

Contents

1 Introduction.....	1
1.1 Dynamics	1
1.2 Formulation of Dynamic Analysis	3
1.2.1 DAE vs. ODE.....	4
1.2.2 Recursive formulations	6
1.2.3 Velocity transformation methods	7
1.3 Balancing of Mechanisms.....	10
2 Dynamics of Open-loop Systems	11
2.1 Kinematic Constraints in Serial Systems	11
2.2 Kinematic Constraints in Tree-type Systems	16
2.3 Equations of Motion.....	19
2.4 Constraint Wrench for Serial Systems	22
2.5 Constraint Wrench in Tree-type Systems.....	25
2.6 Algorithm for Constraint Wrenches	26
2.7 Applications	29
2.7.1 Two-link manipulator.....	29
2.7.2 Four link gripper	32
2.7.3 Two six-link manipulators	37
2.8 Summary	40
3 Dynamics of Closed-loop Systems	45
3.1 Equations of Motion.....	45
3.1.1 Spanning tree.....	46
3.1.2 Determinate and indeterminate subsystems	48
3.1.3 The DeNOC matrices for the spanning tree	49
3.1.4 Constrained equations of motion for a subsystem.....	49
3.1.5 Constrained equations of motion for the spanning tree.....	52
3.2 Algorithm for Constraint Wrenches.....	52
3.3 Four-bar mechanism.....	55
3.3.1 Equations of motion	56
3.3.2 Numerical example	60
3.4 Carpet Scrapping Machine.....	63
3.4.1 Subsystem III	66
3.4.2 Subsystem I.....	69
3.4.3 Subsystem II.....	71

3.4.4 Numerical example	72
3.4.5 Computation efficiency	76
3.5 Spatial RSSR Mechanism	76
3.5.1 Subsystem approach	78
3.5.2 Numerical example	83
3.5.3 Computation efficiency	86
3.6 Summary	86
4 Equipomental Systems	87
4.1 Equipomental Systems for Planar Motion	87
4.1.1 Two point-mass model	89
4.1.2 Three point-mass model	90
4.2 Equipomental Systems for Spatial Motion	93
5 Balancing of Planar Mechanisms	99
5.1 Balancing of Shaking Force and Shaking Moment	100
5.1.1 Equipomental system in optimization	101
5.2 Balancing Problem Formulation	102
5.2.1 Equations of motion	102
5.2.2 Equations of motion for a point-mass system	106
5.2.3 Shaking force and shaking moment	110
5.2.4 Optimality criterion	112
5.2.5 Mass redistribution method	113
5.2.6 Counterweighting method	114
5.3 Hoeken's Four-bar Mechanism	118
5.3.1 Balancing of shaking force	119
5.3.2 Optimization of shaking force and shaking moment	121
5.4 Carpet Scrapping Mechanism	130
5.5 Summary	135
6 Balancing of Spatial Mechanisms	137
6.1 Balancing Problem Formulation	138
6.1.1 Dynamic equations of motion	138
6.1.2 Shaking force and shaking moment	141
6.1.3 Optimization problem	142
6.2 Spatial RSSR Mechanism	147
6.3 Summary	157
Appendix A	159
Appendix B	163
References	165
Index	173
