

Vidar Thomée

Galerkin Finite Element Methods for Parabolic Problems

Second Edition

 Springer

Table of Contents

Preface	V
Preface to the Second Edition	IX
1. The Standard Galerkin Method	1
2. Methods Based on More General Approximations of the Elliptic Problem	25
3. Nonsmooth Data Error Estimates	37
4. More General Parabolic Equations	55
5. Negative Norm Estimates and Superconvergence	67
6. Maximum-Norm Estimates and Analytic Semigroups	81
7. Single Step Fully Discrete Schemes for the Homogeneous Equation	111
8. Single Step Fully Discrete Schemes for the Inhomogeneous Equation	129
9. Single Step Methods and Rational Approximations of Semigroups	149
10. Multistep Backward Difference Methods	163
11. Incomplete Iterative Solution of the Algebraic Systems at the Time Levels	185
12. The Discontinuous Galerkin Time Stepping Method	203
13. A Nonlinear Problem	231
14. Semilinear Parabolic Equations	245

XII Table of Contents

15. The Method of Lumped Masses	261
16. The H^1 and H^{-1} Methods	279
17. A Mixed Method	293
18. A Singular Problem	305
19. Problems in Polygonal Domains	317
20. Time Discretization by Laplace Transformation and Quadrature	335
References	355
Index	369
