Part One Linear Response of Low Dimensional Quantum Systems 1

1 Introduction 3

- 1.1 Second-Quantized Representation for Electrons 3
- 1.2 Second Quantization and Fock States 6
- 1.3 The Boson Case 6
- 1.4 The Fermion Case 9
- 1.5 The Hamiltonian of Electrons 12
- 1.6 Electron–Phonon Interaction 13
- 1.7 Effective Electron–Electron Interaction 14
- 1.8 Degenerate Electron Gases 16
- 1.9 Ground-State Energy in the High Density Limit 18
- 1.10 Wigner Solid 20
- 1.11 The Chemical Potential of an Ideal Bose Gas and Bose–Einstein Condensation 22
- 1.12 Problems 24
- References 29

2 The Kubo–Greenwood Linear Response Theory 31

- 2.1 Fluctuations and Dissipation 31
- 2.2 Nyquist’s Relation 32
- 2.3 Linear Response Theory 33
 - 2.3.1 Generalized Susceptibility 33
 - 2.3.2 Kronig–Kramers Relations 35
 - 2.3.3 Dielectric Function in Three Dimensions 36
- 2.4 The Density Matrix and Quantum Statistics 36
 - 2.4.1 The von Neumann Density Matrix 36
 - 2.4.2 Entropy 37
- 2.5 Kubo’s Theory 38
- 2.6 The Kubo Equation 40
- 2.7 Fluctuation–Dissipation Theorem 41

2.8	Applications	43
2.8.1	Mobility and the Nernst–Einstein Relation	43
2.8.2	Electrical Conductivity and the Nyquist Relation	45
2.8.3	Magnetic Susceptibility	46
2.8.4	The Langevin Equation	46
2.8.5	Stochastic Model of Magnetic Resonance	47
2.8.6	Gaussian Process	48
2.9	Kinetic Equation for Elastic Processes	49
2.9.1	Boltzmann’s Transport Equation	49
2.9.2	The Collision Term	49
2.9.3	Solution in the Ohmic Regime	50
2.9.4	Conductivity and Mobility	52
2.10	Problems	52
	References	55
3	Feynman Diagrammatic Expansion	57
3.1	General Formalism	57
3.2	Functional Derivative Techniques	63
3.3	Unrenormalized Expansion for $\mathcal{G}$ and Σ	67
3.4	Renormalized Expansion for Self-Energy Σ	70
3.5	The Schrödinger Equation in the Hartree–Fock Approximation	74
3.6	Screened External Potential	75
3.7	Retarded Polarization Function	76
3.8	RPA for the Polarization Function	77
3.9	Problems	78
	References	81
4	Plasmon Excitations in Mesoscopic Structures	83
4.1	Linear Response Theory and Collective Excitations	83
4.1.1	Screening and the Self-Consistent Field Approximation	85
4.2	A Linear Array of Nanotubes	86
4.2.1	Tight-Binding Model	87
4.2.2	Numerical Results and Discussion	92
4.3	A Linear Array of Quantum Wires	93
4.4	Coupled Half-Plane Superlattices	95
4.4.1	Hydrodynamic Model	96
4.4.2	Numerical Results and Discussion	99
4.5	Problems	101
	References	111
5	The Surface Response Function, Energy Loss and Plasma Instability	113
5.1	Surface Response Function	113
5.1.1	The Image Potential	114
5.1.2	A Bi-Layer System	115
5.1.3	A Dielectric Slab	117
5.1.4	A Layered 2DEG System	118

5.2	Electron Energy Loss for a Planar Surface	119
5.2.1	Transfer-Matrix Method	120
5.2.2	Motion Parallel to the Surface	122
5.2.3	Motion Perpendicular to the Surface	122
5.2.4	The Inverse Dielectric Function Formalism	123
5.3	Plasma Instability for a Planar Surface	125
5.4	Energy Transfer in Nanotubes	132
5.4.1	Energy Loss on a Single Wall Nanotube	132
5.5	Problems	141
	References	145
6	The Rashba Spin–Orbit Interaction in 2DEG	147
6.1	Introduction to Spin–Orbit Coupling	147
6.2	Spin–Orbit Coupling in the Dirac Equation	148
6.3	Rashba Spin–Orbit Coupling for a Quantum Wire	151
6.4	SOI Effects on Conductance and Electron-Diffusion Thermoelectric Power	154
6.5	Problems	156
	References	157
7	Electrical Conductivity: the Kubo and Landauer–Büttiker Formulas	159
7.1	Quantum Mechanical Current	159
7.2	The Statistical Current	160
7.3	A Green’s Function Formalism	161
7.4	The Static Limit	163
7.5	Model and Single-Particle Eigenstates	164
7.6	Averaged Conductivity	167
7.7	Applications to One-Dimensional Density Modulated 2DEG	171
7.8	Scattering Theory Formalism	175
7.9	Quantum Hall Effect	176
7.10	Problems	177
	References	177
8	Nonlocal Conductivity for a Spin-Split Two-Dimensional Electron Liquid	179
8.1	Introduction	179
8.2	Kubo Formula for Conductivity	180
8.3	The Self-Energy and Scattering Time	182
8.4	Drude-Type Conductivity for Spin-Split Subband Model	183
8.5	Vertex Corrections to the Local Conductivity	185
8.6	Numerical Results for Scattering Times	191
8.7	Related Results in 3D in the Absence of SOI	192
	References	194
9	Integer Quantum Hall Effect	197
9.1	Basic Principles of the Integer Quantum Hall Effect	197
9.1.1	The Hall Effect	197

9.1.2	The Quantum Hall Effect	198
9.1.3	An Idealized Model	199
9.1.4	Effect of Finite Temperature	201
9.1.5	Effect of Impurities	202
9.1.6	Application of the Quantum Hall Effect	202
9.2	Fundamental Theories of the IQHE	203
9.2.1	Energy Spectrum and Wave functions	203
9.2.2	Perturbation and Scattering Theory	205
9.2.3	Gauge Symmetry Approach	206
9.2.4	The QHE in a Periodic Potential	207
9.2.5	Topological Equivalence of the Quantum Hall Conductance	208
9.3	Corrections to the Quantization of the Hall Conductance	210
9.3.1	Properties of the Green's Function	210
	References	212
10	Fractional Quantum Hall Effect	215
10.1	The Laughlin Ground State	215
10.1.1	The Lowest Landau Level	215
10.1.2	Laughlin's Wave Function	216
10.1.3	Properties of the Laughlin Wave Function	218
10.1.4	Justification of the Laughlin State	219
10.2	Elementary Excitations	220
10.2.1	Fractional Charge	220
10.2.2	The Complete Set of Quasi-Hole States	222
10.3	The Ground State: Degeneracy and Ginzburg–Landau Theory	224
10.3.1	Ground State Degeneracy	224
10.3.2	Ginzburg–Landau Theory of the Quantum Hall Effect	225
10.4	Problems	228
	References	229
11	Quantized Adiabatic Charge Transport in 2D Electron Systems and Nanotubes	231
11.1	Introduction	231
11.2	Theory for Current Quantization	232
11.3	Tunneling Probability and Current Quantization for Interacting Two-Electron System	235
11.3.1	Spin Unpolarized Case	236
11.4	Adiabatic Charge Transport in Carbon Nanotubes	238
11.5	Summary and Remarks	240
	References	241
12	Graphene	243
12.1	Introduction	243
12.2	Electronic Properties of Graphene	245
12.3	Graphene Nanoribbons and Their Spectrum	249
12.3.1	Zigzag Edge	251

12.3.2	Armchair Nanoribbon	253
12.4	Valley-Valve Effect and Perfect Transmission in GNR's	255
12.5	GNR's Electronic and Transport Properties in External Fields	262
12.6	Problems	267
12.A	Energy Eigen States	270
12.B	The Conductance	271
	References	273
13	Semiclassical Theory for Linear Transport of Electrons	275
13.1	Roughness Scattering	276
13.1.1	Model for Elastic Scattering	277
13.1.2	Numerical Results for Roughness Scattering Effect	280
13.2	Phonon Scattering	282
13.2.1	Model for Inelastic Scattering	283
13.2.2	Numerical Results for Phonon Scattering Effect	285
13.3	Thermoelectric Power	287
13.3.1	Model for Non-equilibrium Phonons	288
13.3.2	Numerical Results for Thermoelectric Power	291
13.4	Electron–Electron Scattering	293
13.4.1	Model for Pair Scattering	293
13.4.2	Numerical Results for Coulomb Scattering Effect	295
	References	298
Part Two	Nonlinear Response of Low Dimensional Quantum Systems	301
14	Theory for Nonlinear Electron Transport	303
14.1	Semiclassical Theory	303
14.1.1	Transient Boltzmann Equation	303
14.1.2	Numerical Procedure	306
14.1.3	Numerical Results for Bloch Oscillations and Dynamical Localization	309
14.2	Quantum Theory	312
14.2.1	Force Balance Equation	312
14.2.2	Boltzmann Scattering Equation	315
	References	318
15	Spontaneous and Stimulated Nonlinear Wave Mixing of Multi-excitons	319
15.1	Spontaneous, Stimulated, Coherent and Incoherent Nonlinear Wave Mixing	323
15.2	$n + 1$ Wave Mixing in QD Fluids and Polymer QDs Molecule Solutions	328
15.2.1	Stimulated and Spontaneous Incoherent Signals	329
15.2.2	Spontaneous Coherent Signal	330
15.3	Application to Two-Photon-Induced Signals	333
15.A	Semiclassical vs. Quantum Field Derivation of Heterodyne Detected Signals	337

15.B	Generalized Susceptibility and Its CTPL Representation	340
	References	342
16	Probing Excitons and Biexcitons in Coupled QDs by Coherent Optical Spectroscopy	345
16.1	Model Hamiltonian for Two Coupled Quantum Dots	346
16.2	Single-exciton Manifold and the Absorption Spectrum	348
16.3	Two-exciton Manifold and the 2D Spectra	351
16.4	Summary	357
16.A	Transformation of the Electron–Hole Hamiltonian Using Excitonic Variables	357
16.B	The Nonlinear Exciton Equations	359
16.C	The 2D Signals	360
	References	361
17	Non-thermal Distribution of Hot Electrons	363
17.1	Introduction	363
17.2	Boltzmann Scattering Equation	364
17.3	Numerical Results for Effective Electron Temperature	367
17.4	Summary	369
	References	370
	Index	373
