

Friedrich Hirzebruch

Topological Methods in Algebraic Geometry

Reprint of the 1978 Edition

Springer

Contents

Introduction	1
Chapter One. Preparatory material	
§ 1. Multiplicative sequences	9
§ 2. Sheaves	16
§ 3. Fibre bundles	37
§ 4. Characteristic classes	49
Chapter Two. The cobordism ring	
§ 5. PONTRJAGIN numbers	76
§ 6. The ring $\tilde{\Omega} \otimes \mathbb{Q}$	78
§ 7. The cobordism ring Ω	81
§ 8. The index of a $4k$ -dimensional manifold	84
§ 9. The virtual index	86
Chapter Three. The TODD genus	
§ 10. Definition of the TODD genus	91
§ 11. The virtual generalised TODD genus	94
§ 12. The T -characteristic of a $GL(q, \mathbb{C})$ -bundle	96
§ 13. Split manifolds and splitting methods	100
§ 14. Multiplicative properties of the TODD genus	107
Chapter Four. The RIEMANN-ROCH theorem for algebraic manifolds	
§ 15. Cohomology of compact complex manifolds	114
§ 16. Further properties of the χ_y -characteristic	128
§ 17. The virtual χ_y -characteristic	132
§ 18. Some fundamental theorems of KODAIRA	138
§ 19. The virtual χ_y -characteristic for algebraic manifolds	142
§ 20. The RIEMANN-ROCH theorem for algebraic manifolds and complex analytic line bundles	147
§ 21. The RIEMANN-ROCH theorem for algebraic manifolds and complex analytic vector bundles	155
Appendix One by R. L. E. SCHWARZENBERGER	
§ 22. Applications of the RIEMANN-ROCH theorem	159
§ 23. The RIEMANN-ROCH theorem of GROTHENDIECK	166
§ 24. The GROTHENDIECK ring of continuous vector bundles	176
§ 25. The ATIYAH-SINGER index theorem	184
§ 26. Integrality theorems for differentiable manifolds	196
Appendix Two by A. BOREL	
A spectral sequence for complex analytic bundles	202
Bibliography	218
Index	227
