

Table of Contents

Introduction	1
------------------------	---

Chapter 1

Null lines on Lorentz surfaces

§1.1. Scalar products and causal character	4
§1.2. Metrics and null direction fields	8
§1.3. Lorentz surfaces and proper null coordinates	12
§1.4. A first look at null lines	15
§1.5. The Euclidean plane E^2 and the Minkowski plane $E^{2,1}$	17

Chapter 2

Box surfaces, yardsticks and global properties of Lorentzian metrics

§2.1. The one-one correspondence between box surfaces and Lorentz surfaces	19
§2.2. Yardsticks and time-orientability	22
§2.3. Intrinsic curvature and a first look at the example in our logo	25
§2.4. Geodesics and pregeodesics	27
§2.5. Completeness, inextendibility, and causality conditions	30

Chapter 3

Conformal equivalence and the Poincaré index

§3.1. Definitions of conformal equivalence	36
§3.2. C^j conformally equivalent Lorentz surfaces need not be C^{j+1} conformally equivalent	39
§3.3. The Poincaré index	47
§3.4. The Poincaré Index Theorem	50

Chapter 4

Kulkarni’s conformal boundary

§4.1. Ideal endpoints 54

§4.2. The points on the conformal boundary 61

§4.3. The topology on the conformal boundary 68

§4.4. Some properties of the conformal boundary 73

Chapter 5

Using the conformal boundary

§5.1. The foliations $\mathcal{X}$ and $\mathcal{Y}$ 84

§5.2. Spans on $\mathcal{L}$ 87

§5.3. A special $\mathcal{H}^+$ chart on the span of a null curve 95

§5.4. Characterization of C^0 smoothability of the conformal boundary . 103

§5.5. Kulkarni’s use of the conformal boundary 110

Chapter 6

Conformal invariants on Lorentz surfaces

§6.1. Conformal indices on an arbitrary Lorentz surface 119

§6.2. Conformal indices associated with $\partial\mathcal{L}$ and more properties of $\partial\mathcal{L}$. 124

§6.3. Some notions of symmetry 131

§6.4. Smyth’s digraph, determining sets and some other
conformal invariants 134

Chapter 7

Classical surface theory and harmonically immersed surfaces

§7.1. A quick review of local surface theory in Euclidean 3-space 139

§7.2. A quick review of local surface theory in Minkowski 3-space . . . 149

§7.3. Contrasting the behavior of surfaces in E^3 and $E^{3,1}$ 162

§7.4. The Hilbert–Holmgren theorem for harmonically immersed surfaces 166

*Chapter 8***Conformal realization of Lorentz surfaces in Minkowski 3-space**

§8.1. Entire timelike minimal surfaces in $E^{3,1}$	175
§8.2. Associate families of minimal surfaces	182
§8.3. Some conformal realizations of Lorentz surfaces in $E^{3,1}$	188
§8.4. Some last remarks on conformal imbeddings and immersions	196
Bibliography	201
Index	205
