Preface — VII

1	<i>p</i>-Adic analysis: a quick introduction — 1
1.1	Introduction — 1
1.2	<i>p</i> -Adic numbers: essential facts — 1
1.2.1	Basic facts — 1
1.2.2	The field of <i>p</i> -adic numbers — 3
1.2.3	Topology of $\mathbb{Q}_p$ — 6
1.2.4	The <i>n</i> -dimensional <i>p</i> -adic space — 8
1.3	Integration in $\mathbb{Q}_p^n$ — 9
1.3.1	Measure theory: a basic dictionary — 9
1.3.2	The Haar measure — 10
1.3.3	Integration of locally constant functions — 12
1.3.4	Integration of continuous functions with compact support — 13
1.3.5	The change of variables formula in dimension one — 16
1.3.6	Improper integrals — 19
1.3.7	Further remarks on integrals of continuous functions with compact support — 19
1.4	Change of variables formula — 21
1.5	Additive characters — 25
1.6	Fourier analysis on $\mathbb{Q}_p^n$ — 28
1.6.1	Some function spaces — 28
1.6.2	The Fourier transform — 29
1.6.3	The Fourier transform on the space of test functions — 32
1.6.4	The inverse Fourier transform — 34
1.7	The L^2 -theory — 37
1.8	$\mathcal{D}$ as a topological vector space — 40
1.9	The space of distributions on $\mathbb{Q}_p^n$ — 41
1.10	The Fourier transform in $\mathcal{D}'$ — 43
1.11	Operations on distributions — 47
2	<i>p</i>-Adic heat equations and ultrametric diffusion — 54
2.1	Introduction — 54
2.2	The Taibleson–Vladimirov operator and the <i>p</i> -adic heat equation — 54
2.3	The heat kernel — 55
2.4	The spaces $\mathfrak{M}_\lambda$ and pseudo-differentiability of the heat kernel — 57
2.5	The Cauchy problem for the multidimensional <i>p</i> -adic heat equation — 64
2.6	Elliptic pseudo-differential operators and the Taibleson–Vladimirov operator — 73
2.7	Markov processes, Feller semigroups, and <i>p</i> -adic heat equations — 74

2.7.1 Markov processes and Heat kernels — 77

3 Fundamental solutions and local zeta functions — 81

3.1 Introduction — 81

3.2 Implicit function theorems on $\mathbb{Q}_p^n$ — 81

3.3 The Igusa local zeta functions — 83

3.3.1 Poincaré series and congruences modulo p^m — 85

3.3.2 The stationary phase formula — 87

3.3.3 Singular points of hypersurfaces — 89

3.3.4 Quasihomogenous singularities — 92

3.4 The method of analytic continuation of Gel'fand–Shilov — 94

3.5 Fundamental solutions for pseudo-differential operators — 95

3.6 Fundamental solutions for quasielliptic pseudo-differential operators — 97

4 Riesz kernels and pseudo-differential operators attached to quadratic forms — 102

4.1 Introduction — 102

4.2 Preliminaries — 102

4.2.1 The Hilbert symbol — 103

4.2.2 The Weil constant — 103

4.2.3 Twisted local zeta functions — 105

4.2.4 Functional equations — 106

4.2.5 Some explicit functional equations — 107

4.3 Riesz kernels and Lizorkin spaces of the second kind — 109

4.3.1 Riesz kernels — 110

4.3.2 Lizorkin spaces of second kind — 113

4.3.3 The Riesz kernels form an Abelian group — 114

4.4 Pseudo-differential operators and fundamental solutions — 116

5 Sobolev-type spaces and pseudo-differential evolution equations — 120

5.1 Introduction — 120

5.2 The spaces $\mathcal{H}_\infty, \mathcal{H}_s$ — 120

5.2.1 Sobolev-type spaces — 123

5.2.2 The dual space of $\mathcal{H}_\infty$ — 125

5.3 Pseudo-differential operators acting on $\mathcal{H}_\infty(\mathbb{C})$ — 126

5.4 Taibleson–Vladimirov operators acting on Sobolev-type spaces — 129

5.5 Semigroups of linear operators — 131

5.6 Mild solutions — 133

5.7 Classical solutions — 137

5.8 Local well-posedness of the p -adic Nagumo type equations — 138

List of Symbols — 141

Bibliography — 143

Index — 147
