

Contents

I Energy, Evolution and Medicine

1	Energy and Body	3
1.1	The Pfühlbach and the Dispute.....	5
1.2	Of Reservoirs and Bicycle Dynamos.....	6
1.3	Stories of Thermos Flasks.....	7
1.4	What is Vital Force?.....	7
1.5	The Human Body—An Open System	9
1.6	CAEN ("Controllable Amount of Energy") or How Much Energy Does the Body Need?	12
1.7	The Big Three	15
1.8	Why We Store Energy—Fever, Tour de France and Newborns	15
1.9	How Much Energy Do We and Our Ancestor Australopithecus Store?.....	18
1.10	Sweet Tooth—Brain, Muscles, and Immune System	21
1.11	Food Search Prior to Energy Storage	22
1.12	Neuronal Factors and Hormones of Energy Storage	23
1.13	A Little Lesson on Stress Hormones	26
1.14	A Brief Lesson on Immune Messengers	27
1.15	Stress Hormones and Cytokines Release Energy	27
1.16	A New Look at the CAEN ("Controllable Amount of Energy").....	31
	References	33
2	Evolutionary Medicine	35
2.1	Darwin, Wallace & Co.—Simultaneity of a Discovery.....	36
2.2	Darwinian Evolution—Species and Selection.....	37
2.3	Darwinian Evolution—Modern Additions	38
2.4	Chickens from Behind	39
2.5	Founder Effect in Canada, Lactose Intolerance and Fat Babies.....	42
2.6	The Selfish Brain.....	44
2.7	The Selfish Immune System	46
2.8	When Two Fight	47
	References	49
3	Brain and Immune System—Two Competing Realms	51
3.1	Energy Release—Competing Role of Brain and Immune System.....	52
3.2	Energy Release—Mutual Immediate Assistance	54
3.3	Energy Storage—Memory Function of Brain and Immune System.....	55
	References	60

II Energy Expenditure in the Spotlight

4	Inflammation and Energy	63
4.1	Historical Definition of Inflammation	64
4.2	Inflammation Strength: Rose Thorn, Rheumatism, and Sepsis	65

4.3	Inflammation Causes Increased Energy Expenditure.....	67
	References	72
5	Pain and Energy	73
5.1	The Pain Receptors and Pain Stabilization	74
5.2	Inflammation Causes Pain—The Sixth Sense	75
5.3	When the Muscle Becomes Acidic, It Hurts	76
5.4	Heat, Cold, and Pepper—Where Does It Reach the Brain?	76
5.5	Acute and Chronic Pain	77
5.6	Electric Shock, Pain, and Energy Expenditure.....	78
5.7	Heat, Cold and Energy Expenditure	79
	References	80
6	Psychological Stress and Energy	83
6.1	What is Stress?	84
6.2	Acute Stress—Sport as a Model	84
6.3	Chronic Stress is Unhealthy	85
6.4	Chronic Stress at Work	86
6.5	Stressful Double Hits	87
6.6	Psychological Stress Causes Increased Energy Expenditure.....	87
6.7	Dementia and Heart Disease Increase Energy Expenditure	88
	References	89
7	Other Energy-Consuming Situations	91
7.1	Sleep Problems—Sleep Apnea	92
7.2	Chronic Smoldering Infections	92
7.3	Fear and Anxiety	94
7.4	6 Cigarettes per Day.....	95
	References	96
8	What Does Increased Energy Expenditure Mean for the Body?	99
8.1	Energy Expenditure in Aging.....	101
8.2	Energy Expenditure is Hereditary.....	103
8.3	Energy Situation During Aging with Additional Energy Expenditures.....	104
	References	107

III From Energy and Evolution to Symptom

9	Daytime Fatigue and Depression	111
9.1	Sickness Behavior in Chronic Inflammatory Disease	112
9.2	Daytime Fatigue and Depression in Old Age	114
	References	115
10	Sleep Disorders and Circadian Symptoms	117
10.1	How can Sleep be Studied?.....	118
10.2	Sleep and Circadian Rhythms in Chronic Inflammatory Diseases.....	119
10.3	Circadian Rhythm of Inflammation	120
10.4	Sleep Problems in Old Age	123
	References	124

11	Loss of Appetite, Malnutrition, and Undernutrition	125
11.1	Appetite and Chronic Inflammation	126
11.2	Anorexia of Aging	127
	References	128
12	Muscle Loss	129
12.1	Muscle Loss and Chronic Inflammation	130
12.2	Detour: Nutrition and Chronic Inflammation	132
12.3	Muscle Mass Decreases with Age	132
	References	135
13	Bone Loss—Osteoporosis	137
13.1	Bone Loss and Chronic Inflammation	138
13.2	Bone Loss in Old Age	140
	References	141
14	Weight Changes (Increase and Decrease)	143
14.1	Weight and Chronic Inflammation	144
14.2	Weight During Aging	144
	References	154
15	The Storage Hormone Insulin Doesn't Work—Insulin Resistance	157
15.1	Antoinin Sulin in Resistance	158
15.2	Storage in Chronic Inflammation—Role of Insulin	158
15.3	Insulin Resistance in Aging	159
	References	161
16	Decreasing Libido, Lower Fertility	163
16.1	Sex and Chronic Inflammation	164
16.2	Of Antechinus, Sea Elephants, and Macaques	165
16.3	Estrogens and Chronic Inflammation	166
16.4	Hormones in Old Age	167
	References	168
17	Sympathetic Nervous System Fires and Causes High Blood Pressure	169
17.1	Cortisol and Inflammation	170
17.2	Cooperation of Stress Hormones and Consequence in Chronic Inflammation	171
17.3	Sympathetic Nervous System and Aging	173
17.4	Low Activity of the Parasympathetic Nervous System	173
	References	175
18	Increased Blood Clotting—Thrombosis/Embolism	177
18.1	Coagulation Explained: Lampreys, Sea Squirts, Fugu, and Humans	178
18.2	Coagulation and Inflammation	180
18.3	Increased Coagulation in Chronic Inflammation	181
18.4	Acceleration of Coagulation in Old Age	182
	References	182
19	Stress Worsens Inflammation, and Inflammation Alters Stress Tolerance	185
19.1	Stress and Factor X Constitute a Double Hit	186
19.2	Anti-Stress Therapies	187

19.3	Stress in the Elderly	188
	References	190

IV The Big Summary

20	The Synthesis	195
20.1	Addition of Energy Forms and Unwanted Energy Expenditure.	196
20.2	What are Telomeres?	198
20.3	Inflammation, Cell Turnover and Telomere Length	199
20.4	Chronic Inflammation and Telomere Length	199
20.5	Pain, Stress and Telomere Length	200
20.6	Anxiety, Smoking, and Telomere Length	201
20.7	Conclusion	202
	References	202

Supplementary Information

Appendix	206
