Introduction	1
1 General Problem Formulation of Wind Wave Modelling in a Non-Uniform Ocean	11
1.1 Hydrodynamic Problem of Surface Wave Generation by Air Flow	11
1.2 Geometric Optics Approximation	14
1.3 Wave Action Conservation Law	18
1.4 Statistical Wind Wave Description	23
1.5 Kinetic Equation of the Evolution of the Wind Wave Spectrum	25
1.6 General Problem Formulation for Determining the Wave Action Spectral Density in the Ocean	28
1.7 Spatial–Temporal Scale Considerations in the Analysis of Problem Solution	32
2 Mathematical Simulation of Wave Propagation at Global Distances	35
2.1 Problem Formulation of Ocean Wind Wave Modelling Using Spherical Variables	35
2.2 Correspondence of Local and Global Coordinate Systems	38
2.3 Numerical Simulation of Swell Propagation Using the Method of Characteristics	39
2.4 The Influence of Current on the Evolution of Waves at the Global Scale	44
3 Numerical Implementation of the Wave Energy Balance Equation	49
3.1 Statement of the Problem	49
3.2 Formulation of the Wave Propagation Problem	51
3.3 Standard Numerical Propagation Schemes	53
3.4 Elimination of the “Garden Sprinkler Effect”	54
3.5 Interpolation-Ray (INTERPOL) Method	59
3.6 Comparison of Results of Numerical Wave Propagation Schemes	60

3.7	Numerical Integration of the Source Function	65
3.8	Conclusions	78
4	Study of Physical Mechanisms	
	Forming the Wind Wave Energy Spectrum	
	in Deep Water	81
4.1	Non-Linear Energy Transfer in Wind Wave Spectrum	81
4.1.1	Problem Review	81
4.1.2	Optimal Algorithm of Computation of Non-linear Energy Transfer	85
4.1.3	Calculation Results of Non-linear Energy Transfer in Wind Wave Spectrum	92
4.1.4	Numerical Study of Non-Stationary Solution of the Hasselmann Equation	105
4.2	Wind Wave Energy Input	123
4.3	Wave Energy Dissipation in Deep Water	127
4.4	Influence of Mesoscale Effects on Wind Wave Evolution	136
5	Wave Evolution in Non-uniform Currents in Deep Water .	153
5.1	Formulation of the Problem in the Local Coordinate System .	153
5.2	Frequency-Angular Spectrum Evolution in a Current	155
5.3	Spectral Model of Rips	164
5.4	Estimation of Non-Linear Wave Interaction in the Rip Spectrum	175
5.5	Wave Element Transformations in Current, Varying Along its Direction	183
5.6	Wave Diffraction Around a Caustic	190
5.7	Wind Wave Transformation in Cross-Velocity Shear Current .	198
5.8	Freak Wave Problem	217
5.9	Influence of Vertical Non-Uniform Current on Wind Wave Transformation	225
5.10	Wind Wave Generation in a Current	237
5.11	Some Practical Recommendations for Estimation of Current Influence on Waves	247
6	Wave Transformation in Shallow Water	253
6.1	Spectrum Transformation Due to Wave Refraction in Shallow Water	253
6.2	Weak Non-Linear Wave Interaction in Shallow Water	261
6.3	Joint Influence of Bottom and a Non-Uniform Current on Wave Transformation	268
6.4	Wave Energy Dissipation in Shallow Water	285
6.5	Numerical Model of Wind Wave Transformation in a Coastal Area	293

6.6	Wind Wave Spectrum Transformation According to the Black Sea International Experiment	302
7	Wave Transformation in Ice-Covered Water	315
7.1	Wave Problem Formulation in Water with Ice Cakes	315
7.2	Wave Spectrum Evolution in Water with Ice Cakes	317
7.3	Kinetic Equation for Non-linear Waves in Sea with Ice Cakes	324
7.4	Estimation of Non-Linear Energy Transfer in the Wave Spectrum in Water with Ice Cakes	332
7.5	Numerical Simulation of Surface Gravity Wave Interaction with Elastic Ice Floes	335
8	Conclusion	347
	Bibliography	351
	Index	371
