

Contents

Prologue — V

Glossary of acronyms — XIII

1 Fundamental principles — 1

- 1.1 Energy, colour, absorption and emission — **1**
- 1.2 Absorption and emission spectra — **7**
- 1.2.1 Spectra of liquids and gases — **7**
- 1.3 Emission lifetimes and imaging — **10**
- 1.4 Stimulated emission and lasers — **11**
- 1.5 Single molecule fluorescence and super-resolution imaging — **13**
- 1.6 The laws of photochemistry, quantum yield and action spectra — **15**
- 1.7 Ground states, excited states and electron configurations — **17**
- 1.8 Practical photochemistry, how to stimulate and monitor a photochemical reaction — **22**
- Questions — **28**
- References — **29**

2 Fundamental principles II — 30

- 2.1 Primary photophysical processes — **30**
- 2.1.1 Singlets and triplets — **30**
- 2.1.2 Intensities and rates of photophysical processes — **35**
- 2.1.3 Qualitative estimates of the transition moment — **36**
- 2.1.4 Experimental determination of oscillator strength — **42**
- 2.2 Primary photochemical processes and quenching of excited states — **43**
- 2.2.1 Prompt photochemical processes and equilibrated excited states — **43**
- 2.2.2 Quenching processes and their kinetics — **45**
- 2.2.3 Energy transfer mechanisms — **48**
- 2.2.4 Triplet-triplet annihilation and singlet fission — **51**
- 2.2.5 Thermally activated delayed fluorescence — **53**
- 2.2.6 Excited state electron transfer mechanisms — **54**
- 2.2.7 Proton-coupled electron transfer (PCET) — **56**
- 2.2.8 Excited state proton transfer, photo-acids and hydrogen atom transfer (HAT) — **57**
- 2.2.9 Photosensitisation — **58**
- 2.2.10 Photon upconversion — **59**
- 2.3 Classification of electronic transitions — **62**
- 2.3.1 Organic molecules — **62**
- 2.3.2 Transition metal complexes — **68**

- 2.3.3 Lanthanide complexes — **83**
 - Questions — **86**
 - References — **88**

3 Solids — 90

- 3.1 Spectra of solids — **90**
 - 3.1.1 Absorption spectra and quantum size effect — **90**
 - 3.1.2 Diffuse reflectance spectroscopy — **92**
 - 3.1.3 Measurement of bandgap — **93**
 - 3.1.4 Emission spectra of solids — **94**
 - 3.1.5 The photonic bandgap — **96**
 - 3.1.6 Photoacoustic spectroscopy — **97**
- 3.2 Solar cells, light emitting diodes and diode lasers — **99**
- 3.3 Charge separation at the semiconductor-liquid interface — **103**
 - 3.3.1 Interfacial electron transfer at a semiconductor electrode — **105**
 - 3.3.2 Charge separation at nanoparticles — **107**
 - 3.3.3 Interfacial electron transfer — **108**
- 3.4 Comparing photocatalytic activities — **109**
- 3.5 Pristine and surface modified semiconductor powders — **112**
 - 3.5.1 Pristine semiconductor powders — **112**
 - 3.5.2 Phase change and crystal modifications — **114**
 - 3.5.3 Solid solutions — **114**
 - 3.5.4 Surface modified semiconductor powders — **116**
- Questions — **121**
- References — **122**

4 Photochemistry — 125

- 4.1 Light reactions and dark reactions — **125**
- 4.2 Non-catalytic photochemistry of organic molecules — **128**
 - 4.2.1 Addition and substitution reactions — **128**
 - 4.2.2 Cycloaddition reactions — **130**
 - 4.2.3 Isomerisation and rearrangement reactions — **134**
 - 4.2.4 Fragmentation reactions — **139**
 - 4.2.5 Reactions with O₂ — **141**
 - 4.2.6 Commercially relevant photoreactions — **145**
- 4.3 Non-catalytic photochemistry of transition metal complexes — **156**
 - 4.3.1 Photo-induced bond cleavage — **156**
 - 4.3.2 Photo-induced isomerisation — **162**
 - 4.3.3 Photo-induced electron transfer (PET) — **165**
- 4.4 Atmospheric photochemistry — **167**
 - 4.4.1 The components of the atmosphere — **167**
 - 4.4.2 Oxygen and ozone (O₂ and O₃) in the stratosphere — **168**

- 4.4.3 Ozone in the troposphere — **170**
- 4.5 Natural waters photochemistry — **173**
- 4.5.1 Iron(III) complexes — **174**
- 4.5.2 $\text{OH}^\cdot$, $\text{NO}^\cdot$, NO_2 , $\text{CO}_3^{\cdot-}$ radicals and singlet oxygen — **175**
- 4.5.3 Dihalogen radicals $\text{Cl}_2^{\cdot-}$ and $\text{Br}_2^{\cdot-}$ — **176**
- 4.5.4 Environmental aspects — **177**
- Questions — **178**
- References — **179**

5 Photocatalysis — 182

- 5.1 Homogeneous photocatalysis — **182**
- 5.1.1 Catalysis initiated by photodissociation of a metal-to-ligand bond — **183**
- 5.1.2 Ligand substitution by photo-induced chain reaction — **186**
- 5.1.3 Single electron transfer (SET) photocatalysis — **187**
- 5.1.4 Hydrogen atom transfer (HAT) photocatalysis — **190**
- 5.1.5 Asymmetric photocatalysis by photoredox and organocatalysis — **191**
- 5.1.6 Photocatalysed reduction and oxidation of water — **194**
- 5.1.7 Photocatalysed reduction of CO_2 — **199**
- 5.2 Energy transfer photosensitisation — **202**
- 5.3 Heterogeneous photocatalysis at semiconductor surfaces — **202**
- 5.3.1 General classification of reactions — **203**
- 5.3.2 Type A reactions — **207**
- 5.3.3 Type B reactions — **223**
- 5.3.4 Environmental aspects — **226**
- 5.3.5 Summary of semiconductor photocatalysis — **230**
- Questions — **230**
- References — **231**

6 Photobiology — 237

- 6.1 Photosynthesis — **237**
- 6.2 Photodynamic therapy (PDT) — **242**
- 6.3 Isomerisation: From vision to clocks and optogenetics — **245**
- 6.3.1 Vision — **246**
- 6.3.2 Internal clock — **248**
- 6.3.3 Optogenetics and light-dependent ion channels — **248**
- 6.3.4 Germination and growth of plants — **249**
- 6.4 Vitamin D – biosynthesis — **250**
- 6.5 Communication – bioluminescence and fluorescence — **251**
- 6.5.1 Bioluminescence in animals and bacteria — **252**
- 6.5.2 Bioluminescence in fungi and plants — **258**
- 6.5.3 Overview of biological chemiluminescence — **260**
- 6.5.4 Fluorescent proteins — **260**

6.5.5	Fluorescence labels —	264
6.6	Photoacoustics —	266
6.7	Electron transfer through proteins by long-range tunnelling —	266
6.8	Optical magnetoreception and DNA repair —	268
6.9	Photocatalysis and prebiotic evolution —	271
6.10	Overview —	272
	Questions —	272
	References —	273
7	Religion, philosophy and art —	276
7.1	Religion and philosophy —	276
7.2	Art —	282
	Epilogue —	287
	References —	288
