

CONTENTS

Abstracts	vii
Introduction	ix
R. BIELAWSKI — <i>Lie groups, Nahm's equations and hyperkähler manifolds</i>	1
1. Introduction	1
2. Quaternions and Lie groups	2
3. Orbits	9
4. Applications to symmetric pairs and real orbits	13
References	16
F. BOGOMOLOV — <i>Stable cohomology of finite and profinite groups</i>	19
1. Introduction	19
2. Group Cohomology: algebraic approach	19
3. Topological approach	21
4. Geometric approach	25
5. Separation of primes	26
6. Applications to birational geometry	28
7. Stable cohomology of algebraic varieties	33
8. Unramified group cohomology	36
9. Stable cohomology of the Galois groups of function fields	40
10. The spaces V^L/G as universal spaces	42
11. On the Freeness conjecture	45
References	47
U. BUNKE, R. WALDMÜLLER — <i>Analysis on Symmetric and Locally Symmetric Spaces (Multiplicities, Cohomology and Zeta functions)</i>	51
1. Multiplicities of principal series	51
2. The Selberg Zeta function	57
3. Generalisations	61
References	62

P. L. KASSAEI — <i>The eigencurve: a brief survey</i>	63
References	69
A. KRESCH — <i>Flag varieties and Schubert calculus</i>	73
1. Introduction	73
2. The Grassmannian $G(k, n)$	74
3. Combinatorial rules: Schubert calculus	79
4. Flag varieties	81
5. Bibliographic remarks	86
References	86
A. SARVENIAZI, S. WIEDMANN — <i>Zeta Function of Graphs</i>	87
1. Basic definitions	87
2. Explicit Construction of Families of Ramanujan Graphs	91
3. LPS family of Ramanujan graphs	92
4. The family of finite upper half-plane graphs - Terras family	93
5. Riemann zeta funktion and graphs	94
6. Images of the Terras family	98
References	98
T. SCHICK — <i>Loop groups and string topology</i>	99
1. Introduction	99
2. Basics about compact Lie groups	100
3. Basics about loop groups	104
4. Root system and Weyl group of loop groups	108
5. Central extensions of LG	110
6. Representations of loop groups	111
7. Proofs and Homogeneous spaces of LG	116
References	119
R. TAKLOO-BIGHASH — <i>The spinor L-function</i>	121
1. Introduction	121
2. Classical Siegel forms and automorphic representations	122
3. The Spinor L-function for $\mathrm{GSp}(4)$	126
4. Bessel functionals	140
5. Saito-Kurokawa and CAP representations	147
6. Further developments	149
References	153
