|----------------------------------------------------------------------------------------------|-----------|
| Preface to 2nd Edition.....                                                                  | VI        |
| Preface .....                                                                                | VII       |
| Acknowledgments.....                                                                         | VIII      |
| Foreword .....                                                                               | X         |
| Frequently Used Abbreviations and Acronyms .....                                             | XIX       |
| <b>Chapter 1 – Overview.....</b>                                                             | <b>1</b>  |
| 1.1 Introduction .....                                                                       | 1         |
| 1.1.1 The Problem .....                                                                      | 1         |
| Urinary Incontinence.....                                                                    | 1         |
| Frequency of Urination.....                                                                  | 1         |
| Nocturia .....                                                                               | 2         |
| Bowel Dysfunction .....                                                                      | 2         |
| Abnormal Bladder Emptying .....                                                              | 2         |
| Chronic Pelvic Pain .....                                                                    | 2         |
| Other Problems .....                                                                         | 2         |
| 1.1.2 The Integral Theory - A New Perspective .....                                          | 2         |
| 1.1.3 A Guide to the Diagrams Used in this Book.....                                         | 3         |
| Series 1 Static Anatomy .....                                                                | 3         |
| Series 2 Dynamic Anatomy .....                                                               | 5         |
| Series 3 Functional Anatomy .....                                                            | 6         |
| 1.2 Overview of Pelvic Floor Function and Dysfunction According to the Integral Theory.....  | 7         |
| 1.2.1 Basic Tenets of the Integral Theory.....                                               | 7         |
| Structure and Form .....                                                                     | 9         |
| Function and Dysfunction.....                                                                | 9         |
| Causes of Dysfunction - Delineating the Zones of Damage .....                                | 9         |
| Diagnosis of Damage .....                                                                    | 10        |
| Surgical Repair of Connective Tissue Structures .....                                        | 11        |
| 1.3 Summary Chapter 1 .....                                                                  | 12        |
| <b>Chapter 2 – The Anatomy and Dynamics of Pelvic Floor Function and Dysfunction .....</b>   | <b>14</b> |
| 2.1 The Anatomy of Pelvic Floor Function.....                                                | 14        |
| 2.1.1 Introduction .....                                                                     | 14        |
| 2.1.2 The Role of Ligaments, Muscles and Fascia in Creating Form, Strength and Function..... | 15        |
| 2.1.3 The Role of Connective Tissue Structures.....                                          | 15        |
| 2.1.4 The Key Ligaments of the Pelvic Floor Structure .....                                  | 16        |
| The Pubourethral Ligament (PUL).....                                                         | 16        |
| The Arcus Tendineus Fascia Pelvis (ATFP) .....                                               | 17        |
| The Uterosacral Ligaments (USL).....                                                         | 17        |
| The Pubovesical Ligament (PVL) .....                                                         | 17        |
| The Precervical Arc of Gilvernet .....                                                       | 18        |
| The Trigone .....                                                                            | 18        |
| Fascial attachment of the vagina to ATFP.....                                                | 18        |
| Organ Spaces .....                                                                           | 19        |
| The Pubocervical Fascia .....                                                                | 19        |
| The Rectovaginal Fascia .....                                                                | 19        |

|                                                                                                                                    |    |
|------------------------------------------------------------------------------------------------------------------------------------|----|
| The Cervical Ring .....                                                                                                            | 20 |
| The Role of Proximal Cervical Ring Fascia in Preventing Everting Vaginal Prolapse .....                                            | 20 |
| The Role of Proximal Cervical Ring Fascia in Preventing Peripheral Neurologically<br>Derived Symptoms.....                         | 20 |
| 2.1.5 The Muscles of the Pelvic Floor .....                                                                                        | 21 |
| The Upper Layer of Muscles .....                                                                                                   | 22 |
| The Middle (Connecting) Layer of Muscles .....                                                                                     | 23 |
| The Lower Layer of Muscles .....                                                                                                   | 23 |
| The Special Case of the Puborectalis Muscle.....                                                                                   | 24 |
| 2.2 The Dynamics of Pelvic Floor Function .....                                                                                    | 25 |
| 2.2.1 The Dynamics of the Striated Pelvic Floor Muscles.....                                                                       | 25 |
| The Dynamics of Urethral Opening and Closure – Urethral Perspective.....                                                           | 25 |
| The Dynamics of Urethral Closure and Opening – Vaginal Perspective.....                                                            | 27 |
| 2.2.2 Pelvic Floor Dynamics - The 'Mechanical' Dimension.....                                                                      | 28 |
| Resting Closed.....                                                                                                                | 28 |
| Closure During Effort.....                                                                                                         | 29 |
| Urethral Opening by External Striated Muscle Forces During Micturition .....                                                       | 30 |
| 2.2.3 Pelvic floor dynamics - the neurological dimension.....                                                                      | 31 |
| Urethral Closure.....                                                                                                              | 31 |
| Urethral Opening (Micturition) .....                                                                                               | 31 |
| The Role of Connective Tissue Tension in the Peripheral Neurological Control<br>Mechanism for Micturition .....                    | 32 |
| 2.3 The Role of Connective Tissue in Pelvic Floor Function and Dysfunction.....                                                    | 34 |
| 2.3.1 The Biomechanics of the Vagina .....                                                                                         | 35 |
| The Effect of Pregnancy Hormones on Connective Tissue.....                                                                         | 36 |
| The Effect of Age on Connective Tissue .....                                                                                       | 36 |
| The Role of Connective Tissue in Transmitting Muscle Forces – The Sail Analogy .....                                               | 36 |
| The Positive Effect of Uterine Conservation in Preserving Ligament Integrity .....                                                 | 37 |
| 2.3.2 The Role of Connective Tissue in the Maintenance of Form (Structure) and Function.....                                       | 37 |
| The Causes of Damaged Connective Tissue .....                                                                                      | 38 |
| Structural Effects of Damaged Connective Tissue.....                                                                               | 38 |
| Lax Connective Tissue and Diminution of the Force of Muscle Contraction .....                                                      | 39 |
| 2.3.3 The Role of Connective Tissue in Balance and Imbalance of Pelvic Muscle Forces<br>– Effects on Micturition and Closure ..... | 40 |
| Closure at Rest and Effort.....                                                                                                    | 40 |
| Normal Micturition – A Controlled Temporary Unbalancing of the Closure System .....                                                | 41 |
| The Role of Damaged Connective Tissue in Incontinence Causation.....                                                               | 42 |
| Symptomatic Manifestations of Imbalance Caused by Damaged Connective Tissue.....                                                   | 44 |
| 2.3.4 The Role of Connective Tissue in Anorectal Opening, Closure and 'Idiopathic'<br>Faecal Incontinence.....                     | 45 |
| Existing Concepts for Anorectal Closure, Opening, and Faecal Incontinence .....                                                    | 46 |
| Anorectal Function According to the Integral Theory .....                                                                          | 46 |
| Connective Tissue Laxity and Anorectal Dysfunction .....                                                                           | 48 |
| The Role of Striated Muscle in Faecal Incontinence .....                                                                           | 49 |
| 'Constipation' .....                                                                                                               | 49 |
| Dislocation of Anal Mucosa.....                                                                                                    | 50 |
| 2.4 Summary Chapter 2.....                                                                                                         | 50 |

|                                                                                                                          |           |

| <b>Chapter 3 – Diagnosis of Connective Tissue Damage</b>                                                                 | <b>51</b> |
| 3.1 The Integral Theory Diagnostic System: Overview                                                                      | 51        |
| 3.2 The Integral Theory Diagnostic System                                                                                | 54        |
| 3.2.1 The Clinical Assessment Pathway                                                                                    | 54        |
| Introduction                                                                                                             | 54        |
| Using the Clinical Assessment Pathway in a Clinical Assessment                                                           | 54        |
| 3.2.2 The Structured Assessment Pathway                                                                                  | 55        |
| Introduction                                                                                                             | 55        |
| Phase One: Data Collection and Correlation                                                                               | 58        |
| Phase Two: Data Analysis                                                                                                 | 62        |
| Phase Three: Verification Using 'Simulated Operations'                                                                   | 63        |
| Deciding which Structural Defects to Repair Surgically in 'Difficult' Cases                                              | 67        |
| 3.3 Working with Symptoms in the Integral Theory Diagnostic System                                                       | 67        |
| 3.3.1 The Reliability of symptoms                                                                                        | 67        |
| 3.3.2 The Variability of Symptoms in Patients with Similar Anatomical Defects                                            | 69        |
| 3.3.3 Assessing Probability: The Impact of Different Structures on the Variability of Incontinence Symptoms              | 69        |
| 3.3.4 The Anatomical Basis for the Diagnostic Summary Sheet                                                              | 71        |
| Anterior Zone Defect Symptoms                                                                                            | 71        |
| Middle zone defect symptoms                                                                                              | 72        |
| Posterior zone defect symptoms                                                                                           | 72        |
| Diagnosing Causes of Symptom Recurrence after Surgery                                                                    | 75        |
| 3.3.5 An Anatomical Basis For ICS Definitions and Descriptions                                                           | 76        |
| The Role of the Peripheral Neurological Control Mechanism in the 'Unstable Open' State                                   | 77        |
| Motor Urgency (Anterior, Middle & Posterior Zones)                                                                       | 78        |
| Nocturia – Posterior Defect                                                                                              | 78        |
| Sensory Urgency (Posterior, Middle, Anterior Zone Defects)                                                               | 78        |
| Unconscious Incontinence, Continuous Leakage (Anterior, Posterior Zone Defects)                                          | 79        |
| Detrusor Instability (Posterior, Anterior, Middle Zone Defects)                                                          | 79        |
| Unstable Urethra (Posterior, Anterior, Middle Zone Damage)                                                               | 79        |
| Inability to Micturate with Neurological Damage                                                                          | 80        |
| Change of Compliance (posterior, anterior, middle zone defects)                                                          | 80        |
| Bladder Sensation (Posterior, Anterior, Middle Zone Defects)                                                             | 80        |
| Bladder Capacity                                                                                                         | 80        |
| Urethral Function During Storage (Anterior, Posterior Zone Defects)                                                      | 80        |
| Genuine Stress Incontinence (Anterior, Posterior Zone Defects)                                                           | 81        |
| Cough Activated Detrusor Instability                                                                                     | 81        |
| Reflex Incontinence                                                                                                      | 81        |
| Detrusor Acontractility, Underactivity, Overflow Incontinence, Post-Micturition Dribble (Posterior, Middle Zone Defects) | 82        |
| Detrusor/Bladder Neck dyssynergia (Anterior, Posterior Zone Defects)                                                     | 82        |
| 3.4 Summary Chapter 3                                                                                                    | 82        |
| <b>Chapter 4 – Reconstructive Pelvic Floor Surgery According to the Integral Theory</b>                                  | <b>83</b> |
| 4.1 Introduction                                                                                                         | 83        |
| 4.2 The Integral Theory Approach to Reconstructive Pelvic Floor Surgery                                                  | 83        |
| 4.2.1 The Conceptual Bases of Minimally Invasive Pelvic Floor Surgery                                                    | 83        |
| The Indications: Major Prolapse, or Major Symptoms with Minor Prolapse                                                   | 84        |

|                                                                                                      |            |
|------------------------------------------------------------------------------------------------------|------------|
| The Tissues: Conservation and Reinforcement of Tissue .....                                          | 85         |
| The Structure: The Synergistic Interaction of Connective Tissue Components .....                     | 85         |
| The Methods: Avoidance of Post-Operative Pain and Urinary Retention .....                            | 85         |
| The Tools: Reinforcement of Damaged Collagenous Tissues. ....                                        | 86         |
| A Tissue Fixation System .....                                                                       | 88         |
| A Clarification: 'Tension-free' Tapes are not 'without Tension' .....                                | 89         |
| 4.2.2 The Surgical Principles of the Integral Theory .....                                           | 90         |
| Introduction .....                                                                                   | 90         |
| Conservation and Reinforcement of Tissue: Implications for Surgery .....                             | 91         |
| Adapting Surgical Technique for Wound Healing, Tissue Weakness and Scarring. ....                    | 91         |
| Patient Care Issues Specific to Day-Care Pelvic Floor Surgery .....                                  | 93         |
| 4.2.3 Surgical Practice According to the Integral Theory .....                                       | 95         |
| Correction of Connective Tissue Damage .....                                                         | 95         |
| Repair of Damaged Ligaments through Creation of Artificial Neoligaments .....                        | 96         |
| Repair of Damaged Fascia .....                                                                       | 102        |
| 4.3 Application of the Integral Theory Surgical System according to Zone of Damage .....             | 110        |
| 4.3.1 Surgery of the Anterior Zone .....                                                             | 110        |
| The Structures of the Anterior Zone. ....                                                            | 110        |
| The Methods: Strengthening a Weakened Pubourethral Ligament with a Tape .....                        | 112        |
| Potential Intra-Operative Complications of Mid-urethral 'Tension-Free' Tape Slings .....             | 119        |
| Testing for Continence at the End of Midurethral Tape Operations .....                               | 120        |
| 4.3.2 Surgery of the Middle Zone .....                                                               | 120        |
| The Structures of the Middle Zone. ....                                                              | 120        |
| Sites of damaged fascia .....                                                                        | 122        |
| The Indications for Surgery in the Middle Zone. ....                                                 | 125        |
| The Methods - Surgical Repair of the Middle Zone. ....                                               | 125        |
| 4.3.3 Surgery of the Posterior Zone .....                                                            | 142        |
| The Structures of the Posterior Zone .....                                                           | 142        |
| Indications for Posterior Zone Surgery: Damage to the Uterosacral Ligaments. ....                    | 148        |
| The Methods: Surgical Repair of the Posterior Zone .....                                             | 148        |
| Repair of Rectovaginal Fascia (level 2) and Perineal Body (PB) (level 3). ....                       | 155        |
| Potential Complications of Posterior Zone Repair. ....                                               | 159        |
| 4.4 Post Operative Monitoring: Strategies For Managing Recurrent Or New Symptoms .....               | 160        |
