

Contents

1	Introduction — 1
2	Materials — 5
2.1	Inorganic materials — 6
2.1.1	Silicon — 6
2.1.1.1	Physical and chemical properties — 7
2.1.1.2	Silicon in microfluidics — 7
2.1.2	Glass in optomicrofluidics — 9
2.1.2.1	Physical and chemical properties — 9
2.1.2.2	Glasses in microfluidics — 12
2.2	Polymers — 12
2.2.1	Role of polymer composition — 14
2.2.2	Role of thermal response in polymers — 14
2.2.3	Role of structural order – molecular arrangement — 14
2.2.4	Elastomers: PDMS — 15
2.2.5	Thermoplastics: poly(methyl methacrylate), PC, PVC cyclic block copolymer — 16
2.2.6	Thermosets: SU-8 photoresist and polyimide — 17
2.2.7	Smart polymers: hydrogels — 17
2.2.8	General properties of polymers in microfluidics — 20
2.3	Paper — 22
2.4	Comparisons — 22
2.5	Smart materials — 22
2.5.1	Shape memory materials — 24
2.5.1.1	Shape memory alloys (SMAs) — 24
2.5.1.2	Shape memory polymers (SMPs) — 24
2.5.2	Smart fluids — 25
2.5.2.1	Magnetorheological fluids — 25
2.5.2.2	Electrorheological fluids — 26
2.5.3	Magnetostrictive materials — 26
2.5.4	Electrostrictive — 27
2.5.4.1	Piezoelectric versus electrostrictive materials — 27
2.5.5	Chromogenic materials — 27
2.5.5.1	Thermochromic — 27
2.5.5.2	Photochromic — 28
2.5.5.3	Electrochromic — 28
2.5.5.4	Piezochromic (piezochromic luminescence) — 28
2.5.5.5	Magnetochromic — 29
2.6	Quantum dots (QD) — 30

2.7	Nanowires —	30
2.8	Conclusion —	31
3	Materials fabrication and patterning techniques —	34
3.1	Fabrication techniques in optomicrofluidics: film deposition —	35
3.1.1	Evaporation —	35
3.1.2	Sputtering techniques —	36
3.1.3	Chemical vapor deposition and plasma-enhanced chemical vapor deposition – PECVD —	38
3.1.4	Comparisons —	42
3.1.5	Sol-gel coating —	42
3.1.6	Epitaxial growth and heteroepitaxial growth —	44
3.2	Fabrication techniques: local modification of bulk material properties —	45
3.2.1	Thermal diffusion —	45
3.2.2	Ion exchange —	47
3.3	Material implantation and irradiation —	48
3.3.1	Ion implantation —	48
3.3.1.1	Ion implantation: effects on the optical properties —	50
3.3.1.2	Ion implantation: 1D and 2D geometries —	52
3.3.2	Irradiation and photolocking —	52
3.4	Patterning techniques —	53
3.4.1	Photolithography —	54
3.4.2	Replication —	56
3.4.3	Replica molding —	57
4	Photonics —	60
4.1	Basics of waveguiding —	60
4.2	Characterization of optical waveguide-based devices —	69
4.3	Types of waveguides —	74
4.4	Types of optical fibers —	76
4.5	Active photonic devices —	78
4.5.1	Light-emitting diodes —	78
4.5.2	Detectors —	81
4.5.3	Image sensors —	87
4.5.4	Semiconductor lasers —	90
5	Fluidics and fluid control systems —	94
5.1	Valve basics —	94
5.2	Introduction to fluidic mechanics —	97
5.3	Theory of fluid control elements in systems —	101
5.4	Rating and selection of control valves —	103

5.4.1	Introduction and definition of terms —	103
5.4.2	Valve characteristic —	106
5.4.3	Flow characteristic and range ability —	107
5.4.4	Operating characteristic and pressure ratio —	108
5.4.5	Rating and selection of control valves for fluid control systems —	109
5.5	Microvalves —	113

6 Sensors for optofluidic systems — 117

6.1	Process sensors —	117
6.1.1	Temperature sensors —	117
6.1.2	Pressure sensors —	125
6.1.3	Flow sensors —	127
6.1.4	Level sensors —	132
6.2	Process analytical sensors —	136
6.2.1	The added-value concept —	136
6.2.2	Taxonomy —	138
6.2.3	Process analyzer categories —	140
6.3	Spectroscopic In-line monitoring —	152
6.3.1	Industry relevance —	152
6.3.2	The interaction of radiation with matter —	153
6.3.3	UV-vis spectroscopy —	155
6.3.4	Flow chemistry applications with UV/Vis spectroscopy —	167
6.3.5	Fluorescence spectroscopy —	171
6.3.6	Infrared spectroscopy —	185
6.3.7	Spectrometer components and designs —	199
6.3.8	Raman spectroscopy —	236
6.4	Multivariate data analysis —	246

7 Outlook — 262

8 Glossary of optofluidic terms and definitions — 264

9 Chemical resistance properties of materials — 279

International standards and regulations — 283

Index — 297
