

Contents

1. Introduction	1
1.1. Motivation	1
1.2. State of the Art	2
1.2.1. Massive MIMO using M ³ PA	3
1.2.2. Channel Modeling for M ³ PA	5
1.2.3. Single-Antenna-Element Beamforming	5
1.2.4. Optimization of Radiation for UAVs	7
1.2.5. JC&S with M ³ PA	7
1.3. Author's Contributions	9
1.4. Structure of the Dissertation	13
1.4.1. Massive MIMO using M ³ PA	13
1.4.2. Channel Modeling for M ³ PA	14
1.4.3. Single-Antenna-Element Beamforming	14
1.4.4. Optimization of Radiation for UAVs	15
1.4.5. JC&S with multi-mode multi-port antennas (M ³ PAAs)	15
 I. Theory	 17
 2. Fundamentals	 19
2.1. System Model	19
2.1.1. Baseband Representation of OFDM Systems	20
2.1.2. Multiple-Input Multiple-Output System Model	22
2.2. Antennas	24
2.2.1. Single-Port Antennas	26
2.2.2. Multi-Mode Multi-Port Antennas	27
2.2.3. Antenna Arrays	31
2.3. Channel Modeling	32
2.4. Gain of LoS Path Models	34

2.5. Channel Capacity and Spectral Efficiency	36
2.6. Channel State Information	37
2.7. Linear Precoding	38
2.8. Waterfilling Power Allocation	40
2.9. Chapter Summary	41
3. Massive MIMO using M³PA	43
3.1. Beamforming Architectures	43
3.2. Achievable Performance	46
3.3. Impact of Correlation using the Kronecker Model	48
3.4. Channel Hardening and User Scheduling	50
3.5. Chapter Summary	52
4. Channel Modeling for M³PA	55
4.1. Manifold Matrix	55
4.2. Position and Orientation Modeling	56
4.3. Polarization	59
4.4. LoS Path Model for UAVs employing M ³ PA	61
4.5. Chapter Summary	63
5. Single-Antenna-Element Beamforming	65
5.1. Objective Functions	66
5.2. Polarization Beamforming	66
5.2.1. Linear Polarization by Zero Forcing Precoding	67
5.2.2. Linear Polarization by Least Squares	68
5.2.3. Circular Polarization	69
5.3. Beamforming Architectures under Investigation	70
5.4. Single-Antenna-Element Beamforming Using M ³ PA-1	71
5.5. Polarization Beamforming Using M ³ PA-2	77
5.6. Chapter Summary	80
II. Application	81
6. Optimization of Radiation for UAVs	83
6.1. Omnidirectional Radiation for Aircraft Interrogators	83
6.1.1. Objective Functions	84

6.1.2.	Particle Swarm Optimization Using Norm Sphere	85
6.1.3.	Optimization of Vertical Polarization	87
6.1.4.	Numerical Results	87
6.2.	Single-Antenna-Element Beamforming Using M ³ PA-2	91
6.3.	Metrological Verification Using M ³ PA-2	92
6.4.	Evaluation of M ³ PA-3 for UAVs	95
6.4.1.	Numerical Results	96
6.4.2.	Metrological Verification	97
6.5.	Chapter Summary	98
7.	JC&S with M³PA	99
7.1.	System Model	100
7.1.1.	Example Protocol for Sensing and Communication	103
7.1.2.	Definition of the Radar Channel	104
7.1.3.	Definition of the Communication Signal	105
7.1.4.	Definition of the SNR	106
7.1.5.	Definition of the Channel Capacity	107
7.2.	Radar Signal Processing	107
7.2.1.	MIMO Radar	107
7.2.2.	CS with Beamforming	108
7.2.3.	Beamforming at the Receiver	109
7.2.4.	Sensing Algorithm	111
7.2.5.	Sensing Error	111
7.3.	Numerical Results	112
7.3.1.	Sensing Performance in Ideal Environment	113
7.3.2.	Sensing Performance in the Presence of Noise	115
7.3.3.	Sensing Performance while Suppressing Interference	116
7.3.4.	Communication Performance while Applying Polarization Beam- forming	117
7.4.	Chapter Summary	118
8.	Conclusions and Outlook	121
8.1.	Conclusions	121
8.2.	Outlook	123

Appendix	125
A. Notation	125
Glossary	125
Acronyms	128
List of Symbols	131
B. User-Scheduling Algorithms	137
B.1. Algorithms for Digital Beamforming	137
B.2. Algorithms for Hybrid Beamforming	138
B.3. Exemplary Algorithm	139
C. Scan Loss	141
D. Particle Swarm Optimization	143
E. Measurement Facilities and Setup	145
E.1. General Setup	145
E.2. Setup and Calibration of the SDR	146
E.3. Measurements with M ³ PA-2	150
E.4. Measurements with M ³ PA-3	152
F. Derivation of the Doppler Frequency	155
F.1. Moving Transmitter, Fixed Receiver	155
F.2. Moving Receiver, Fixed Transmitter	156
F.3. Transmitter and Receiver with Arbitrary Movement	157
G. Compressive Sensing and MIMO Processing	159
G.1. The MIMO Principle in Sensing Applications	159
G.2. Compressive Sensing	160
G.3. OMP Algorithm	161
H. Derivation of the Orthodrome and Average Angular Error	163
H.1. Orthodrome on a Spherical Surface	163
H.2. Derivation of the Average Error on a Spherical Surface	164
