PART I: Constitutive Equations, Combined Loadings 1

J. Betten: <i>Applications of tensor functions in creep mechanics</i> - (general lecture)	3
D.A. Gokhfeld, O.S. Sadakov: <i>A unified mathematical model for plasticity and creep under variable-repeated loading</i> - (general lecture)	23
A. Bertram, J. Olschewski, M. Zelewski, R. Sievert: <i>Anisotropic creep modeling for f.c.c. single crystals</i>	29
D. Besdo, L. Ostrowski: <i>On the creep-ratchetting of AlMgSi 0.5 at elevated temperature; experimental investigations</i>	37
J. Besson, M. Abouaf, F. Mazerolle, P. Suquet: <i>Compressive creep tests on porous ceramic notched specimens</i>	45
O. Brüller: <i>Some new aspects of the nonlinear characterization of creep and stress relaxation of polymers</i>	55
G.I. Bykovtsev: <i>Constitutive equations of nonstationary metal creep</i>	63
J.L. Ding, W.N. Findley: <i>Creep of metals under variable complex loadings</i> .	69
V.P. Golub: <i>Theory of creep and long-term strength of isotropic hardening media</i>	77
P. Gummert: <i>A constitutive equation for non-linear, compressible viscoelastic materials with fading memory</i>	83
U. Heemann, E. Stein: <i>Transient creep in rock salt structure</i>	91
H. Ishikawa: <i>A hybrid constitutive model for cyclic, and creep deformation</i>	99
M. Kawai: <i>Anisotropic creep behaviour induced by plastic deformation</i> . . .	107
Z. Kowalewski: <i>The influence of deformation history on creep of pure copper</i>	115
E. Krempl, P.S. Majors: <i>Modeling of recovery of state using the viscoplasticity theory based on overstress</i>	123
T. Kurtyka, M. Życzowski: <i>Some attempts to describe distortional hardening in viscoplasticity</i>	131
M.V. Mićunović: <i>A viscoplasticity theory of irradiated materials</i>	139
E.R. Oberaigner, F.D. Fischer: <i>Diffusional transformation and creep in steels</i>	147
N. Ohno, T. Mizuno: <i>Effects of slip system and lattice rotation on combined tension-torsion creep of a directionally solidified alloy</i>	155

K. Onaran: <i>Nonlinear constitutive equations for creep of structural materials</i>	163
P. Pilvin, G. Cailletaud: <i>Intergranular and transgranular hardening in viscoplasticity</i>	171
O.S. Sadakov, V.N. Madudin, M.V. Apajchev: <i>On the state equations for anisotropic elasto-visco-plastic bodies</i>	179
M. Waniewski: <i>Effects of prior plastic strain path shapes on creep behaviour of incompressible materials</i>	187
O. Watanabe, S.N. Atluri: <i>Some unification of creep theories based on internal time concept</i>	195
H. Weber: <i>Characterization of nonlinear viscoelastic materials for a special class of loading histories</i>	203
Y.-B. Yang, L.J. Leu: <i>Constitutive law and force recovery for large strain problems</i>	209
A. Zolochovsky: <i>Creep of isotropic and anisotropic materials with different behaviour in tension and compression</i>	217

PART II: Damage, Creep Crack Growth, Creep Rupture **221**

A. Benallal, J. Lemaitre: <i>Localization phenomena in thermo-elastoplasticity - (general lecture)</i>	223
S. Murakami, M. Mizuno: <i>Mechanical modeling of irradiation creep and its application to the analysis of creep crack growth - (general lecture)</i>	237
K. Ohji, S. Kubo: <i>Fatigue crack propagation behavior under creep conditions - (general lecture)</i>	253
R.A. Ainsworth: <i>Creep life estimates for defective structures</i>	269
H.A. Bahr, H. Balke, W. Pompe, S. Werdin: <i>Non-stationary nucleation of cavities at grain boundaries</i>	279
A. Bodnar, M. Chrzanowski: <i>A non-unilateral damage in creeping plates</i>	287
E. van der Giessen, V. Tvergaard: <i>On microcracking due to cavitation and grain boundary sliding in creeping polycrystals</i>	295
I.W. Goodall, R.A. Ainsworth: <i>An assessment procedure for the high temperature response of structures</i>	303
F.R. Hall, D.R. Hayhurst: <i>Creep continuum damage mechanics - studies of size effects and weldments</i>	313
N.C. Huang: <i>Crack growth in linearly viscoelastic media</i>	323
T.H. Hyde, A.C. Chambers: <i>Mixed-mode creep and creep/fatigue crack growth</i>	331
R. Kienzler, T. Hollstein: <i>Theoretical, experimental and numerical investigations of creep crack growth</i>	339
T. Kitamura, N. Tada, R. Ohtani: <i>Characterization of creep-fatigue failure process based on stochastic behavior of small crack initiation and growth</i>	347

S. Kruch, J.L. Chaboche, P.M. Lesne: <i>A new damage approach for creep crack growth prediction</i>	355
S. Kubo, K. Ohji: <i>Small-scale and large-scale creep predictions of notch stress and strain under creep conditions</i>	363
A. Litewka, Z. Lis: <i>Creep rupture of metals under tri-axial state of stress</i>	371
A. M. Lokoshtchenko: <i>The investigation of the metal damage at the creep by the method of electrical resistance measuring</i>	379
J. Lujerink: <i>Creep of concrete during load-controlled experiments</i>	385
J. Matoušek: <i>Evaluation of creep damage in some major components of steam turbine</i>	393
M. Montagnani, C. Albertini, M.V. Mićunović: <i>Uniaxial viscoplastic experiments of predamaged AISI 316H</i>	401
J.M. Neumeister: <i>Creep rupture in fibre bundles with hardening-softening fibre material</i>	409
M. Ohnami, M. Sakane, T. Hasebe: <i>Creep-fatigue life and cyclic constitutive relation of MAR-M247 directionally solidified superalloy at high temperature</i>	417
M. Ostoja-Starzewski: <i>Percolation models as a basis of material failure</i>	425
R. Piques, A. Pineau: <i>Global and local approaches to creep crack initiation and creep crack growth</i>	433
R.H. Priest, D.A. Miller: <i>The assessment of creep-fatigue initiation and crack growth</i>	441
R. Pyrz: <i>A constitutive model for creep and damage in composite materials</i>	451

PART III: Structures, Analytical and Numerical Methods, Optimal Design

459

K.J. Bathe, M. Kojić, J. Walczak: <i>Advances in finite element methods for elasto-plastic and creep analysis - (general lecture)</i>	461
J.F. Besseling: <i>Large displacements and rotations for shells of revolution due to axisymmetric elastic, creep and plastic deformation - (general lecture)</i>	469
J.N.C. Guerreiro, A.F.D. Loula, J.T. Boyle: <i>Finite element methods in stress analysis for creep - (general lecture)</i>	485
S. Jansson, F.A. Leckie: <i>Thermal, mechanical & creep behavior of metal matrix composites - (general lecture)</i>	503
M. Źyczkowski: <i>Problems of structural optimization under creep conditions - (general lecture)</i>	519
H. Altenbach: <i>Modelling of viscoelastic behaviour of plates</i>	531
R.G. Anderson: <i>The verification of the solutions of large problems of discontinuous creeping structures</i>	539
S. Cescotto: <i>Creep analysis in a large strain context by unified constitutive equations</i>	547

J.-Y. Cognard, P. Ladeveze: <i>The large time increment method applied to cyclic loadings</i>	555
W.S. Edelstein: <i>Some analytic results pertaining to stress redistribution in a class of structures undergoing primary or secondary creep</i>	563
A. Ganczarski, J. Skrzypek: <i>On optimal design of disk with respect to creep rupture</i>	571
T. Igari, K. Setoguchi, S. Nomura: <i>Prediction of macroscopic and local creep behavior of perforated plates</i>	579
T. Inoue, S. Imatani, M. Tanaka: <i>A viscoplastic constitutive relationship and the finite element implementation of stress/strain concentration in notched component</i>	587
M. Paley, J. Aboudi: <i>Creep buckling of inelastic plates</i>	595
R.K. Penny: <i>Contributions to robust methods of creep analysis</i>	601
V.D. Potapov: <i>On the stability of viscoelastic beams under a stochastic excitation</i>	609
S.A. Shesterikov, M.A. Yumasheva: <i>On the non-linear creep flow potential</i> .	615
Z. Sobotka: <i>Bending of orthotropic viscoelastic plates with thermal effects</i> .	621
G.R. Stevick, I. Finnie: <i>Stress concentrations resulting from longitudinal butt-welds in piping at elevated temperatures</i>	629
K. Szuwalski: <i>Bars of uniform strength vs. optimal with respect to ductile creep rupture time</i>	637
W. Szyszkowski, P.G. Glockner: <i>A numerical method of nonlinear viscoelastic structural analysis</i>	645
A. Tylikowski: <i>Stability and bounds on motion of viscoelastic columns with imperfections and time-dependent forces</i>	653
A.M. Vinogradov: <i>Nonlinear instability induced by creep</i>	659
H. Walter, H. Mang: <i>Finite element-implementation of creep of concrete for thin-shell analysis using nonlinear constitutive relations and creep compliance functions</i>	667
A. Wróblewski: <i>Optimal design of annular plates against creep buckling</i> .	677
T.Q. Yang, R. Wang, Z.W. Yang: <i>Dynamic response of a viscoelastic circular plate on a viscoelastic half space foundation</i>	685
M.A. Zadayan: <i>Low-stress level of a compound wedge under steady creep</i> .	693
W. Zhang, S.-T. Yau, Y.-Y. Lu: <i>Creep instability of spinning viscoelastic rod</i>	701
