

Contents

1	Manifolds	1
1.1	Submanifolds of Euclidean Space	1
1.2	Smooth Manifolds	7
1.3	First Description of the Tangent Bundle: Via Charts	15
1.4	Second Description of the Tangent Bundle: Derivations.....	20
1.5	Third Description of the Tangent Bundle: Flows	26
1.6	Lie Groups	31
2	Vector Bundles and Tensors	43
2.1	Vector Bundles	43
2.2	Tensors	49
2.3	Exterior Algebra	56
2.4	De Rham Cohomology	63
2.5	Integration	68
3	Riemannian Manifolds	75
3.1	Riemannian Metrics	75
3.2	Connections and Curvature	85
3.3	The Levi-Civita Connection	95
3.4	Curvature of a Riemannian Manifold	102
4	The Poincaré–Hopf Theorem and the Chern–Gauß–Bonnet Theorem	107
4.1	The Mathai–Quillen–Thom Form	107
4.2	The Euler Class	111
5	Geodesics	119
5.1	Immersions	119
5.2	Geodesics	127
5.3	Jacobi Fields	135
5.4	The Hopf–Rinow Theorem.....	143

6	Homogeneous Spaces	149
6.1	Hyperbolic Space	149
6.2	Cartan’s Theorem and Spaces of Constant Curvature	156
6.3	Riemannian Submersions	158
6.4	Quotients	168
6.5	Discrete Fibers	175
6.6	Left-Invariant Metrics on Lie Groups	180
6.7	Existence of Homogeneous Metrics	183
6.8	Geometry of Homogeneous Spaces	190
7	Symmetric Spaces	201
7.1	Biinvariant Metrics on Lie Groups	202
7.2	Definition of Symmetric Spaces	206
7.3	The Cartan–Ambrose–Hicks Theorem	210
7.4	Symmetric Spaces and Group Involutions	213
7.5	Compact Type and Non-Compact Type	222
7.6	Isotropy-Irreducible Spaces	225
8	General Relativity	229
8.1	Constant Speed of Light	230
8.2	The Lorentz Group	237
8.3	Adjointsof Connections	239
8.4	Derivation of the Hilbert Action	243
8.5	Free Particles	248
8.6	The Stress-Energy Tensor	250
8.7	Electromagnetism	255
A	Solutions to Selected Exercises	261
	Bibliography	277
	Subject Index	283
	Notation Index	289
