
7.4.2	Auger Borings	168
7.4.3	Open End Sampling Spoons	168

7.4.4	Wash Borings	168
7.4.5	Rotary Drilling	169
7.4.6	Subsequent Utilization of Boreholes	172
7.5	Geophysical Investigations	173
7.5.1	Seismic Surveys	173
7.5.2	Gravimetric Surveys	175
7.5.3	Geomagnetic Surveys	177
7.5.4	Geoelectric Surveys	179
7.5.5	Electromagnetic Surveys	181
7.5.6	Induced Polarization	184
7.5.7	Self-Potential Surveys	184
7.5.8	Telluric Surveys	184
7.6	Hydrogeological Investigations	184
7.6.1	Depth to Groundwater	185
7.6.2	Movement of Groundwater	186
7.6.3	Conductivity of Soil	187
7.6.4	Conductivity of Intact Rock	195
7.6.5	Conductivity of Rock Mass	195
7.7	Geotechnical Parameters for Soils	199
7.7.1	Soil as a Three-Phase-System	199
7.7.2	Grain Size Distribution	201
7.7.3	Density of Non-cohesive Soils	204
7.7.4	Consistency of Cohesive Soils	204
7.7.5	Compaction	205
7.7.6	Swelling	206
7.7.7	Activity	207
7.7.8	Sensitivity	209
7.7.9	Strength	210
7.7.10	Deformability	213
7.8	Geotechnical Parameters for Rock	216
7.8.1	Rock as a Discontinuous Medium	216
7.8.2	Strength of Intact Rock	217
7.8.3	Strength of Rock Mass	219
7.8.4	Deformability of Intact Rock	220
7.8.5	Deformability of Rock Mass	221
7.9	Key Messages and Outlook	222
7.10	Reading Recommendations	222
7.11	Exercises	223
8	Accompanying Investigations	227
8.1	Stage of Investigation	227
8.2	Precautionary Taking of Evidence	227
8.3	Taking of Evidence Accompanying the Project	228
8.4	Recording of New Outcrops	228
8.5	Adjustment of the Planning	229
8.6	Soil and Species Protection	229
8.7	Key Messages and Outlook	231
8.8	Reading Recommendations	231
9	Follow-Up Investigations	233
9.1	Stage of Investigation	233
9.2	Monitoring of the Terrain	233
9.3	Monitoring Structures	235
9.4	Monitoring Groundwater	236

9.5	Monitoring Soil, Water and Air Quality	237
9.6	Monitoring Vibrations	237
9.7	Correlation of Measurement Series	237
9.8	Key Messages and Outlook	237
9.9	Reading Recommendations	238

Part III Applications

10	Mass Movements	241
10.1	Phenomena	241
10.2	Mechanisms and Causes	244
10.2.1	Sliding	244
10.2.2	Toppling	247
10.2.3	Buckling and Shearing Off	248
10.2.4	Falling	248
10.2.5	Flowing	249
10.2.6	Creeping and Drifting	255
10.2.7	Complex Mass Movements	259
10.2.8	Secondary Effects	261
10.2.9	Causes and Triggers	261
10.3	Methods and Analyses	266
10.3.1	Kinematic and Mechanical Preconditions	266
10.3.2	Soil	267
10.3.3	Rock Mass	271
10.4	Prevention, Protection and Stabilization	284
10.4.1	Prevention and Monitoring	284
10.4.2	Protection and Stabilization	290
10.5	Key Messages and Outlook	300
10.6	Reading Recommendations	300
10.7	Exercises	301
11	Subsidence	303
11.1	Phenomena	303
11.2	Mechanisms and Causes	305
11.2.1	Karst	305
11.2.2	Mining	309
11.2.3	Causes and Triggers	320
11.3	Methods and Analyses	321
11.3.1	Regular Subsidence	321
11.3.2	Irregular Subsidence	322
11.4	Prevention, Protection and Stabilization	326
11.4.1	Prevention and Monitoring	326
11.4.2	Protection and Stabilization	329
11.5	Key Messages and Outlook	332
11.6	Reading Recommendations	333
11.7	Exercises	333
12	Engineering Structures	335
12.1	Phenomena	335
12.2	Shallow Foundations	338
12.2.1	Types	338
12.2.2	Limit States	339
12.2.3	Stress Propagation	339

12.2.4	Direct Settlement Calculation	341
12.2.5	Indirect Settlement Calculation	347
12.2.6	Settlement on Bedrock	348
12.2.7	Eccentricity	349
12.2.8	Stability	351
12.2.9	Bearing Capacity of Soil	352
12.2.10	Bearing Capacity of Bedrock	357
12.2.11	Sliding	358
12.2.12	Tilting	359
12.2.13	Uplift	359
12.3	Deep Foundations	360
12.3.1	Types	361
12.3.2	Limit States	362
12.3.3	Pile Groups	362
12.3.4	Negative Skin Friction	363
12.3.5	Piles in Swellable Ground	363
12.3.6	Caisson Foundations	363
12.4	Building on Problematic Ground	363
12.4.1	Delineation of Hazard Zones	363
12.4.2	Ground Improvement	366
12.5	Retaining Structures	369
12.5.1	Types	369
12.5.2	Limit States	370
12.5.3	Earth Pressure	374
12.6	Dams and Dykes	378
12.6.1	Types	378
12.6.2	Limit States	381
12.6.3	Underflow and Leakage	382
12.6.4	Induced Seismicity	383
12.7	Underground Construction	383
12.7.1	Types	383
12.7.2	Governing Factors	384
12.7.3	Design Methods	384
12.7.4	Excavation Methods	390
12.7.5	Securing, Shoring and Lining	391
12.7.6	Problems in Underground Construction	393
12.8	Key Messages and Outlook	395
12.9	Reading Recommendations	396
12.10	Exercises	397
13	Contaminated Sites and Waste Disposal	399
13.1	Pollutants in the Ground	399
13.1.1	Groups of Pollutants	400
13.1.2	Migration of Pollutants	403
13.1.3	Investigation of Contaminated Sites	404
13.1.4	Remediation of Contaminated Sites	405
13.1.5	Ex Situ Techniques	406
13.1.6	In Situ Techniques	408
13.1.7	Method of Immobilization or Isolation	411
13.1.8	Procedure Comparison	414
13.2	Waste Disposal	416
13.2.1	Waste Types	416
13.2.2	Landfilling	419
13.2.3	Repositories	423

13.3	Key Messages and Outlook	429
13.4	Reading Recommendations	429
13.5	Exercises	430
14	New Fields and Horizons	431
14.1	Sustainability	431
14.1.1	The Concept of Sustainability	431
14.1.2	Land as a Resource	432
14.1.3	Waste as a Resource	433
14.2	Energy and Climate	436
14.2.1	Fossil Energy and Fracking	437
14.2.2	The Energy Transition	437
14.2.3	Renewable Energy	438
14.2.4	Shallow Geothermal Heat and Heat Pumps	438
14.2.5	Deep Geothermal Heat and Power	441
14.2.6	Anthropogenic Energy Sources	442
14.3	Storing Energy	442
14.4	Storing Carbon	445
14.4.1	Natural Carbon Sinks	445
14.4.2	Carbon Capture and Storage	446
14.4.3	Mineral Carbonation	447
14.4.4	Alternative Engineered CCS Systems	447
14.5	Adapting to Climate Change	447
14.5.1	Engineering Structures and Subsoil	448
14.5.2	Mass Movements	448
14.5.3	Coastal Protection	449
14.5.4	Flood Protection	450
14.5.5	Water Supply	450
14.5.6	Ecosystems, Biodiversity and Species Extinction	452
14.6	Urban Transition	454
14.7	Utopias	456
14.7.1	Towers	457
14.7.2	Tunnels	458
14.7.3	Dykes	459
14.7.4	Islands	461
14.8	Responsibility	464
14.9	Key Messages and Outlook	465
14.10	Reading Recommendations	465

Part IV Appendix

15	Annex I: Solutions to the Exercises	469
15.1	Introduction	469
15.2	Geological Principles	469
15.3	Mechanical Principles	469
15.4	Principles of Uncertainty	470
15.5	Introduction to Site Investigation	473
15.6	Preliminary Investigation	473
15.7	Main Investigation	473
15.8	Accompanying Investigation	473
15.9	Follow-Up Investigation	473
15.10	Mass Movements	473

15.11	Subsidence	474
15.12	Engineering Structures	476
15.13	Contaminated Sites and Waste Disposal	478
15.14	New Fields and Horizons	479
16	Annex II: Reliability-Based Design	481
16.1	Uncertainty and Safety	481
16.2	The Probabilistic Safety Concept	481
16.3	The First-Order Second-Moment Method	482
16.4	Geotechnical Application	483
16.5	Reading Recommendations	486
	References	487
