

Table of Contents

Part 1
Workstation Architectures

Display Architecture for VLSI-based Graphics Workstations
P.J. ten Hagen, A.A.M. Kuijk and C.G. Trienekens 3

Towards a 3-D Graphics Workstation
A. Kaufmann 17

Looking at Workstation Architectures from the Viewpoint of Interaction
D. Krömker 27

Discussion 38

Part 2
Traffic Simulators

A Survey of Simulator Requirements
H. Joseph 41

A Visual System for a Traffic Simulator
R. Möller 45

Developments in High Performance CGI Systems
R.L. Grimsdale and P.F. Lister 59

Discussion 71

Part 3
Hardware Support for Geometric Modelling

CSG Hidden Surface Algorithms for VLSI Hardware Systems
F. W. Jansen 75

Utilization of VLSI for Creating an Active Data Base of 3-D Geometric Models
J. Skyttä and T. Takala 83

Display Hardware for Boolean Expression Models
A.L. Thomas 94

Discussion 122

Part 4

Ray-Tracing**VLSI Chip for Ray Tracing Bicubic Patches**

R.W. Pulleyblank and J. Kapenga 125

**Towards a Z-Buffer and Ray-Tracing Multimode System based
on Parallel Architecture and VLSI chips**

P. Leray 141

Discussion 146

List of Participants 147
