

1 Introduction 1

1.1 A (Brief) Historic Overview of Dynamic Flows 4

1.2 Thesis Contribution and Organization 9

2 Preliminaries 13

2.1 General Notation 13

2.2 Measure Theory 15

2.3 Topology 20

2.4 Two General Existence-Results 28

2.5 Graph Theory and Optimization 30

2.6 Complexity Theory 37

3 Model 41

3.1 Physical Model 41

3.1.1 Anonymous Edge Flows 42

3.1.2 Multi-Commodity Edge Flows 65

3.1.3 Network Flows 82

3.2 Behavioural Model 88

3.2.1 Instantaneous Dynamic Equilibria 89

3.2.2 Quality Measures for Dynamic Flows 95

3.3 Model Summary 101

3.4 Bibliographic Notes and Open Questions 103

4	Existence of IDE	105
4.1	A Meta-Theorem on IDE-Existence	105
4.2	Extension Lemma for General Inflow Rates	111
4.3	Extension-Lemmas using IDE-Thin Flows	118
4.3.1	IDE-Thin Flow Augmentation	129
4.3.2	IDE-Thin Flows via a Fixed Point Theorem	136
4.3.3	IDE-Thin Flows via Convex Optimization	140
4.4	Bibliographic Notes and Open Questions	146
5	Computational Complexity of IDE	149
5.1	Computing IDE-Thin Flows	150
5.1.1	Multi-Commodity Networks	150
5.1.2	Single-Commodity Networks	154
5.2	Bounding the Number of Extensions	163
5.2.1	Upper Bound for Single-Commodity Networks	163
5.2.2	Lower Bounds	176
5.3	NP-Hardness of IDE-Decision Problems	184
5.4	Bibliographic Notes and Open Questions	197
6	Quality of IDE	199
6.1	Upper Bounds	199
6.1.1	Acyclic Networks	200
6.1.2	General Single-Commodity Networks	211
6.2	Lower Bounds	224
6.2.1	Single-Commodity Networks	224
6.2.2	Multi-Commodity Networks	253
6.3	The Price of Anarchy	263
6.4	Bibliographic Notes and Open Questions	268
7	Conclusion	269
7.1	Summary and Comparison to Full Information Equilibria	269
7.2	Potential Directions for Future Research	271
	References	273
