

1	Waveguides	1
1.1	Introduction	1
1.1.1	Brief Summary of the TEM Wave	3
1.1.2	Field Theory for Waveguides	4
1.2	Graphical Derivation of the H_{10} -Wave	4
1.2.1	Boundary Conditions on the Ideal Conductor	4
1.2.2	Reflection of a HPW on a Metallic Plate	5
1.2.3	Construction of the H_{10} -Wave from Multiple Reflections	6
1.2.4	Field Images of the H_{10} -Wave in the Rectangular Waveguide	6
1.3	Waveguide Wavelength	9
1.4	Phase and Group Velocity	11
1.5	General Field Wave Impedance and Field Wave Impedances of the H_{10} -wave	13
1.6	Propagation Coefficient and Characteristic Impedance of the H_{10} -Wave Over the Frequency	13
1.7	Current Distribution in Rectangular Waveguide	14
1.8	Higher Modes in the Rectangular Waveguide	16
1.9	Round Waveguide and Coaxial Conductor Modes	19
1.10	Waveguide to Coaxial Transition with Adapter	22
1.11	Transmission Resonator	22
1.12	Frequency Bands for Rectangular Waveguides	25
2	Fundamentals of Field Simulation	29
2.1	Free Space Simulation	29
2.1.1	Transmitter and the Receivers	30
2.1.2	Reflection on Objects	32
2.1.3	Diffraction and Penetration of Objects	34
2.1.4	Procedures and Products	36
2.2	Numerical Field Simulation	38
2.2.1	General Solution of Maxwell's Equations	39

2.2.2	Solutions of Maxwell's Equations for Source-Free Geometries	41
2.2.3	Finite Difference Method (FD)	42
2.2.3.1	Euler's Method	42
2.2.3.2	Example for General Potential Function $u_{(x,v)}$	43
2.2.4	Finite Element (FE) Method	46
2.2.5	FE Simulation Process	49
2.2.6	Method of Moments (MoM)	54
3	Fundamentals of Nonlinear RF Technology	57
3.1	Classes of Nonlinearities in the Microwave Range	57
3.2	Description Forms for Components	59
3.3	Frequency Generation by Nonlinearities	61
3.4	Nonlinear Phenomena	63
3.5	Nonlinear Components	67
3.5.1	Nonlinear Conductance and Resistance	67
3.5.2	Nonlinear Capacitances	69
3.6	Overview: Simulation Methods for Nonlinear Components	71
3.7	Derivation of the Harmonic Balance Method for Large-Signal Single Tones	73
3.8	Introduction to Scattering Parameters for Mixed-Frequency Measurements	79
3.8.1	S-Parameters for Mixed-Frequency Networks	85
3.8.2	Vector Intermodulation Measurements	89
3.8.3	X-Parameters	93
3.8.4	Relationship Between the X-Parameters and the Mixed-Frequency-S-Parameters	96
3.9	The Harmonic Transfer Function using MF S-Parameters in Localization	96
3.9.1	Cooperative Localization Using Nonlinear Backscatter Tag and Stepped Frequency Harmonic Radar	97
3.9.2	The HR Equation and HR Transfer Function	100
3.9.3	Range Determination with a Stepped Frequency Harmonic Radar with Nonlinear Backscatter Tag	104
3.9.4	Cooperative Localization Using Harmonic Radar for the Example of a Sea Rescue System	106
3.10	Coherent Mixed-Frequency Measurement Technology as the Basic Technology	113
4	Power Amplifier	115
4.1	Basics for the Development of Power Amplifiers	117
4.1.1	Transistor Technology	117
4.1.2	The Signal Flow Method and its Application	120
4.1.3	Performance Terms	122
4.1.4	Further Basic Terms	124

4.1.5	Stability	126
4.1.6	Selection of the Load Impedance	126
4.1.7	Design and Application of a Manual Tuner	131
4.1.8	Selecting the Drain Coil	134
4.2	The Classic Operating Modes A, AB, B, and C	135
4.3	Circuit Concepts of Power Amplifiers	142
4.3.1	Class H Mode	142
4.3.2	Class F Mode	143
4.3.3	Class D Mode	145
4.3.4	Class E Mode	148
4.3.5	Class J and Other Amplifiers with Harmonic Matching	150
4.3.6	Class S Mode	152
4.4	Combining of Power Amplifiers	154
4.4.1	0°-Couple Power Combiner	154
4.4.2	The Doherty Amplifier	155
4.4.3	The Push-Pull Amplifier	157
4.4.4	The Balanced Amplifier	157
4.5	Linearization Techniques for Power Amplifiers	159
4.5.1	Direct Feedback	160
4.5.2	Predistortion	161
4.5.3	Feedforward	162
4.5.4	Indirect Feedback	163
4.5.5	Cartesian Loop	164
4.5.6	Polar Loop	165
4.6	Frequency Multiplier	165
5	Oscillators	167
5.1	Two-Port Oscillators	169
5.1.1	The Oscillation Condition	169
5.2	Construction of a Backward RF Oscillator	173
5.2.1	Cross-Coupled and Colpitts Oscillator	174
5.3	One-Port Oscillators	177
5.3.1	Oscillation Condition of One-Port Oscillators	177
5.3.2	Used Reflection Amplifier	179
5.3.3	Setups of Differential Oscillators	179
5.3.4	Push-Push-Oscillators	182
5.3.5	Electrically Tuneable Oscillators	184
5.4	Noise Behavior of Oscillators	185
6	Detectors and Mixers	189
6.1	Detectors	189
6.2	The Superhet or Superheterodyne Principle	191
6.3	Basics of Frequency Conversion with Mixers	191
6.4	Parametric Calculation	195
6.5	Conductance Elements of Schottky Diodes	199

6.6	Downward Mixing with Schottky Diode	200
6.7	Noise Behavior of the Mixer	201
6.8	Performance Parameters of Mixers	202
6.9	Realization of Mixers with Schottky Diodes	204
6.9.1	Single Sideband Converters and IQ Modulators	208
7	Phase-Locked Loops and Synthesis Generators	213
7.1	Basics of Phase-Locked Loops	213
7.2	Control Behavior	215
7.3	Frequency Divider	218
7.4	Discriminators	219
7.4.1	Phase Discriminators	219
7.4.2	Phase-Frequency-Discriminators	221
7.4.3	Design of Loop Filters	222
7.5	Single-Loop Control Circuit	223
7.6	Control Loop with Mixer	225
7.7	Multi-Loop Control Loops	226
7.8	Control Loops with Fractional Dividers	227
7.8.1	$\Sigma\Delta$ -Fractional-N Synthesizer Generator	229
7.8.2	Direct Digital Modulation	230
8	Technically Generated GHz-Plasma and Applications	231
8.1	Basics of Technically Generated Plasmas	231
8.2	Low-Pressure Plasmas	240
8.2.1	Low-Pressure Lamps	243
8.3	High-Pressure Plasmas	244
8.3.1	Classic Spark Plug	245
8.4	Corona Plasmas	246
8.5	Microwave Plasmas	247
8.5.1	Theory of the Three-Stage Transformation	248
8.5.2	Processor-Based Control Electronics for Microwave Plasmas	250
8.5.3	Control Electronics Using an Amplitude-Locked Loop Circuit	252
8.5.4	Microwave Spark Plug	255
8.5.5	Lamp Technology	259
8.5.6	GHz Plasma Jets	262
8.5.7	MW Surgery	267
8.5.8	GHz Plasma Technology as Basic Technology	269
8.5.9	Decoupled GHz Plasma Technology for Furnaces and other Applications	270
9	Basic Concepts of Antenna Theory	273
9.1	Introduction in the Antenna Technology	274
9.2	Short Introduction to Radar Technology	276
9.2.1	Radar Equation	276

9.2.2	Basic Principle of Radar Technology	278
9.2.3	Radar Frequencies	280
9.3	The Field of an Elementary Emitter	281
9.3.1	Electric Elementary Emitter	281
9.3.2	Magnetic Elementary Emitter	287
9.4	The Far Field of an Arbitrary Current Distribution in Free Space ...	288
9.5	The Equivalence Principle (Huygen's Principle)	293
9.6	Relationship Between Aperture Assignment and Directional Characteristic for Area Antennas	296
9.7	Characteristics of an Antenna	309
9.7.1	Polarization of the Free-Space Wave	309
9.7.2	Characteristics of an Antenna for the Transmission Case ...	312
9.7.3	Characteristics of an Antenna for the Receiving Case	315
9.7.4	The Reciprocity Theorem	318

10 Phase-Controlled Antennas, Patch Antennas, Measurement

Technology	321
10.1 Basic Procedure for Phased Array Antennas	321
10.2 The Directional Characteristic of a Phased Array Antenna	322
10.3 Characteristics of a Phased Array Antenna	327
10.4 Discretization Error with a Phased Array Antenna	328
10.5 Patch Antennas	332
10.5.1 Design of the Patch Antenna	332
10.5.2 Radiation Fields of the Patch Antenna	335
10.6 Array of Patch Antennas	338
10.6.1 Linear Patch Array with Lambda-Quarter Spacing	339
10.6.2 Linearly Arranged Patch Array with Lambda-Half Spacing .	341
10.6.3 Linearly Arranged Patch Array with Three-Lambda Quarter Spacing	341
10.6.4 Tapped Arranged Patch Array	342
10.7 Phase-Controlled Receiving Antennas	345
10.8 Antenna Measurement Technology	345
10.8.1 The Measuring Device	345

11 Scattering of Electromagnetic Waves at Radar Targets

11.1 General Consideration of the Scattering on a Single Radar Target ..	349
11.2 Calculation of the Radar Cross-Section of Metallic Objects	353
11.2.1 Reflection at Incidence of a Plane Homogeneous Wave on a Conducting Plane Plate	357
11.2.2 Reflection on the Front of a Metallic Sphere	360
11.3 Scattering by Dielectric Bodies that are Small Against the Wavelength (Rayleigh Scattering)	362
11.4 Reflection on a Conducting Half-Plane	365
11.5 Dependence of the Radar Cross-Section on the Frequency and the Aspect Angle	367

11.6 Volumetric Meteorological Radar Targets	369
List of Frequently used Formula Symbols and Abbreviations	373
References	379
