

Contents

1	Introduction	1
1.1	What Is Cognition?	1
1.2	Cognizing Agents	4
1.3	Cognitive Reasoning	6
1.4	Logic and Cognitive Reasoning	10
1.5	Requirements for a Formal Cognitive Reasoning Theory	11
1.6	Objectives	13
1.7	The Formal Approach to Be Developed	14
1.8	Overview	15

Part I Conceptual Theory of Cognitive Reasoning

2	Introductory Explanation	25
3	Basic System of Concepts	29
3.1	Facts and Knowledge	29
3.2	Truth Values: Informal Discussion	32
3.3	Reasoning	35
4	Constructing a Model of a Cognizing Agent	41
4.1	The Structure and Functioning of the Cognizing Agent	43
5	Cognitive Reasoning Framework	51
5.1	Theories of the CR Framework	52
5.2	Modelling Cognitive Reasoning in the CR Framework	60

Part II Logic Foundation

6	Introductory Explanation	71
----------	---------------------------------	-----------

7	Propositional Logic	73
7.1	Notation	74
7.2	Classical Propositional Logic (Syntax and Semantics)	75
7.3	Classical Propositional Logic (Calculus)	77
7.4	Propositional PJ Logics (Syntax and Semantics)	78
7.5	PJ Logics (Calculus)	83
8	First-Order Logics	93
8.1	Terms and Notation	93
8.2	Classical First-Order Logic (Syntax and Semantics)	105
8.3	Classical First-Order Logic (Calculus)	108
8.4	First-Order PJ Logics (Syntax and Semantics)	110
8.5	First-Order PJ Logic (Calculus)	114
 Part III Formal CR Framework		
9	Introductory Explanation	127
10	Modification Calculi	131
10.1	State Descriptions over Sets of Constants	132
10.2	Inference	141
11	Derivability in Modification Calculi and L^1	159
11.1	Cuts of Record Strings: the General Case	159
11.2	(m, s) -Cuts	168
11.3	Deductive Cuts and Their Applications	179
11.4	Deductive Correctness	185
12	Semantics	195
12.1	Sequences of L -Structures	195
12.2	Structure Generators	198
13	Iterative Representation of Structure Generators	209
13.1	Immersion and Snaps	209
13.2	Implementations and Extensions	213
13.3	Iterative Images	220
14	Modification Theories	237
14.1	Validity and Derivability	237
14.2	Modification Theories	244
15	Conformability	259
15.1	Locality	259
15.2	Atomic Sorts	268

Part IV Handling Complex Structures

16	Introductory Explanation	277
16.1	Atomic Sorts	277
16.2	Set Sorts	278
16.3	Some Properties of the Set Sorts	281
16.4	Modification Rules and Modification Calculi for Set Sorts	282
16.5	Example	284
17	Set-Admitting Structures	291
17.1	Atoms	291
17.2	Set Axioms	295
18	Set Sorts in Modification Calculi	301
18.1	Positive and Negative Connection w.r.t. Set Sorts	301
18.2	Generating Rules for Modification Rule Systems with Set Sorts	305
19	Perfect Modification Calculi (PMC)	313
19.1	Coherent Inferences in Perfect Modification Calculi (General Properties)	313
19.2	Modification Rules Within Coherent Inferences (Positive Case)	322
19.3	Modification Rules Within Coherent Inferences (Negative Case)	330
19.4	Conformability (Set Case)	337

Part V JSM Theories

20	Introductory Explanation	343
21	Simple JSM Theories	345
21.1	Basic JSM theories	345
21.2	Simple JSM Theories	346
21.3	Causal and Prediction Rules	349
21.4	Defining Axioms for the Simple JSM Theories	350
21.5	Simple JSM Theories with Exclusion of Counterexamples	352
22	Advanced JSM Theories	355
22.1	Generalised JSM Theories	355
22.2	Defining Axioms for the Generalised JSM Theories	359
22.3	Non-symmetric JSM Theories	361
23	Similarity Representation	365
23.1	Basic Concepts	365
23.2	Distinguishability Condition and Similarity Representation	367

24 JSM Theories for Complex Structures	371
24.1 JSM Theories with Set Sorts	371
24.2 Simple JSM Theories with Property Sets	373
24.3 Defining Axioms for the Simple JSM Theories with Property Sets	377
Part VI Looking Back and Ahead	
25 Introductory Overview	383
26 Towards the Realisation	387
26.1 Object Model Description	387
26.2 Object Model Application	397
27 CR Framework	399
27.1 Conceptual CR Framework	399
27.2 Formal CR Framework	401
28 Open Problems	407
29 Philosophical–Methodological Implications of the Proposed CR Framework	411
29.1 Epistemology	411
29.2 Ontology	414
29.3 Methodology	416
References	421
Glossary	425
Index	431
