Preface for 2nd Edition *XIII*

Preface for 1st Edition *XVII*

Acknowledgments for 2nd Edition *XXI*

Acknowledgments for 1st Edition *XXV*

1 Introduction *1*
1.1 Exposition *1*
1.2 Historical Developments and Applications *4*
1.3 Sources of Charged Particles *7*
References *14*

2 Review of Charged Particle Dynamics *15*
2.1 The Lorentz Force and the Equation of Motion *15*
2.2 The Energy Integral and Some General Formulas *18*
2.3 The Lagrangian and Hamiltonian Formalisms *22*
2.3.1 Hamilton's Principle and Lagrange's Equations *22*
2.3.2 Generalized Potential and Lagrangian for Charged Particle Motion in an Electromagnetic Field *24*
2.3.3 Hamilton's Equations of Motion *26*
2.3.4 The Hamiltonian for Charged Particles and Some Conservation Theorems *28*
2.4 The Euler Trajectory Equations *33*
2.4.1 The Principle of Least Action and the Euler Equations *33*
2.4.2 Relativistic Euler Equations in Axially Symmetric Fields *36*
2.5 Analytic Examples of Charged Particle Motion *38*
2.5.1 Planar Diode without Space Charge *38*
2.5.2 Planar Diode with Space Charge (Child–Langmuir Law) *39*
2.5.3 Charged Particle Motion in a Uniform Magnetic Field *40*
2.5.4 Charged Particle Motion in a Radial Electric Field *41*

2.5.5 The Harmonic Oscillator 43
Reference 45
Problems 45

3 Beam Optics and Focusing Systems without Space Charge 51
3.1 Beam Emittance and Brightness 51
3.2 Liouville's Theorem 57
3.3 The Paraxial Ray Equation for Axially Symmetric Systems 61
3.3.1 Series Representation of Axisymmetric Electric and Magnetic Fields 61
3.3.2 Derivation of the Paraxial Ray Equation 63
3.3.3 General Properties of the Solutions of the Paraxial Ray Equations 69
3.4 Axially Symmetric Fields as Lenses 72
3.4.1 General Parameters and Transfer Matrix of a Lens 72
3.4.2 Image Formation and Magnification 75
3.4.3 Electrostatic Lenses 78
3.4.4 Solenoidal Magnetic Lenses 88
3.4.5 Effects of a Lens on the Trace-Space Ellipse and Beam Envelope 92
3.4.6 Aberrations in Axially Symmetric Lenses 94
3.5 Focusing by Quadrupole Lenses 98
3.6 Constant-Gradient Focusing in Circular Systems 103
3.6.1 Betatron Oscillations 103
3.6.2 The Trace-Space Ellipse and Beam Envelope in a Betatron-Type Field 107
3.6.3 Focusing in Axisymmetric $\mathbf{E} \times \mathbf{B}$ Fields 111
3.6.4 Energy Spread, Momentum Compaction, and Effective Mass 114
3.7 Sector Magnets and Edge Focusing 119
3.8 Periodic Focusing 122
3.8.1 Periodic Focusing with Thin Lenses 122
3.8.2 General Theory of Courant and Snyder 128
3.8.3 The FODO Quadrupole Channel 135
3.8.4 Sector-Focusing Cyclotrons 137
3.8.5 Strong-Focusing Synchrotrons 143
3.8.6 Resonances in Circular Accelerators 146
3.9 Adiabatic Damping of the Betatron Oscillation Amplitudes 151
References 154
Problems 154

4 Linear Beam Optics with Space Charge 163
4.1 Theoretical Models of Beams with Space Charge 163
4.2 Axisymmetric Beams in Drift Space 170
4.2.1 Laminar Beam with Uniform Density Profile 170

4.2.2 Beam Envelope with Self Fields and Finite Emittance *180*
4.2.3 Limitations of the Uniform Beam Model and Limiting Currents *181*
4.2.4 Self-Focusing of a Charge-Neutralized Beam (Bennett Pinch) *185*
4.3 Axisymmetric Beams with Applied and Self Fields *187*
4.3.1 The Paraxial Ray Equation with Self Fields *187*
4.3.2 Beam Transport in a Uniform Focusing Channel *189*
4.4 Periodic Focusing of Intense Beams (Smooth-Approximation Theory) *197*
4.4.1 Beam Transport in a Periodic Solenoid Channel *197*
4.4.2 Beam Transport in a Quadrupole (FODO) Channel *209*
4.4.3 Envelope Oscillations and Instabilities of Mismatched Beams *214*
4.4.4 Coherent Beam Oscillations due to Injection Errors and Misalignments *224*
4.5 Space-Charge Tune Shift and Current Limits in Circular Accelerators *233*
4.5.1 Betatron Tune Shift due to Self Fields *233*
4.5.2 Current Limits in Weak- and Strong-Focusing Systems *236*
4.5.3 Effects of Image Forces on Coherent and Incoherent Betatron Tune *238*
4.6 Charge Neutralization Effects *243*
4.6.1 Ionization Cross Sections for Electron and Proton Beams in Various Gases *243*
4.6.2 Linear Beam Model with Charge Neutralization *248*
4.6.3 Gas Focusing in Low-Energy Proton and H^- Beams *250*
4.6.4 Charge-Neutralization Effects in Intense Relativistic Electron Beams *254*
4.6.5 Charge-Neutralization Effects in High-Energy Synchrotrons and Storage Rings *258*
4.6.6 Plasma Lenses *262*
References *265*
Problems *266*

5 Self-Consistent Theory of Beams *273*
5.1 Introduction *273*
5.2 Laminar Beams in Uniform Magnetic Fields *275*
5.2.1 A Cylindrical Beam in an Infinitely Strong Magnetic Field *275*
5.2.2 Nonrelativistic Laminar Beam Equilibria *279*
5.2.3 Relativistic Laminar Beam Equilibria *290*
5.2.4 Paraxial Analysis of Mismatched Laminar Beams in Uniform Magnetic Fields *297*
5.3 The Vlasov Model of Beams with Momentum Spread *300*
5.3.1 The Vlasov Equation *300*
5.3.2 The Kapchinsky–Vladimirsky (K–V) Distribution *306*
5.3.3 Stationary Distributions in a Uniform Focusing Channel *311*

5.3.4 RMS Emittance and the Concept of Equivalent Beams *320*
5.4 The Maxwell–Boltzmann Distribution *326*
5.4.1 Coulomb Collisions between Particles and Debye Shielding *326*
5.4.2 The Fokker–Planck Equation *329*
5.4.3 The Maxwell–Boltzmann Distribution for a Relativistic Beam *333*
5.4.4 The Stationary Transverse Distribution in a Uniform or Smooth Focusing Channel *339*
5.4.5 Transverse Temperature and Beam-Size Variations in Nonuniform Focusing Channels *349*
5.4.6 The Longitudinal Distribution and Beam Cooling due to Acceleration *352*
5.4.7 Stationary Line-Charge Density Profiles in Bunched Beams *359*
5.4.8 Longitudinal Motion in rf Fields and the Parabolic Bunch Model *371*
5.4.9 Longitudinal Beam Dynamics in Circular Machines *382*
5.4.10 Effects of Momentum Spread on the Transverse Distribution *389*
5.4.11 Coupled Envelope Equations for a Bunched Beam *399*
5.4.12 Matching, Focusing, and Imaging *404*
References *412*
Problems *413*

6 Emittance Growth *419*
6.1 Causes of Emittance Change *419*
6.2 Free Energy and Emittance Growth in Nonstationary Beams *422*
6.2.1 Analytical Theory *422*
6.2.2 Comparison of Theory, Simulation, and Experiment *430*
6.3 Instabilities *442*
6.3.1 Transverse Beam Modes and Instabilities in Periodic Focusing Channels *442*
6.3.2 Longitudinal Space-Charge Waves and Resistive-Wall Instability *448*
6.3.3 Longitudinal Instability in Circular Machines and Landau Damping *463*
6.4 Collisions *472*
6.4.1 The Boersch Effect *472*
6.4.2 Intrabeam Scattering in Circular Machines *476*
6.4.3 Multiple Scattering in a Background Gas *483*
6.5 Beam Cooling Methods in Storage Rings *486*
6.5.1 The Need for Emittance Reduction *486*
6.5.2 Electron Cooling *487*
6.5.3 Stochastic Cooling *489*
6.5.4 Radiation Cooling *491*
6.6 Concluding Remarks *497*
References *501*
Problems *504*

7 **Beam Physics Research from 1993 to 2007** *507*
7.1 Introduction *507*
7.2 Longitudinal Beam Physics Research *507*
7.2.1 Studies in the Long Periodic Solenoid Channel *507*
7.2.2 Resistive-Wall Instability Studies in a Long Solenoid Experiment *508*
7.2.3 Studies of Energy Spread due to Coulomb Collisions *510*
7.3 Transverse Beam Physics *516*
7.3.1 Major Milestones before 1993 *516*
7.3.2 Overview of Milestones Since 1993 *518*
7.3.2.1 Definitions *518*
7.3.2.2 The Parameter Range and Characterization of Charged Particle Beams *520*
7.3.3 Theoretical Research on Beam Mismatch and Halo Formation *522*
7.3.4 Resonances and Instabilities *526*
7.3.5 Equipartitioning and Stability of Anisotropic Beams *528*
7.3.6 Related Experiments (with contributions by Santiago Bernal and Rami Kishek) *535*
7.3.6.1 The Bernal Experiments *535*
7.3.6.2 The Los Alamos Low-Energy Demonstration Accelerator (LEDA) *537*
7.3.6.3 The Paul Trap Simulator Experiment (PTSX) at the Princeton Plasma Physics Laboratory *540*
7.4 The University of Maryland Electron Ring *544*
7.4.1 History and Developments of the Ring Concept *544*
7.4.2 Scaling Laws for Charged Particle Beams (with contributions by Santiago Bernal) *548*
7.4.3 Construction and Initial Operation of UMER *553*
7.4.4 Other Ring Experiments and Theory *562*
7.4.4.1 The LLNL Heavy Ion Recirculator *562*
7.4.4.2 The Small Isochronous Ring (SIR) Project at Michigan State University (MSU) *564*
7.4.4.3 The Proton Storage Rings (PSR) of the Institute for Nuclear Physics (INP) at Novosibirsk *565*
7.4.4.4 The Intersecting Storage Rings (ISR) at CERN *571*
7.5 Issues Related to Electron Photoinjectors *577*
7.5.1 The Problem *577*
7.5.2 Background *578*
7.5.3 Space-Charge Limited Current and Instabilities in Photoinjectors *579*
7.5.4 UMER and Related Experiments on Longitudinal Perturbations *581*
7.6 Concluding Remarks *583*
References *586*
Problems *594*

Appendix 1. Example of a Pierce-Type Electron Gun with Shielded Cathode *599*
References *601*
Appendix 2. Example of a Magnetron Injection Gun *603*
References *605*
Appendix 3. Four-Vectors and Covariant Lorentz Transformations *607*
References *617*
Appendix 4. Equipartitioning in High-Current rf Linacs *611*
References *625*
Appendix 5. Radial Defocusing and Emittance Growth in High-Gradient rf Structures (Example: The rf Photocathode Electron Gun) *619*
