Preface	5	2.4	Path of the signal from the sensor to the effector	55	
Vitae	7	2.4.1	Processes at the sensor and at the trigger zone: from the generator potential to the frequency-coded signal	55	
Abbreviations	8	2.4.2	Excitation propagation: slow continuous propagation and saltatory excitation propagation .	56	
Addresses	22	2.4.3	Transmission of excitation, synaptic transmission	59	
		2.4.4	Processes at the target cell, postsynaptic potentials	61	
		2.4.5	Integration of signals	63	
		2.5	Reflexes	65	
Cells and excitable tissues					
1	Cell physiology	25	3	Sensory physiology	67
	<i>Bernd Schröder, Christoph Rummel</i>			<i>Heinz Breer, Cornelia A. Deeg, Michael Pees, Helga Pfannkuche, Holger Sann</i>	
1.1	Basics of cell physiology	25	3.1	General sensory physiology	67
1.2	The cell as the smallest functional unit of a living animal	25		<i>Heinz Breer</i>	
1.3	Subcellular organisation of the cell	25	3.1.1	General principles of sensory physiology	67
1.3.1	Intracellular organelles and the principle of compartmentalization	26	3.2	Cutaneous senses	71
1.3.2	Cell membrane	27		<i>Helga Pfannkuche</i>	
1.3.3	Topography of membrane proteins	28	3.2.1	Mechanoreception in the skin	71
1.3.4	Mobility of membrane proteins	29	3.2.2	Thermoreception in the skin	74
1.3.5	Anchoring of membrane proteins	29	3.2.3	Nociception and itching	74
1.3.6	Cytoskeleton	29	3.2.4	Transmission and central processing of signals from the skin	75
1.3.7	Cell-cell connections	29	3.3	Nociception and pain	76
1.4	Functions of the cell membrane	31		<i>Holger Sann</i>	
1.4.1	Barrier between intra- and extracellular space	31	3.3.1	Pain in animals	76
1.4.2	Transport by diffusion	32	3.3.2	Peripheral mechanisms of nociception	77
1.4.3	Transport via membrane proteins	32	3.3.3	Central mechanisms of nociception	79
1.4.4	Transport by endo- and exocytosis	34	3.3.4	Plasticity of nociception	80
1.5	Membrane potential	34	3.3.5	Pain management	82
1.5.1	Diffusion potentials and K⁺ equilibrium potential	34	3.4	Balance and hearing	83
1.5.2	Nernst equation	36		<i>Heinz Breer</i>	
1.5.3	Goldman-Hodgkin-Katz equation	36	3.4.1	The sensory systems of the inner ear	83
1.6	Regulation of specialized cell functions	37	3.4.2	Sense of balance, vestibular organ	84
1.6.1	Cell volume regulation	37	3.4.3	The sense of hearing	85
1.6.2	Intracellular pH regulation	37	3.4.4	Cochlea	87
1.6.3	Signal action and processing	38	3.4.5	Neuronal processing of auditory signals	89
1.6.4	Cell cycle, growth and apoptosis	41	3.5	Vision	89
				<i>Cornelia A. Deeg</i>	
2	General neurophysiology	43	3.5.1	Structure of the eye	90
	<i>Martin Diener, Bernd Schröder</i>		3.5.2	Reflex sequences	92
2.1	Tasks of the nervous system	43	3.5.3	Signal reception and processing of light stimuli in the retina	93
2.2	Neural tissue	43	3.5.4	Tapetum lucidum	95
2.2.1	Structure and functional properties of the neuron	43	3.5.5	Adaptation mechanisms	96
2.2.2	Functions of the glial cells	44	3.5.6	Colour vision	96
2.3	Basic principles of excitation of neurons	46	3.5.7	Central processing	97
2.3.1	Definitions	46	3.5.8	Pathophysiology	99
2.3.2	Passive membrane response to subthreshold stimuli	46	3.6	Chemical senses: sense of smell and taste ..	100
2.3.3	Active membrane response to suprathreshold stimuli: the action potential	48		<i>Heinz Breer</i>	
2.3.4	Ionic basis of the action potential	49	3.6.1	Sense of smell (olfactory sense)	100
			3.6.2	Sense of taste	105

7.5.4	Electrical heart axis	186	9.3	Cellular components.	224
7.6	Cardiac disorders	187		<i>Max Gassmann, Thomas A. Lutz</i>	
7.6.1	Cardiac arrhythmias	188	9.3.1	Haematopoiesis	224
7.6.2	Electrolytes	190	9.3.2	Erythrocytes	227
			9.3.3	Leukocytes	233
8	The circulatory system	191	9.4	Haemostasis and blood clotting	234
	<i>Michael Pees, Helga Pfannkuche,</i>			<i>Bernd Kaspers, Thomas Göbel</i>	
	<i>Wolfgang von Engelhardt</i>		9.4.1	Vasoconstriction	234
8.1	Tasks of the cardiovascular system	191	9.4.2	Formation of a thrombocyte aggregate	234
	<i>Wolfgang von Engelhardt</i>		9.4.3	Coagulation	236
8.2	Circulatory systems and vessel walls	191	9.4.4	Pathophysiology	240
	<i>Wolfgang von Engelhardt</i>		9.5	Blood groups	241
8.3	Biophysical basis of haemodynamics	193		<i>Thomas Göbel, Bernd Kaspers</i>	
	<i>Wolfgang von Engelhardt</i>		9.5.1	The human ABO system	241
8.3.1	Flow rate, pressure, resistance	193	9.5.2	Rhesus system of the human being	242
8.3.2	Characteristics of blood flow	194	9.5.3	Blood groups of animals	242
8.3.3	Viscosity of the blood	195			
8.3.4	Compliance of the blood vessels	196	10	Immune defence –	
8.4	Haemodynamics in the individual vascular			the immune system	244
	systems	197		<i>Thomas Göbel, Bernd Kaspers</i>	
	<i>Wolfgang von Engelhardt</i>		10.1	Functions of the immune system	244
8.4.1	The arterial system	197	10.2	Introduction – Cells and chemical	
8.4.2	The venous system	202		messengers of the immune system	244
8.4.3	The microcirculation in the terminal vascular		10.2.1	Pathogens activate the immune system	244
	bed	203	10.2.2	Innate and acquired immunity	244
8.4.4	Lymphatic system	207	10.2.3	Blood cell differentiation	245
8.5	Regulation of blood circulation	208	10.2.4	Cytokines	245
	<i>Wolfgang von Engelhardt</i>		10.3	Innate immune mechanisms	246
8.5.1	Local blood flow regulation	208	10.3.1	Natural barriers	247
8.5.2	Central regulation of blood circulation	210	10.3.2	Soluble factors	247
8.6	Distribution and regulation of blood volume	212	10.3.3	Complement system	247
	<i>Wolfgang von Engelhardt</i>		10.3.4	Opsonisation and phagocytosis	248
8.7	Special features of the pulmonary		10.3.5	Recognition of pathogens by toll-like	
	circulation	213		receptors	249
	<i>Wolfgang von Engelhardt</i>		10.3.6	Effector functions of cells of the innate	
8.8	Circulatory failure, shock	214		immune system	249
	<i>Wolfgang von Engelhardt</i>		10.3.7	Inflammatory response	250
8.9	Foetal circulation and circulatory changes		10.4	Acquired immune mechanisms	251
	during and after birth	214	10.4.1	Features of acquired immune mechanisms ..	251
	<i>Wolfgang von Engelhardt</i>		10.4.2	Formation and maturation of lymphocytes ..	252
8.10	Cardiovascular system in birds and reptiles .	215	10.4.3	Migration of lymphocytes and clonal	
	<i>Helga Pfannkuche, Michael Pees</i>			expansion	252
8.10.1	Cardiovascular system in birds	215	10.4.4	Immunoglobulins – structure, isotypes,	
8.10.2	Cardiovascular system in reptiles	216		properties	252
			10.4.5	Antigen-specific receptors of B and	
9	Blood	218		T lymphocytes	255
	<i>Max Gassmann, Thomas Göbel, Bernd Kaspers,</i>		10.4.6	Receptor diversity	256
	<i>Thomas A. Lutz</i>		10.4.7	MHC proteins and selection in the thymus ...	257
9.1	Functions of blood	218	10.4.8	MHC I proteins and cytotoxic T cell response .	258
	<i>Max Gassmann, Thomas A. Lutz</i>		10.4.9	MHC II proteins and CD4 ⁺ T helper cells	259
9.2	Non-cellular components of the blood	219	10.4.10	Immune regulation	260
	<i>Max Gassmann, Thomas A. Lutz</i>		10.5	Innate and acquired immune mechanisms	
9.2.1	Blood plasma	219		cooperate in immune defence	260
9.2.2	Electrolytes of plasma	219			
9.2.3	Plasma proteins	220			
9.2.4	Non-protein nitrogen compounds (NPN)	222			
9.2.5	Carbohydrates	223			
9.2.6	Lipids and fatty acids	223			
9.2.7	Other blood constituents	223			

11	Respiration	261	11.12	Respiration in birds	299
	<i>Gerolf Gros, Michael Pees, Helga Pfannkuche</i>			<i>Helga Pfannkuche, Michael Pees</i>	
11.1	Gas exchange	261	11.12.1	Subdivision of the respiratory system	299
	<i>Gerolf Gros</i>		11.12.2	Ventilation	299
11.2	Morphological basis of lung respiration in mammals	262	11.12.3	Gas exchange.....	300
	<i>Gerolf Gros</i>		11.12.4	Regulation of respiration	301
11.2.1	Airways.....	262	11.13	Acknowledgement	302
11.2.2	Morphological basis of inspiration and expiration	263			
11.2.3	Transmission thorax – lungs – pleurae	264			
11.2.4	Alveolocapillary barrier	264			
11.3	Ventilation and lung volumes	265			
	<i>Gerolf Gros</i>				
11.3.1	Volumes and capacities	265			
11.3.2	Measurement of lung volumes and capacities	266			
11.3.3	Dead space.....	267			
11.3.4	Ventilation	268			
11.4	Mechanics	270			
	<i>Gerolf Gros</i>				
11.4.1	Elastic resistances	270			
11.4.2	Viscous resistances	273			
11.5	Gas transport in blood	275			
	<i>Gerolf Gros</i>				
11.5.1	Oxygen transport.....	275			
11.5.2	CO ₂ transport.....	280			
11.6	Gas exchange	282			
	<i>Gerolf Gros</i>				
11.7	Tissue respiration (internal respiration)	286			
	<i>Gerolf Gros</i>				
11.7.1	O ₂ supply and O ₂ consumption in the tissues	286			
11.7.2	Disorders of O ₂ supply.....	288			
11.7.3	Tissue hypoxia in diving mammals	289			
11.7.4	Time course of cell damage in acute anoxia ..	289			
11.7.5	Cell damage due to reactive oxygen species. .	290			
11.8	Regulation of respiration	291			
	<i>Gerolf Gros</i>				
11.8.1	Rhythmogenesis	291			
11.8.2	Respiratory reflexes	291			
11.8.3	Chemical respiratory regulation	291			
11.8.4	Respiratory regulation at work	293			
11.8.5	Panting.....	293			
11.9	Comparative pathophysiology of lung function in domestic animals	294			
	<i>Gerolf Gros</i>				
11.9.1	Obstructive lung diseases	294			
11.9.2	Restrictive lung diseases	294			
11.10	Respiration in fish	295			
	<i>Helga Pfannkuche, Michael Pees</i>				
11.10.1	Gas exchange in water.....	295			
11.10.2	Ventilation	295			
11.10.3	Gas exchange.....	296			
11.10.4	Regulation of respiration	297			
11.11	Respiration in reptiles	297			
	<i>Michael Pees, Helga Pfannkuche</i>				
11.11.1	Structure of the respiratory tract	297			
11.11.2	Ventilation	298			
11.11.3	Gas exchange.....	298			
11.11.4	Regulation of respiration	299			

Regulation of the internal milieu

12	Kidney	303
	<i>Gotthold Gäbel, Salah Amasheh;</i>	
	<i>former collaboration: M. Fromm</i>	
12.1	Role of the kidney	303
12.2	Basics	303
12.3	Morphology	303
12.4	Haemodynamics	305
12.4.1	Blood flow to the kidney	305
12.4.2	Regulation of renal blood flow	306
12.5	Ultrafiltration in the glomeruli	308
12.5.1	Filtration barrier	309
12.5.2	Net filtration pressure	309
12.5.3	Methods for assessing filtration.....	310
12.6	Tubular transport mechanisms: Overview ..	311
12.7	Sodium and chloride movement in the nephron	312
12.7.1	Importance of the kidney for NaCl balance. .	312
12.7.2	Mechanisms of tubular NaCl transport	312
12.7.3	Regulation of sodium transport.....	314
12.8	Potassium movement in the nephron	315
12.8.1	Importance of the kidney for potassium balance.	315
12.8.2	Potassium: filtration, absorption and secretion	315
12.8.3	Regulation of potassium excretion by aldosterone	315
12.8.4	Interactions between potassium and acid-base balance	316
12.9	Water movement in the nephron and urine concentration	317
12.9.1	Quantity and mechanisms.....	317
12.9.2	Countercurrent multiplier system and antidiuresis	317
12.9.3	Pressure diuresis	322
12.10	Movement of calcium and phosphate in the nephron	322
12.11	Glucose reabsorption	323
12.11.1	Importance of glucose transport.....	323
12.11.2	Mechanism of glucose transport.....	323
12.12	Movement of amino acids, oligopeptides and proteins in the nephron	324
12.13	Movement of end products of N metabolism and organic ions in the nephron	324
12.13.1	Urea	324
12.13.2	Uric acid, oxalate, allantoin and hippuric acid.	325
12.13.3	Organic anions and cations	325

16.5	Monogastric stomach	411	17	Physiological functions of the liver ...	463
	<i>Siegfried Wolffram</i>			<i>Herbert Fuhrmann, Axel Schöniger,</i>	
	<i>Hans-Peter Sallmann</i>				
16.5.1	Secretory functions	411	17.1	Role of the liver.....	463
16.5.2	Regulation of gastric secretion	413	17.2	Role of the liver in body metabolism and	
16.5.3	Role of gastric secretions.....	415		functions of different hepatic cells	463
16.5.4	Microbial activity in the stomach	416	17.2.1	Histological structure of the liver	463
16.5.5	Absorption functions of the stomach	416	17.2.2	Cell types	465
16.6	Functions of the small intestine		17.2.3	Regulation of liver function	465
	and its accessory organs	416	17.3	The contribution of the liver to intestinal	
	<i>Siegfried Wolffram</i>			digestion	466
16.6.1	Secretions of the small intestine	416	17.3.1	Synthesis and function of bile acids.....	466
16.6.2	Exocrine pancreas	418	17.3.2	Regulation of bile formation and secretion...	466
16.6.3	Bile secretion and gallbladder function.....	421	17.4	The liver in intermediary metabolism	467
16.6.4	Digestion and absorption of carbohydrates ..	422	17.4.1	Fat synthesis.....	467
16.6.5	Digestion and absorption of proteins	426	17.4.2	Synthesis and function of lipoproteins	467
16.6.6	Digestion and absorption of fats.....	429	17.4.3	Gluconeogenesis	469
16.6.7	Absorption of minerals and trace elements ..	433	17.4.4	Ketogenesis in liver metabolism during	
16.6.8	Microbial activity in the small intestine.....	437		energy deficiency.....	471
16.7	Large intestine	438	17.4.5	Urea synthesis	472
	<i>Gerhard Breves</i>		17.4.6	The role of the liver in the metabolism	
16.7.1	Volume and digesta passage.....	438		of fat-soluble vitamins.....	473
16.7.2	Microbial metabolism	438	17.5	Contribution of the liver to detoxification ..	474
16.7.3	Absorption and secretion	440	17.5.1	Biotransformation by chemical modification .	474
16.8	Pathophysiology of diarrhoea	445	17.5.2	Biotransformation through conjugation	474
	<i>Franziska Dengler, Gotthold Gäbel,</i>		17.5.3	Excretion of endobiotics and xenobiotics	475
	<i>Romy Monika Heilmann</i>		17.5.4	Formation of bile pigments.....	475
16.8.1	Secretory diarrhoea	445	18	Physiological role of adipose tissue...	477
16.8.2	Osmotic diarrhoea	445		<i>Korinna Huber</i>	
16.8.3	Mechanisms.....	445	18.1	Morphology and function	477
16.8.4	Infectious diarrhoea.....	447	18.1.1	Structure of adipose tissue	477
16.8.5	Non-infectious diarrhoea.....	449	18.1.2	Protective function	478
16.8.6	Aetiological classification of diarrhoea	450	18.1.3	Physiological function	478
16.8.7	Therapeutic approach	452	18.2	Metabolic activities of adipose tissue	478
16.9	Comparison of digestion in forestomach		18.2.1	Lipolysis	478
	and large intestine	453	18.2.2	Triacylglycerol synthesis and lipogenesis.....	479
	<i>Wolfgang von Engelhardt</i>		18.3	Endocrine signals of adipose tissue –	
16.9.1	Cellulose digestion in foregut and hindgut			adipocytokines	479
	fermenters	453	18.3.1	Influence on food intake	480
16.9.2	Advantages and disadvantages of foregut		18.3.2	Influence on energy balance	480
	and hindgut fermentation when feeding grass		18.3.3	Influence on reproduction.....	481
	of different quality	453	18.3.4	Influence on systemic inflammation	
16.9.3	Digestion of easily digestible carbohydrates,			and immunity	482
	feed protein and fat in forestomach and				
	large intestine	454	19	Energy balance	483
16.9.4	Body mass of foregut and hindgut fermenters	454		<i>Joachim Roth, Gotthold Gäbel</i>	
16.9.5	Microbial protein synthesis and utilisation		19.1	Energy demand and energy turnover	483
	of the protein formed	455	19.2	Introduction	483
16.10	Digestion in birds and reptiles	456	19.3	Energy content of nutrients.....	485
	<i>Michael Pees, Helga Pfannkuche</i>		19.3.1	Measurement of the energy content	
16.10.1	Digestion in birds.....	456		of nutrients	485
16.10.2	Digestion in reptiles.....	459	19.3.2	Physical calorific values of nutrients	485
			19.3.3	Physiological calorific value	485
			19.3.4	Food as a source of energy	485
			19.4	Measurement of energy metabolism	486
			19.4.1	Direct calorimetry	486
			19.4.2	Indirect calorimetry.....	486

[illegible]

24.2	Reproduction in the female animal	560
	<i>Christine Aurich, Jörg Aurich</i>	
24.2.1	Sexual cycle	560
24.2.2	Gestation	568
24.3	Reproduction in male domestic mammals . .	573
	<i>Christine Aurich</i>	
24.3.1	Testicular function	573
24.3.2	Spermatogenesis and Sertoli cell function . .	576
24.3.3	Sexual behaviour	578
24.4	Fertilisation, sex determination and assisted reproduction	579
	<i>Christine Aurich</i>	
24.4.1	Fertilisation	579
24.4.2	Sex determination	583
24.4.3	Assisted reproduction	586
24.5	Reproduction in birds	587
	<i>Almuth Einspanier, Susanne Reitemeier;</i> <i>former collaboration: A. Weißmann</i>	
24.5.1	Female reproductive organs	587
24.5.2	Egg structure	590
24.5.3	Male reproductive organs	592
24.5.4	Endocrine control of reproduction	594
24.5.5	Reproduction and breeding	597
25	Lactation	601
	<i>Gerhard Breves; former collaboration:</i> <i>H. Hammon, R. M. Bruckmaier</i>	
25.1	The mammary gland	601
25.2	Importance of lactation for care of offspring	601
25.3	Evolutionary development of the mammary gland and milk	601
25.4	Anatomical-histological structure of the mammary gland	602
25.5	Developmental and functional stages of the mammary gland and its endocrine control. .	603
25.5.1	Mammogenesis	603
25.5.2	Colostragenesis	604
25.5.3	Lactogenesis	604
25.5.4	Galactopoiesis	606
25.6	Synthesis and secretion of milk and its components	607
25.6.1	Synthesis of milk fat	608
25.6.2	Synthesis of milk proteins	610
25.6.3	Synthesis of lactose	611
25.7	Milk composition in different species	611
25.8	Milk storage and milk ejection	612
25.8.1	Oxytocin release and milk ejection in the dairy cow.	613
25.8.2	Milk ejection in goat, sheep, pig and horse. .	615
25.8.3	Disorders of milk ejection in cattle	615
25.9	Importance of mammary gland milk for postnatal development	615
25.10	Energy metabolism during lactation	615

Performance physiology

26	Equine exercise physiology as an example for performance physiology.	617
	<i>Wolfgang von Engelhardt</i>	
26.1	Various performances.	617
26.2	The working muscle	617
26.2.1	Energy metabolism of the working muscle. .	617
26.2.2	Oxygen deficit at the start of work and oxygen debt at the end	618
26.2.3	Where does the required ATP come from for the various types of performance of sport horses?	619
26.2.4	Muscle fibre types	619
26.3	Aerobic metabolism and endurance	621
26.3.1	Oxygen uptake, resting metabolic rate and metabolic rate at work	621
26.3.2	Breathing and synchronisation of breathing through the frequency of footfalls at canter. .	622
26.3.3	Can horses optimise their efficiency of work by changing running speeds?	624
26.3.4	Heart rate, cardiac output and arterial blood pressure	624
26.3.5	Haemoglobin concentration and oxygen transport capacity of blood	626
26.3.6	Muscle circulation	626
26.4	Anaerobic metabolism, fatigue and blood lactate concentration	627
26.5	Thermoregulation and sweat secretion . . .	627
26.6	Influence of training on aerobic metabolism, heart and circulation, skeletal muscle and thermoregulation	629
26.6.1	Haemoglobin concentration and oxygen transport capacity	629
26.6.2	Heart size, stroke volume and heart rate . . .	629
26.6.3	Oxygen intake	629
26.6.4	Skeletal muscle	630
26.6.5	Sweat secretion and thermoregulation	630
26.7	Assessment of the training condition and performance of sport horses	630

Appendix

27	Measured quantities and units of measurement.	632
	<i>Martin Diener, Gotthold Gäbel, Gerhard Breves, David Fraser</i>	
27.1	Greek letters	632
27.2	Exponentiation and logarithms	632
27.3	International System of Units (SI)	633
27.4	Older units of measurement	633
	Index	634
