Preface — VII

List of symbols — XIII

1	Classical Gauss hypergeometric function — 1
1.1	Infinite series — 1
1.2	Infinite product — 6
1.3	Gamma function and Pochhammer symbol — 8
1.4	Beta function — 18
1.5	The hypergeometric differential equation — 23
1.5.1	Kummer's 24 solutions — 27
1.6	Differential formulae and contiguous relations — 31
1.7	Integral representations — 40
1.8	Transformation and summation formulae — 48
1.9	Special cases — 51
1.10	Generalizations of Gauss function — 53
1.11	Degeneration or confluent form of Gauss hypergeometric function — 57
2	Basic Gauss hypergeometric function — 62
2.1	The q -numbers — 62
2.2	The q -binomial theorem — 66
2.3	The q -calculus — 69
2.4	The q -gamma and q -beta function — 72
2.5	Basic Gauss hypergeometric function — 75
2.6	The q -integral representation — 79
2.7	The q -contiguous and q -recursion relations — 80
2.8	The q -derivative formulas — 85
2.9	Transformation and summation formulae — 90
3	Gauss hypergeometric function with matrix arguments — 95
3.1	Positive definite matrix — 95
3.2	Matrix differentiation — 96
3.3	Jacobian of transformations — 102
3.4	Matrix integral transforms — 104
3.5	Zonal polynomial — 106
3.6	Multivariate gamma and beta functions — 106
3.7	Gauss hypergeometric function of the matrix arguments — 111
4	Gauss hypergeometric matrix function — 118
4.1	Matrix functional calculus — 118

4.2	Norm of a matrix — 121
4.3	Infinite matrix product — 127
4.4	Gamma and beta matrix functions — 132
4.5	On bilateral-type matrix differential equations — 144
4.6	Gauss hypergeometric matrix function — 146
4.7	The hypergeometric matrix differential equation — 153
4.8	Integral representation — 159
4.9	Matrix valued Gauss hypergeometric function — 162
4.10	The basic Gauss hypergeometric matrix function — 170
4.10.1	Matrix analogue of q -numbers — 170
4.10.2	The q -gamma matrix function — 174
4.10.3	The q -beta matrix function — 179
4.10.4	Hypergeometric matrix q -difference equation — 183
4.10.5	A q -integral representation — 186
5	Finite field analogue of the Gauss hypergeometric function — 193
5.1	Quadratic residue and Legendre symbol — 193
5.2	Multiplicative character — 194
5.3	Gauss sum — 196
5.4	Jacobi sum — 200
5.5	Gaussian analogue of binomial theorem — 201
5.6	Hypergeometric series over finite field — 203
5.7	Generalized hypergeometric series over a finite field — 211
6	Extended Gauss hypergeometric functions — 218
6.1	First extension of Gauss hypergeometric function — 218
6.1.1	Integral representations of the extended Gauss and confluent hypergeometric function — 224
6.1.2	Differential formulas — 226
6.1.3	Transformation formulas — 227
6.1.4	Recurrence relations — 227
6.2	Second extension of Gauss hypergeometric function — 228
6.2.1	Integral representation of new generalized beta function — 228
6.2.2	Properties of the new generalized beta function — 230
6.2.3	Generalized extended Gauss and confluent hypergeometric functions — 232
6.3	Third extension of the Gauss hypergeometric function — 237
6.3.1	Generalized Gauss hypergeometric and confluent hypergeometric functions — 243
6.4	Fourth extension of Gauss hypergeometric functions — 249
6.4.1	Extension of Gauss and confluent hypergeometric functions — 255

- 7 Other popular forms of a Gauss hypergeometric function — 263
 - 7.1 The (p, q) Gauss hypergeometric function — 263
 - 7.1.1 The (p, q) -gamma function — 266
 - 7.1.2 The (p, q) -beta function — 270
 - 7.1.3 The (p, q) -Gauss hypergeometric function — 271
 - 7.2 Incomplete Gauss hypergeometric function — 274
 - 7.2.1 The incomplete Pochhammer symbols — 275
 - 7.2.2 Generalized incomplete hypergeometric functions — 283
 - 7.3 Discrete Gauss hypergeometric function — 285
- A Sets, relations and functions — 299
- B Matrices — 315
- C Groups, rings, fields and vector spaces — 339
- Bibliography — 353
- Index — 359
