

Hugo Hens

Building Physics – Heat, Air and Moisture

Fundamentals and Engineering Methods
with Examples and Exercises

Contents

	Preface	VII
0	Introduction	1
0.1	Subject of the Book	1
0.2	Building Physics	1
0.2.1	Definition	1
0.2.2	Criteria	2
0.2.2.1	Comfort	2
0.2.2.2	Health	2
0.2.2.3	Architectural and Material Facts	3
0.2.2.4	Economy	3
0.2.2.5	Environment	3
0.3	Importance of Building Physics	3
0.4	History of Building Physics	4
0.5	References	6
0.6	Units and Symbols	6
1	Heat Transfer	11
1.1	Overview	11
1.2	Conduction	13
1.2.1	Conservation of Energy	13
1.2.2	Fourier's Laws	14
1.2.2.1	First Law	14
1.2.2.2	Second Law	15
1.2.3	Steady State	16
1.2.3.1	What Is It?	16
1.2.3.2	One Dimension: Flat Walls	16
1.2.3.3	Two Dimensions: Cylinder Symmetry	24
1.2.3.4	Two and Three Dimensions: Thermal Bridges	25
1.2.4	Transient Regime	30
1.2.4.1	What is Transient?	30
1.2.4.2	Flat Walls, Periodic Boundary Conditions	31
1.2.4.3	Flat Walls, Transient Boundary Conditions	43
1.2.4.4	Two and Three Dimensions	47
1.3	Convection	48
1.3.1	Overview	48
1.3.1.1	Heat Transfer at a Surface	48
1.3.1.2	Convection	49

1.3.2	Convection Typology	50
1.3.2.1	Driving Forces	51
1.3.2.2	Type of flow	51
1.3.3	Calculating the Convective Surface Film Coefficient	51
1.3.3.1	Analytically.....	51
1.3.3.2	Numerically	52
1.3.3.3	Dimensional Analysis.....	52
1.3.4	Values for the Convective Surface Film Coefficient	54
1.3.4.1	Walls.....	54
1.3.4.2	Cavities	56
1.3.4.3	Pipes	58
1.4	Radiation.....	59
1.4.1	Overview.....	59
1.4.1.1	Thermal Radiation	59
1.4.1.2	Quantities	59
1.4.1.3	Reflection, Absorption and Transmission.....	59
1.4.1.4	Radiant Surfaces.....	62
1.4.2	Black Bodies.....	62
1.4.2.1	Characteristics.....	62
1.4.2.2	Radiation Exchange Between Two Black Bodies: The Angle Factor	65
1.4.2.3	Properties of Angle Factors	66
1.4.2.4	Calculating Angle Factors	67
1.4.3	Grey Bodies	69
1.4.3.1	Characteristics.....	69
1.4.3.2	Radiation Exchange Between Grey Bodies	70
1.4.4	Colored Bodies	72
1.4.5	Practical Formulae	72
1.5	Applications	74
1.5.1	Surface Film Coefficients and Reference Temperatures	74
1.5.1.1	Overview.....	74
1.5.1.2	Inside Environment.....	74
1.5.1.3	Outside Environment	78
1.5.2	Steady-state, One-dimension: Flat Walls	81
1.5.2.1	Thermal Transmittance and Interface Temperatures	81
1.5.2.2	Thermal Resistance of a Non-ventilated Infinite Cavity	85
1.5.2.3	Solar Transmittance	86
1.5.3	Steady State, Cylindrical Coordinates: Pipes	89
1.5.4	Steady-state, Two and Three Dimensions: Thermal Bridges.....	90
1.5.4.1	Calculation by the Control Volume Method (CVM)	90
1.5.4.2	Thermal Bridges in Practice	91
1.5.5	Transient, Periodic: Flat Walls	94
1.5.6	Heat Balances	95
1.6	Problems	96
1.7	References	109

2	Mass Transfer	111
2.1	In General	111
2.1.1	Quantities and Definitions	111
2.1.2	Saturation Degree Scale	113
2.1.3	Air and Moisture Transfer	115
2.1.4	Moisture Sources	117
2.1.5	Air, Moisture and Durability	117
2.1.6	Linkages between Mass- and Energy Transfer.	119
2.1.7	Conservation of Mass	119
2.2	Air Transfer	120
2.2.1	In General	120
2.2.2	Air Pressure Differences	121
2.2.2.1	Wind	121
2.2.2.2	Stack Effects	122
2.2.2.3	Fans	123
2.2.3	Air Permeances	124
2.2.4	Air Transfer in Open-porous Materials	127
2.2.4.1	Conservation of Mass	127
2.2.4.2	Flow Equation	128
2.2.4.3	Air Pressures	128
2.2.4.4	One Dimension: Flat Walls	129
2.2.4.5	Two- and Three-dimensions	131
2.2.5	Air Flow Through Permeable Layers, Apertures, Joints, Leaks and Cavities	132
2.2.5.1	Flow Equations	132
2.2.5.2	Conservation of Mass, Equivalent Hydraulic Circuit	132
2.2.6	Combined Heat- and Air Transfer	133
2.2.6.1	Open-porous Materials	133
2.2.6.2	Air Permeable Layers, Joints, Leaks and Cavities	140
2.3	Vapour Transfer	143
2.3.1	Water Vapour in the Air	143
2.3.1.1	Overview	143
2.3.1.2	Quantities	143
2.3.1.3	Maximum Vapour Pressure and Relative Humidity	144
2.3.1.4	Changes of State in Humid Air	148
2.3.1.5	Enthalpy of Moist Air	149
2.3.1.6	Characterizing Moist Air	149
2.3.1.7	Applications	150
2.3.2	Water Vapour in Open-porous Materials	156
2.3.2.1	Overview	156
2.3.2.2	Sorption Isotherm and Specific Moisture Ratio	156
2.3.2.3	The Physics Behind	158
2.3.2.4	Impact of Salts	160
2.3.2.5	Consequences	161
2.3.3	Vapour Transfer in the Air	161
2.3.4	Vapour Transfer in Materials and Construction Parts	164
2.3.4.1	Flow Equation	164
2.3.4.2	Conservation of Mass	166

2.3.4.3	Vapour Transfer by 'Equivalent' Diffusion	167
2.3.4.4	Vapour Transfer by (Equivalent) Diffusion and Convection	183
2.3.5	Surface Film Coefficients for Diffusion	190
2.3.6	Some Applications	193
2.3.6.1	Diffusion Resistance of a Cavity	193
2.3.6.2	Cavity Ventilation.	194
2.3.6.3	Water Vapour Balance in a Room in Case of Surface Condensation and Drying	196
2.4	Moisture Transfer	197
2.4.1	Overview.	197
2.4.2	Moisture Transfer in a Pore	197
2.4.2.1	Capillarity	197
2.4.2.2	Water Transfer	200
2.4.2.3	Vapour Transfer	209
2.4.2.4	Moisture Transfer	211
2.4.3	Moisture Transfer in Materials and Construction Parts	211
2.4.3.1	Transfer Equations	211
2.4.3.2	Conservation of Mass	214
2.4.3.3	Starting, Boundary and Contact Conditions	215
2.4.3.4	Remark	216
2.4.4	Simplified Moisture Transfer Model	216
2.4.4.1	Assumptions	216
2.4.4.2	Applications	218
2.5	Problems	233
2.6	References.	251
3	Combined Heat, Air and Moisture Transfer	255
3.1	Overview.	255
3.2	Assumptions	255
3.3	Solution.	255
3.4	Conservation Laws	256
3.4.1	Conservation of Mass	256
3.4.2	Conservation of Energy	258
3.5	Flow Equations	260
3.5.1	Heat.	260
3.5.2	Mass, Air.	260
3.5.2.1	Open Porous Materials	260
3.5.2.2	Air Permeable Layers, Apertures, Joints, Cracks, Leaks and Cavities.	261
3.5.3	Mass, Moisture	261
3.5.3.1	Water Vapour	261
3.5.3.2	Water.	261
3.6	Equations of State	262
3.6.1	Enthalpy/Temperature and Water Vapour Saturation Pressure/Temperature . .	262
3.6.2	Relative Humidity/Moisture Content	262
3.6.3	Suction/Moisture Content.	262

3.7	Starting, Boundary and Contact Conditions	262
3.7.1	Starting Conditions	262
3.7.2	Boundary Conditions	262
3.7.3	Contact Conditions	263
3.8	Two Examples of Simplified Models	263
3.8.1	Heat, Air and Moisture Transfer in Non-Hygroscopic, Non-Capillary Materials	263
3.8.2	Heat, Air and Moisture Transfer in Hygroscopic Materials at Low Moisture Content	265
3.9	References	266
4	Postscript	269
