

TABLE OF CONTENTS

Chapter 1. Preliminaries and Basic Results	1
1.1 Introduction	1
1.2 Preliminaries	5
1.3 The classical case of the lack of memory property	7
1.4 Motivations (Applications of characterization theorems in model building)	10
1.5 Basic properties of the exponential distribution	12
1.6 Monotonic transformations of the exponential distribution	18
Chapter 2. Characterizations Based on Truncated Distributions	21
2.1 Extended forms of the lack of memory property	22
2.2 A stability theorem	28
2.3 Characterizations based on conditional expected values	30
Chapter 3. Characterizations by Properties of Order Statistics	36
3.1 Introduction	36
3.2 Characterizations by distributional properties	38
3.3 Independence of functions of order statistics	46
3.4 Characterizations through moment assumptions	53
Chapter 4. Characterization of the Poisson Process	64
4.1 Introduction	64
4.2 Basic properties of Poisson processes	67
4.3 Characterizations based on age and residual life	80
4.4 Rarefactions, geometric compounding and damage models	95

Chapter 5. Characterizations of Multivariate Exponential Distributions	103
5.1 Introduction	103
5.2 Bivariate extensions based on LMP	104
5.3 The Multivariate Marshall-Olkin exponential distribution and its extensions	112
5.4 Characterization of MVE distributions based on hazard rate properties	120
5.5 Summary	132
Chapter 6. Miscellaneous Results	133
6.1 Characterizations by statistical properties	133
6.2 Records	136
6.3 Further results in terms of order statistics	138
6.4 Some additional characterizations	141
Bibliography	143
Subject Index	162
