

Part I Algebraic Structures

1 Rings	3
1.1 Elementary Definitions and Examples	3
1.2 Some Structure Theory for Rings	9
1.3 Special Classes of Rings	13
2 Modules	25
2.1 Structure Theory of Modules	25
2.2 Applications to Linear Mappings	43
3 Multilinear Algebra	55
3.1 Tensor Products	55
3.2 Tensor Algebras	71
3.3 Symmetric and Exterior Algebras	75
4 Pattern Recognition	91
4.1 Universal Algebra	91
4.2 Naive Category Theory	97
4.3 Categorical Constructions: Limits	108
4.4 Adjoint Functors	121

Part II Local Structures

5 Sheaves	139
5.1 Presheaves and Sheaves	139
5.2 Étale Spaces	153
5.3 Ringed Spaces	160
5.4 Module Sheaves	166
6 Manifolds	171
6.1 Charts and Parametrizations	172
6.2 Tangent Spaces and Derivatives	182
6.3 Tangent and Tensor Bundles	193
6.4 Differential Forms	209
6.5 Integration on Real Manifolds	216
6.6 Applications to Complex Differentiability	229

7 Algebraic Varieties 239

7.1 Algebraic Sets 240

7.2 Algebraic Varieties 254

7.3 Schemes 266

Part III Outlook

8 Transfer of Arguments and Structures 279

8.1 Technologies of Structural Comparison..... 279

8.2 Group Objects and Group Actions 283

9 Specialization, Generalization and Unification of Structures 289

9.1 Special Tensors 289

9.2 Connections and Fiber Bundles 302

9.3 Structured Analysis? 313

References..... 319
