	Robert Adol'fovich Minlos – His Work and Legacy	1
1	A Gibbs point process of diffusions: Existence and uniqueness <i>Alexander Zass</i>	13
1	Introduction and set-up.	13
2	Gibbsian formalism for marked point processes	14
3	Existence of an infinite-volume Gibbs point process via the entropy method	17
4	Uniqueness of Gibbs measure via cluster expansion	20
	Bibliography	22
2	Trotter product formula on Hilbert and Banach spaces for operator- norm convergence <i>Valentin Zagrebnov</i>	23
1	Introduction	23
2	Trotter product formula on Hilbert spaces	24
3	Trotter product formula on Banach spaces	26
4	Example of sharpness	31
	Bibliography	33

3	Semi-recursive algorithm of piecewise linear approximation of two-dimensional function by the method of worst segment dividing	35
	<i>Hayk Sukiasyan and Tatev Melkonyan</i>	
1	Introduction	35
2	Delaunay triangulation	36
3	The method of dividing the worst segment	37
4	Semi-recursive algorithm	40
5	Applications to mathematical physics.	43
	Bibliography	43
4	Pinned Gibbs processes	45
	<i>Mathias Rafler</i>	
1	Pinning Gibbs processes	45
2	Transformations and invariance.	46
3	Integration by parts	47
4	Applications.	52
	Bibliography	53
5	Construction of limiting Gibbs processes and the uniqueness of Gibbs processes	55
	<i>Suren Poghosyan and Hans Zessin</i>	
1	Preliminaries	55
2	Algebraic approach	57
3	Ursell kernel	58
4	Limiting Gibbs processes	60
5	Uniqueness	62
	Bibliography	64
6	Non-local convolution type parabolic equations with fractional and regular time derivative	65
	<i>Andrey Piatnitski and Elena Zhizhina</i>	
1	Introduction	65

2	Convolution type operators	67
3	Non-local parabolic problem	67
4	Asymptotics of $v(x, t)$ as $t \rightarrow \infty$	69
5	Time fractional equations	73
6	Conclusions.	75
	Bibliography	76
7	Large emissions. Hawking-Penrose black hole model	77
	<i>Eugeny Pechersky, Sergei Pirogov and Anatoly Yambartsev</i>	
1	Introduction	77
2	General settings	78
3	Hawking-Penrose black hole.	83
	Bibliography	86
8	On an approximation of 2-D stochastic Navier-Stokes equations	87
	<i>Sara Mazzonetto</i>	
1	Introduction	87
2	Stochastic Navier-Stokes equations 2-D	88
3	The approximation scheme	91
	Bibliography	95
9	When bounded chaos becomes unbounded	97
	<i>Alexander Lykov and Vadim Malyshev</i>	
1	Introduction	97
2	l_2 initial conditions	99
3	l_∞ initial conditions	102
	Bibliography	106
10	On direct and inverse problems in the description of lattice random fields	107
	<i>Linda Khachatryan and Boris Nahapetian</i>	
1	Introduction	107
2	Preliminaries	109

3	Kolmogorov's system	110
4	Systems of probability distributions parameterised by boundary conditions	110
	Bibliography	116
11	The peak model for finite rank supersingular perturbations	117
	<i>Rytis Juršėnas</i>	
1	Introduction	117
2	The peak model versus A-model	118
3	Transformation preserving the Weyl function	123
	Bibliography	125
12	Mayer expansion for the Asakura-Oosawa model of colloid theory	127
	<i>Sabine Jansen and Dimitrios Tsagkarogiannis</i>	
1	The Asakura-Oosawa model. Depletion attraction	127
2	Cluster expansion	129
3	Proof ideas	131
	Bibliography	134
13	Virial inversion for inhomogeneous systems	135
	<i>Sabine Jansen, Tobias Kuna and Dimitrios Tsagkarogiannis</i>	
1	Introduction	135
2	Main theorem	136
	Bibliography	143
14	Activity expansions for Gibbs correlation functions	145
	<i>Sabine Jansen and Leonid Kolesnikov</i>	
1	Introduction	145
2	The setting: Definitions and notations	146
3	Preparations	147
4	Main results.	150
	Bibliography	153

15	Phase separation and sharp large deviations	155
	<i>Ostap Hryniv and Clare Wallace</i>	
1	Introduction	155
2	Model	156
3	Sketch of the proof	160
	Bibliography	164
16	Numerical study for the phase transition of the area-interaction model	165
	<i>Pierre Houdebert</i>	
1	Introduction	165
2	Preliminaries	167
3	Theoretical results	169
4	Numerical study of the phase diagram	170
	Bibliography	173
17	Zero-range hamiltonians for three quantum particles	175
	<i>Rodolfo Figari and Alessandro Teta</i>	
1	Introduction	175
2	Minlos and Faddeev seminal papers	180
3	On the negative eigenvalues.	181
	Bibliography	183
18	3-D incompressible Navier-Stokes equations: Complex blow-up and related real flows	185
	<i>Carlo Boldrighini, Sandro Frigio, Pierluigi Maponi, Alessandro Pellegrinotti and Yakov G. Sinai</i>	
1	Introduction	186
2	The Li-Sinai approach	187
3	Results of computer simulations	191
4	Concluding remarks	193
	Bibliography	194
