## Processor Design

### Code Size Reduction by Compiler Tuning

|                                                                                   |     |
|-----------------------------------------------------------------------------------|-----|
| <i>Masayo Haneda, Peter M.W. Knijnenburg,</i><br><i>Harry A.G. Wijshoff</i> ..... | 186 |
|-----------------------------------------------------------------------------------|-----|

### Energy Optimization of a Multi-bank Main Memory

|                                                                                          |     |
|------------------------------------------------------------------------------------------|-----|
| <i>Hanenc Ben Fradj, Sébastien Icart, Cécile Belleudy,</i><br><i>Michel Auguin</i> ..... | 196 |
|------------------------------------------------------------------------------------------|-----|

### Probabilistic Modelling and Evaluation of Soft Real-Time Embedded Systems

|                                                                                    |     |
|------------------------------------------------------------------------------------|-----|
| <i>Oana Florescu, Menno de Hoon, Jeroen Voeten,</i><br><i>Henk Corporaal</i> ..... | 206 |
|------------------------------------------------------------------------------------|-----|

### Hybrid Functional and Instruction Level Power Modeling for Embedded Processors

|                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------|-----|
| <i>Holger Blume, Daniel Becker, Martin Botteck, Jörg Brakensick,</i><br><i>Tobias G. Noll</i> ..... | 216 |
|-----------------------------------------------------------------------------------------------------|-----|

### Low-Power, High-Performance TTA Processor for 1024-Point Fast Fourier Transform

|                                                                                                    |     |
|----------------------------------------------------------------------------------------------------|-----|
| <i>Tecnu Pitkäänen, Risto Mäkinen, Jari Heikkinen, Tero Partanen,</i><br><i>Jarmo Takala</i> ..... | 227 |
|----------------------------------------------------------------------------------------------------|-----|

### Software Pipelining Support for Transport Triggered Architecture Processors

|                                                                                          |     |
|------------------------------------------------------------------------------------------|-----|
| <i>Perttu Salmela, Pekka Jääskeläinen, Tuomas Järvinen,</i><br><i>Jarmo Takala</i> ..... | 237 |
|------------------------------------------------------------------------------------------|-----|

### SAD Prefetching for MPEG4 Using Flux Caches

|                                                         |     |
|---------------------------------------------------------|-----|
| <i>Georgi N. Gaydadjiev, Stamatis Vassiliadis</i> ..... | 248 |
|---------------------------------------------------------|-----|

### Effects of Program Compression

|                                           |     |
|-------------------------------------------|-----|
| <i>Jari Heikkinen, Jarmo Takala</i> ..... | 259 |
|-------------------------------------------|-----|

### Integrated Instruction Scheduling and Fine-Grain Register Allocation for Embedded Processors

|                                         |     |
|-----------------------------------------|-----|
| <i>Dae-Hwan Kim, Hyuk-Jae Lee</i> ..... | 269 |
|-----------------------------------------|-----|

### Compilation and Simulation Tool Chain for Memory Aware Energy Optimizations

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| <i>Manish Verma, Lars Wehmeyer, Robert Pyka, Peter Marwedel,</i><br><i>Luca Benini</i> ..... | 279 |
|----------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A Scalable, Multi-thread, Multi-issue Array Processor Architecture<br>for DSP Applications Based on Extended Tomasulo Scheme<br><i>Mladen Bereković, Tim Niggencier</i> ..... | 289 |
| Reducing Execution Unit Leakage Power in Embedded Processors<br><i>Houman Homayoun, Amirali Baniasadi</i> .....                                                               | 299 |
| Memory Architecture Evaluation for Video Encoding on Enhanced<br>Embedded Processors<br><i>Ali Iranpour, Krzysztof Kuchcinski</i> .....                                       | 309 |
| Advantages of Java Processors in Cache Performance and Power for<br>Embedded Applications<br><i>Antonio Carlos S. Beck, Mateus B. Rutzig, Luigi Carro</i> .....               | 321 |

## Dependable Computing

|                                                                                                                                                                                     |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| CARROT – A Tool for Fast and Accurate Soft Error Rate Estimation<br><i>Dimitrios Bountas, Georgios I. Stamoulis</i> .....                                                           | 331 |
| A Scheduling Strategy for a Real-Time Dependable Organic Middleware<br><i>Uwe Brinkschulte, Alexander von Renteln, Mathias Pacher</i> .....                                         | 339 |
| Autonomous Construction Technology of Community for Achieving<br>High Assurance Service<br><i>Kotaro Hama, Yuji Horikoshi, Yosuke Sugiyama, Kinji Mori</i> .....                    | 349 |
| Preventing Denial-of-Service Attacks in Shared CMP Caches<br><i>Georgios Keramidas, Pavlos Petroumenos, Stefanos Kariras,<br/>Alexandros Antonopoulos, Dimitrios Serpanos</i> ..... | 359 |

## Architectures and Implementations

|                                                                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A Method for Router Table Compression for Application Specific<br>Routing in Mesh Topology NoC Architectures<br><i>Maurizio Palesi, Shashi Kumar, Rickard Holmsmark</i> ..... | 373 |
| Real-Time Embedded System for Rear-View Mirror Overtaking Car<br>Monitoring<br><i>Javier Díaz, Eduardo Ros, Sonia Mota, Rodrigo Agis</i> .....                                | 385 |
| Design of Asynchronous Embedded Processor with New Ternary Data<br>Encoding Scheme<br><i>Je-Hoon Lee, Eun-Ju Choi, Kyoung-Rok Cho</i> .....                                   | 395 |

|                                                                                                                                                                                                                                                              |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Hardware-Based IP Lookup Using $n$ -Way Set Associative Memory<br>and LPM Comparator<br><i>SangKyun Yan</i> .....                                                                                                                                            | 406 |
| A Flash File System to Support Fast Mounting for NAND Flash<br>Memory Based Embedded Systems<br><i>Song-Hwa Park, Tae-Hoon Lee, Ki-Dong Chung</i> .....                                                                                                      | 415 |
| Rescheduling for Optimized SHA-1 Calculation<br><i>Ricardo Chaves, Georgi Kuzmanov, Leonel Sousa,<br/>Stamatis Vassiliadis</i> .....                                                                                                                         | 425 |
| Software Implementation of WiMAX on the Sandbridge SandBlaster<br>Platform<br><i>Daniel Iancu, Hua Ye, Emanoil Sarducan, Murugappan Senthilvelan,<br/>John Glossner, Vasile Sarducan, Vladimir Kotlyar, Andrei Iancu,<br/>Gary Nacer, Jarmo Takala</i> ..... | 435 |
| High-Radix Addition and Multiplication in the Electron Counting<br>Paradigm Using Single Electron Tunneling Technology<br><i>Cor Mcenderinck, Sorin Cotofana</i> .....                                                                                       | 447 |
