

Thermoreversible Networks

Viscoelastic Properties
and Structure of Gels

By K. te Nijenhuis

Springer

Table of Contents

Abbreviations	XV
Symbols	XVII
1 Introduction.	1
1.1 Preamble	1
1.2 Definition of a Gel.	2
1.3 Classification of Gels	4
1.4 Determination of Gel Point	4
1.4.1 Solubility.	5
1.4.2 Tilted-Test-Tube and Falling Ball Methods	5
1.4.3 Measurement of Mechanical Properties	6
1.4.4 The Method of Winter and Chambon.	6
1.5 Relationships Between G_e and the Network Structure.	8
1.5.1 Introduction	8
1.5.2 The Flory-Stockmayer Model	8
1.5.3 Extension of the Flory-Stockmayer Model	9
1.6 Scope of the Review	11
2 Poly(vinyl chloride)	13
2.1 Introduction	13
2.2 Viscoelasticity.	19
2.2.1 Introduction	19
2.2.2 Time Dependence.	20
2.2.3 Concentration Dependence	22
2.2.4 Solvent Dependence	24
2.2.5 Temperature Dependence	24
2.2.6 Molecular Weight Dependence	26
2.2.7 Chlorination of Poly(vinyl chloride)	27
2.2.8 Extraction of Commercial Poly(vinyl chloride).	27
2.2.9 Time Temperature Superposition.	29
2.2.10 Modulus Curves	31
2.2.11 Excess Ageing after a Temperature Quench Following Previous Ageing at Higher Temperatures	32

2.2.12	Temperature Increase	34
2.2.13	Small-Angle X-ray Scattering Combined with Viscoelasticity	34
2.3	Conclusions.	36
3	Poly(vinyl alcohol)	37
3.1	Introduction	37
3.2	Aqueous Solutions and Gels	38
3.2.1	Introduction	38
3.2.2	Stereoregularity	40
3.2.3	Temperature History	43
3.2.4	Degree of Saponification.	43
3.3	Other Solvents	45
3.3.1	Introduction	45
3.3.2	Ethylene Glycol/Water Systems	46
3.3.3	Dimethyl Sulfoxide/Water Systems.	49
3.4	Gelation by Addition of Borate Ions	51
3.4.1	Early Studies	51
3.4.2	More Recent Studies	54
3.5	Gelation by Addition of Congo Red	57
3.5.1	Introduction	57
3.5.2	Complexation in Aqueous Congo Red Solutions	58
3.5.3	Viscoelastic Properties and Melting Enthalpies	60
3.5.4	Gelation Kinetics	63
3.6	Conclusions	65
4	Poly(methyl methacrylate)	67
4.1	Introduction	67
4.2	Parameters which Determine Aggregation and Gelation Behaviour	67
4.2.1	Ratio of i-PMMA and s-PMMA in the Mixture	67
4.2.2	Minimum Sequence Length	69
4.2.3	Thermal Stability	69
4.2.4	Molecular Weight Dependence	70
4.2.5	Effect of Solvent.	70
4.2.6	Kinetics of Aggregation	71
4.3	Viscoelastic Behaviour of PMMA Gels.	72
4.3.1	Mixtures of i-PMMA and s-PMMA.	72
4.3.2	Syndiotactic Poly(methyl methacrylate)	75
4.4	Conclusions.	81
5	Atactic Polystyrene	82
5.1	Introduction	82
5.2	Experimental Data.	82
5.3	Mechanism of the Gelation Process.	88
5.4	Gel Structure	90
5.5	Conclusions.	95

6 Polyacrylonitrile	96
6.1 Introduction	96
6.2 Crystallinity	96
6.3 Crystallinity in Gels	98
6.4 Viscoelastic Behaviour of Gels	100
6.5 Conclusions	105
7 Polyethylene	106
7.1 Introduction	106
7.2 Phase Behaviour	106
7.3 High Density Polyethylene	108
7.4 Linear Low Density Polyethylene	110
7.5 Low Density Polyethylene	113
7.6 Chlorinated Polyethylenes	115
7.7 Viscoelastic Properties	115
7.8 Conclusions	122
8 Block Copolymers	124
8.1 Introduction	124
8.2 Styrene-Isoprene-Styrene Triblock Copolymers	126
8.3 Styrene-Butadiene-Styrene Triblock Copolymers	128
8.4 Ethylene oxide-Propylene oxide-Ethylene oxide Triblock Copolymers	130
8.5 Propylene oxide-Ethylene oxide-Propylene oxide Triblock Copolymers	139
8.6 Multiblock Copolymers	140
8.7 Conclusions	143
9 Liquid Crystalline Polymers	145
9.1 Introduction	145
9.2 SCLCPs: Side Chain Liquid Crystalline Polymers	147
9.3 MCLCPs: Main Chain Liquid Crystalline Polymers	154
9.4 Conclusions	158
10 Gelatin	160
10.1 Introduction	160
10.2 Time and Temperature Dependences of Dynamic Moduli	166
10.2.1 Plain Ageing	166
10.2.2 Special Temperature History	171
10.3 Concentration Dependence	173
10.3.1 Phenomenology	173
10.3.2 Theoretical Considerations	175
10.3.3 Gel Melting Temperature	178
10.3.4 Determination of Maximum Gelation Temperature	179

10.3.5	Melting Enthalpy ΔH_m°	179
10.3.6	Crosslinking Enthalpy ΔH°	182
10.4	Critical Gelation	185
10.4.1	Temperature Dependence	185
10.4.2	Concentration Dependence	186
10.5	Viscoelasticity and Optical Rotation	189
10.6	Conclusions	193
11	Agarose	194
11.1	Introduction	194
11.2	Viscoelastic Behaviour	196
11.2.1	Introduction	196
11.2.2	Alkali Treatment	197
11.2.3	Methoxy Groups Content	198
11.2.4	Alkaline Metal Ions	198
11.2.5	Concentration Dependence	199
11.2.6	Molecular Weight Dependence	199
11.2.7	Temperature Dependence	201
11.2.8	Solvent Dependence	202
11.3	Conclusions	202
12	Carrageenans	203
12.1	Introduction	203
12.2	Crosslink Structure	206
12.3	Viscoelastic Behaviour	210
12.3.1	Alkali Treatment	210
12.3.2	Dependence on Electrolyte Concentration	211
12.3.3	Molecular Weight Dependence	212
12.3.4	Concentration Dependence	213
12.3.5	Temperature Dependence, Critical Gelation	215
12.4	Comparison of Viscoelastic Behaviour of Aqueous Agarose and kappa Carrageenan Solutions	216
12.5	Conclusions	218
13	Gellan Gum	219
13.1	Introduction	219
13.2	Optical Rotation	220
13.3	Effect of Esterification	223
13.4	Network Model	224
13.5	X-ray Diffraction	225
13.6	Viscoelastic Behaviour	227
13.6.1	General Behaviour	227
13.6.2	Temperature and Concentration Dependence	227
13.6.3	Time Dependence	228
13.6.4	Dependence on Electrolyte Concentration	228
13.6.5	pH Dependence	234
13.7	Conclusions	234

14 Concluding Remarks. 236

15 Appendix 239

16 References. 241
