Planck Scale Effects in Astrophysics and Cosmology

 Springer

Contents

Planck Scale Kinematics and the Pierre Auger Observatory

<i>R. Aloisio, P. Blasi, A. Galante, A.F. Grillo</i>	1
1 Motivations	1
2 Introduction	3
3 The Experimental Data and the Pierre Auger Observatory	5
4 The Particle Production Thresholds	13
5 Discussion: Phenomenology, and: Will CR Experiments Detect Lorentz Violations?	15
6 A More Speculative View: Space-Time Indetermination	16
6.1 The Effect of Space-Time Fluctuations on the Propagation of High Energy Particles	16
6.2 Astrophysical Observations	20
6.3 A Fluctuating Space-Time can Make the World Unstable	22
6.4 Discussion	25
References	29

Quantum Gravity

<i>E. Alvarez</i>	31
1 General Questions on Quantum Gravity	31
2 The Issue of Background Independence	32
3 The Canonical Approach	33
4 Using Ashtekar and Related Variables	39
4.1 Big Results of this Approach	41
5 Euclidean Quantum Gravity	42
6 Perturbative (Graviton) Approach	43
7 Strings	44
7.1 Big Results	47

7.2	The Maldacena Conjecture	47
8	Dualities and Branes	48
9	Summary: the State of the Art in Quantum Gravity	53
	References	54

Introduction to Quantum-Gravity Phenomenology

<i>G. Amelino-Camelia</i>	59
1 From “Quantum Gravity Beauty Contests” to Quantum Gravity Phenomenology	59
2 Quantum Gravity Phenomenology	61
2.1 Planck-Scale Quantum Properties of Spacetime	61
2.2 Identification of Experiments	63
2.3 Prehistory of Quantum Gravity Phenomenology	65
2.4 The Dawn of Quantum Gravity Phenomenology	67
2.5 The Maturity of Quantum Gravity Phenomenology: Test Theories	68
3 Some Candidate Quantum-Gravity Effects	69
3.1 Planck-Scale Departures from Lorentz Symmetry	69
3.2 Planck-Scale Departures from CPT Symmetry	70
3.3 Distance Fuzziness	71
3.4 Aside on the Differences Between Systematic and Nonsystematic Effects	71
4 A Prototype Exercise: Modified Dispersion Relations	72
4.1 Modified Dispersion Relations in Canonical Noncommutative Spacetime	72
4.2 Modified Dispersion Relations in κ -Minkowski Noncommutative Spacetime	74
4.3 Modified Dispersion Relation in Loop Quantum Gravity	75
4.4 Some Issues Relevant for the Proposal of Test Theories	76
4.5 A Test Theory for Pure Kinematics	79
4.6 The Minimal AEMNS Test Theory	81
4.7 A Test Theory Based on Low-Energy Effective Field Theory ..	82
4.8 The Minimal GPMP Test Theory	86
4.9 Derivation of Limits from Analysis of Gamma-Ray Bursts	87
4.10 Derivation of Limits from Analysis of UHE Cosmic Rays	89
4.11 Derivation of Limits from Analysis of Photon Stability	92
4.12 Derivation of Limits from Analysis of Synchrotron Radiation	93
5 Summary and Outlook	95
References	98

Astrophysical Bounds on Planck Suppressed Lorentz Violation

<i>T. Jacobson, S. Liberati, D. Mattingly</i>	101
1 Windows on Quantum Gravity?	101

2	Lorentz Violation	102
2.1	The GZK Cut-Off	102
2.2	Possible LV Phenomena	104
2.3	A Brief History of Some LV Research	104
3	Theoretical Framework for LV	105
3.1	Deformed Dispersion Relations	107
3.2	Effective Field Theory and LV	108
3.3	Naturalness of Small LV at Low Energy?	109
4	Reaction Thresholds and LV	110
5	Constraints	113
5.1	Constraints on Renormalizable Terms	114
5.2	Summary of Constraints on LV in QED at $O(E/M)$	114
5.3	Constraints at $O(E/M)$ from UHE Cosmic Rays	123
5.4	Constraints at $O(E^2/M^2)$?	124
6	Conclusion	125
	References	125

Introduction to Doubly Special Relativity

<i>J. Kowalski-Glikman</i>	131
1 Introduction	131
2 DSR from Quantum Gravity?	133
3 Doubly Special Relativity and the κ -Poincaré Algebra	142
3.1 Space-Time of DSR	144
3.2 From DSR Theory to DSR Theories	146
4 Physics with Doubly Special Relativity	150
4.1 Time-of-Flight Experiments and the Issue of Velocity in DSR ..	150
4.2 Remarks on Multi-Particle Systems	153
5 Conclusion	156
References	157

Interferometry as a Universal Tool in Physics

C.	Lämmerzahl	161
1	Introduction	161
2	The Importance of Interferometry	163
3	Atomic Interferometry	168
3.1	The Beam Splitter	168
3.2	Interaction with the Gravitational Field	169
3.3	Rotation – The Sagnac Effect	170
3.4	Coupling to the Gravity Gradient	171
3.5	Tests of Relativistic Gravity	173
3.6	Tests of the Einstein Equivalence Principle	180
4	Test of Anomalous Dispersion Relation	184
4.1	Tests with Laser Interferometry	184
4.2	Tests with Atomic Interferometry	189
5	Test of Space-Time Fluctuations	190

5.1	Atom and Neutron Interferometry	190
5.2	Laser Interferometry	192
	References	195

Inflationary Cosmological Perturbations of Quantum-Mechanical Origin

<i>J. Martin</i>		199
1	Introduction	199
2	The Inflationary Universe	200
2.1	Basic Equations	200
2.2	The Inflationary Hypothesis	201
2.3	Implementing the Inflationary Hypothesis	202
2.4	Slow-roll Inflation	203
2.5	Reheating	206
3	Cosmological Perturbations	210
3.1	General Framework	210
3.2	Equations of Motion	214
3.3	The Sachs-Wolfe Effect	218
4	Quantization of Cosmological Perturbations	222
4.1	Quantization of a Free Scalar Field	222
4.2	Quantization of Density Perturbations	228
4.3	Quantization of Gravitational Waves	230
4.4	The Power Spectra in the Slow-roll Approximation	231
5	Comparison with Observations	233
6	The Trans-Planckian Problem of Inflation	235
6.1	Modified Dispersion Relations	238
6.2	The Minimal Approach	239
	References	243

CPT Violation and Decoherence in Quantum Gravity

<i>N.E. Mavromatos</i>		245
1	Introduction and Summary	245
2	Theoretical Motivation for CPT Violation and Formalism	250
2.1	The CPT Theorem and How It May Be Evaded	250
2.2	\$ Matrix and Strong CPT Violation (CPTV)	252
2.3	CPT Symmetry without CPT Symmetry?	254
2.4	Decoherence and Purity of States under Evolution	255
2.5	More General Case: Dynamical Semi-Group Approach to Decoherence, and Evolution of Pure States to Mixed	257
2.6	State Vector Reduction ("Wavefunction Collapse") in Lindblad Decoherence	259
2.7	Non-Critical String Decoherence: a Link between Decoherent Quantum Mechanics and Gravity?	261
2.8	Cosmological CPTV?	265

3	Phenomenology of CPT Violation	269
3.1	Order of Magnitude Estimates of CPTV	269
3.2	Mnemonic Cubes for CPTV Phenomenology	270
3.3	Lorentz Violation and CPT: The Standard Model Extension (SME)	270
3.4	Direct SME Tests and Modified Dispersion Relations (MDR) ..	273
3.5	Neutrinos and SME	273
3.6	Lorentz Non-Invariance, MDR and ν -Oscillations	275
3.7	Lorentz Non Invariance, MDR and ν Spin-Flavor Conversion ..	276
3.8	ν -Flavour States and Modified Lorentz Invariance (MLI)	277
3.9	CPTV and Departure from Locality for Neutrinos	279
3.10	Four-Generation ν Models with CPTV	281
3.11	CPTV Through QG Decoherence: Neutral Mesons	284
3.12	EPR Entangled Neutral Meson States and Novel Decoherence-Induced CPT Violating Effects	292
3.13	CPTV Decoherence and Ultra Cold Neutrons	296
3.14	CPTV Through QG Decoherence for Neutrinos: the Most Sensitive Probe to Date	298
4	Conclusions	312
	References	314

Quantum Foam and Quantum Gravity Phenomenology

<i>Y. Jack Ng</i>	321
1 Introduction	321
2 Quantum Fluctuations of Spacetime	323
2.1 Gedanken Experiment	323
2.2 The Holographic Principle	326
2.3 Quantum Gravity Models	329
2.4 Cumulative Effects of Spacetime Fluctuations	331
3 Clocks, Computers, and Black Holes	332
3.1 Clocks	332
3.2 Computers	333
3.3 Black Holes	334
3.4 Results for Arbitrary Dimensions	336
4 Energy-Momentum Uncertainties	337
5 Spacetime Foam Phenomenology	339
5.1 Phase Incoherence of Light from Extra-galactic Sources	339
5.2 High Energy γ Rays from Distant GRB	341
5.3 Interferometry Techniques	341
5.4 Ultra-High Energy Cosmic Ray Events	344
6 Summary and Conclusions	347
References	348

Gamma-Ray Bursts as Probes for Quantum Gravity

T. Piran 351

1 Introduction 351

2 An Energy Dependent Speed of Light 351

3 On the Detection
 of Energy Dependent Time Lags Due
 to an Energy Dependent Speed of Light 352

4 Gamma-Ray Bursts 355

5 GRB Observations and Testing
 of a Variable Speed of Light 356

6 Caveat, Past Observations and Future Prospects 358

References 361

Loop Quantum Gravity and Planck Scale Phenomenology

L. Smolin 363

1 Introduction 363

2 What Should Theory Predict for Phenomenology 364

3 Does Loop Quantum Gravity Make Predictions
 for Planck Scale Phenomenology? 368

4 The Basic Ideas of Loop Quantum Gravity 369

5 Gravity as a Gauge Theory 372

6 The de Sitter Solution as a Gauge Field 375

7 Hamilton-Jacobi Theory, de Sitter Spacetime
 and Chern-Simons Theory 377

8 General Relativity
 as a Constrained Topological Field Theory 378

9 Boundaries with $\Lambda > 0$ and Chern-Simons Theory 385

10 The Kodama State 386

 10.1 A Brief Review of Quantization 386

 10.2 The Kodama State 388

11 The Thermal Nature
 of Quantum Gravity with $\Lambda > 0$ 390

12 The Recovery of QFT on de Sitter Spacetime 392

13 Gravitons from Perturbations Around
 the Kodama State 395

14 Corrections to Energy Momentum Relations 397

15 Conclusions and Further Developments 402
