Preface — VII

Acknowledgment — IX

Introduction — 1

## **1 From particle dynamics to the Boltzmann equation — 3**

1.1 *N*-Particle dynamics and modeling of rarefied gases — 3

1.2 Distribution functions and the Liouville equation — 4

1.3 BBGKY-hierarchy — 7

1.4 The two-body problem and pair collisions — 11

1.5 Scattering cross-section — 13

1.6 Hard spheres and the Boltzmann–Grad limit — 17

Remarks on Chapter 1 — 21

## **2 The Boltzmann equation — 23**

2.1 The Boltzmann equation for hard spheres and its generalizations — 23

2.2 Basic properties of the Boltzmann equation — 28

2.3 Spatially homogeneous problem — 30

2.4 Collisional kernels — 32

2.5 Boltzmann equations for gas mixtures — 34

Remarks on Chapter 2 — 36

## **3 Maxwell molecules and the Fourier transform — 37**

3.1 Maxwell molecules — 37

3.2 Fourier transform of the Boltzmann equation — 39

3.3 The spatially homogeneous Boltzmann equation for Maxwell molecules — 41

3.4 Invariant transformations — 49

3.5 Linearized collision operator — 50

3.6 Eigenfunctions and eigenvalues — 55

3.7 General solution of the linearized equation — 59

3.8 Equations for moments — 66

3.8.1 Appendix A. Spherical functions, the Wigner–Eckart theorem, and evaluation of some integrals — 72

Remarks on Chapter 3 — 79

## **4 Radial solutions — 81**

4.1 Equation for characteristic function  $\varphi(|k|, t)$  — 81

4.2 Equations for moments — 82

4.3	Distribution functions with Maxwellian tails —	<b>84</b>
4.4	Analytic properties of isotropic characteristic functions; entire functions of exponential type —	<b>86</b>
4.5	Solution of the Cauchy problem —	<b>87</b>
4.6	Stationary and self-similar solutions —	<b>92</b>
4.7	Distribution functions —	<b>98</b>
4.8	Exact solutions —	<b>102</b>
	Remarks on Chapter 4 —	<b>107</b>
<b>5</b>	<b>Asymptotic problems —</b>	<b>109</b>
5.1	Formation of Maxwellian tails —	<b>109</b>
5.2	Refined estimates of the normalized moments and the tail temperature —	<b>113</b>
5.3	Application of complex Fourier transform —	<b>118</b>
5.4	The general approach to the large time asymptotic problem —	<b>121</b>
5.5	Convergence to equilibrium —	<b>127</b>
5.6	Slow relaxation of solutions with power-like tails —	<b>131</b>
5.7	A class of solutions with infinite second moment —	<b>137</b>
5.8	Exact self-similar solutions —	<b>144</b>
	Remarks on Chapter 5 —	<b>149</b>
<b>6</b>	<b>Generalized Maxwell models —</b>	<b>151</b>
6.1	The Boltzmann equation for inelastic interactions —	<b>151</b>
6.2	Inelastic Maxwell model —	<b>153</b>
6.3	One-dimensional model and its exact self-similar solution —	<b>156</b>
6.4	Self-similar solutions to the three-dimensional inelastic Maxwell model —	<b>161</b>
6.5	Uniqueness of the self-similar profile —	<b>167</b>
6.6	Asymptotic property of self-similar solutions —	<b>171</b>
6.7	Distribution functions and power-like tails —	<b>175</b>
6.8	Multi-linear Maxwell models —	<b>179</b>
6.9	Self-similar asymptotics —	<b>186</b>
6.10	Other applications of Fourier transform to the Boltzmann equation —	<b>190</b>
	Remarks on Chapter 6 —	<b>194</b>
<b>7</b>	<b>Boltzmann equation and hydrodynamics beyond Navier–Stokes —</b>	<b>195</b>
7.1	Boltzmann equation for small Knudsen numbers —	<b>195</b>
7.2	Hilbert and Chapman–Enskog methods —	<b>197</b>
7.3	Navier–Stokes equations —	<b>202</b>
7.4	Burnett equations —	<b>206</b>
7.5	Ill-posedness of Burnett equations —	<b>210</b>

7.6	General method of regularization —	212
7.7	Linearized problem —	214
7.8	Asymptotic expansion for small Knudsen numbers —	217
7.9	Accuracy of equations of hydrodynamics and connection with the Chapman–Enskog expansion —	220
7.10	The non-linear case: generalized Burnett equations —	224
7.11	Hyperbolicity and stability of GBEs —	228
7.12	Concluding remarks —	233
