

Contents

1	Basic principles of tomography — 1
1.1	Tomography — 1
1.2	Projection — 3
1.3	Image reconstruction — 5
1.4	Backprojection — 7
1.5	Mathematical expressions — 9
1.5.1	Projection — 9
1.5.2	Backprojection — 9
1.5.3	The Dirac δ -function — 11
1.6	Worked examples — 13
1.7	Summary — 16
	Problems — 17
	Bibliography — 18
2	Parallel-beam image reconstruction — 19
2.1	Fourier transform — 19
2.2	Central slice theorem — 19
2.3	Reconstruction algorithms — 22
2.3.1	Method 1 — 22
2.3.2	Method 2 — 23
2.3.3	Method 3 — 24
2.3.4	Method 4 — 25
2.3.5	Method 5 — 25
2.3.6	Method 6 — 25
2.4	A computer simulation — 27
2.5	ROI reconstruction with truncated projections — 28
2.6	Mathematical expressions — 32
2.6.1	The Fourier transform and convolution — 33
2.6.2	The Hilbert transform and the finite Hilbert transform — 33
2.6.3	Proof of the central slice theorem — 36
2.6.4	Derivation of the FBP algorithm — 37
2.6.5	Expression of the convolution backprojection algorithm — 38
2.6.6	Expression of the Radon inversion formula — 38
2.6.7	Derivation of the backprojection-then-filtering algorithm — 38
2.6.8	Expression of the derivative-backprojection-Hilbert transform algorithm — 39
2.6.9	Derivation of the backprojection-derivative-Hilbert transform algorithm — 40

2.7	Worked examples —	40
2.8	Summary —	47
	Problems —	48
	Bibliography —	48
3	Fan-beam image reconstruction —	50
3.1	Fan-beam geometry and the point spread function —	50
3.2	Parallel-beam to fan-beam algorithm conversion —	53
3.3	Short scan —	55
3.4	Mathematical expressions —	57
3.4.1	Derivation of a filtered backprojection fan-beam algorithm —	58
3.4.2	A fan-beam algorithm using the derivative and the Hilbert transform —	59
3.4.3	Expression for the Parker weights —	61
3.4.4	Errors caused by finite bandwidth implementation —	62
3.5	Worked examples —	63
3.6	Summary —	66
	Problems —	67
	Bibliography —	67
4	Transmission and emission tomography —	69
4.1	X-ray computed tomography —	69
4.2	Positron emission tomography and single-photon emission computed tomography —	73
4.3	Noise propagation in reconstruction —	76
4.3.1	Noise variance of emission data —	76
4.3.2	Noise variance of transmission data —	76
4.3.3	Noise propagation in an FBP algorithm —	77
4.4	Attenuation correction for emission tomography —	77
4.4.1	PET —	78
4.4.2	SPECT: Tretiak–Metz FBP algorithm for uniform attenuation —	79
4.4.3	SPECT: Inouye’s algorithm for uniform attenuation —	81
4.5	Mathematical expressions —	82
4.5.1	Expression for Tretiak–Metz FBP algorithm —	82
4.5.2	Derivation for Inouye’s algorithm —	83
4.5.3	Rullgård’s derivative-then-backprojection algorithm for uniform attenuation —	85
4.5.4	Novikov–Natterer FBP algorithm for nonuniform attenuation SPECT —	86
4.6	Worked examples —	86

4.7	Summary — 88
	Problems — 89
	Bibliography — 89
5	Three-dimensional image reconstruction — 91
5.1	Parallel line-integral data — 91
5.1.1	Backprojection-then-filtering — 93
5.1.2	Filtered backprojection — 95
5.2	Parallel plane-integral data — 95
5.3	Cone-beam data — 97
5.3.1	Feldkamp's algorithm — 98
5.3.2	Grangeat's algorithm — 99
5.3.3	Katsevich's algorithm — 101
5.4	Mathematical expressions — 104
5.4.1	Backprojection-then-filtering for parallel line-integral data — 105
5.4.2	FBP algorithm for parallel line-integral data — 105
5.4.3	Three-dimensional Radon inversion formula (FBP algorithm) — 107
5.4.4	Three-dimensional backprojection-then-filtering algorithm for Radon data — 107
5.4.5	Feldkamp's algorithm — 108
5.4.6	Tuy's relationship — 109
5.4.7	Grangeat's relationship — 111
5.4.8	Katsevich's algorithm — 114
5.5	Worked examples — 119
5.6	Summary — 122
	Problems — 123
	Bibliography — 124
6	Iterative reconstruction — 127
6.1	Solving a system of linear equations — 127
6.2	Algebraic reconstruction technique — 132
6.3	Gradient descent algorithms — 133
6.3.1	The gradient descent algorithm — 133
6.3.2	The Landweber algorithm — 135
6.3.3	The conjugate gradient algorithm — 135
6.4	ML-EM algorithms — 137
6.5	OS-EM algorithm — 138
6.6	Noise handling — 138
6.6.1	Analytical methods – windowing — 139
6.6.2	Iterative methods – stopping early — 139
6.6.3	Iterative methods – choosing pixels — 140

6.6.4	Iterative methods – accurate modeling —	142
6.7	Noise modeling as a likelihood function —	143
6.8	Including prior knowledge (Bayesian) —	145
6.9	Mathematical expressions —	147
6.9.1	ART —	147
6.9.2	The Landweber algorithm —	148
6.9.3	CG algorithm —	149
6.9.4	ML-EM —	150
6.9.5	OS-EM —	153
6.9.6	MAP (Green's one-step late algorithm) —	154
6.9.7	Matched and unmatched projector/backprojector pairs —	154
6.10	Reconstruction using highly undersampled data —	156
6.11	Worked examples —	159
6.12	Summary —	171
	Problems —	172
	Bibliography —	174
7	MRI reconstruction —	178
7.1	The “M” —	178
7.2	The “R” —	180
7.3	The “I” —	183
7.3.1	To obtain z-information: slice selection —	183
7.3.2	To obtain x-information: frequency encoding —	185
7.3.3	To obtain y-information: phase encoding —	185
7.4	Mathematical expressions —	188
7.5	Image reconstruction for MRI —	191
7.5.1	Fourier reconstruction —	191
7.5.2	Iterative reconstruction —	192
7.6	Worked examples —	192
7.7	Summary —	194
	Problems —	195
	Bibliography —	195
8	Using FBP to perform iterative reconstruction —	196
8.1	The Landweber algorithm: From recursive form to non-recursive form —	196
8.2	The Landweber algorithm: From non-recursive form to closed form —	197
8.3	The Landweber algorithm: From closed form to backprojection-then-filtering algorithm —	198
8.3.1	Implementation of $(A^T A)^{-1}$ in the Fourier domain —	198

8.3.2	Implementation of $I - (I - \alpha A^T A)^k$ in the Fourier domain —	198
8.3.3	Landweber algorithm: Backprojection-then-filtering algorithm —	199
8.3.4	Numerical examples of the window function —	199
8.4	The Landweber algorithm: The weighted FBP algorithm —	201
8.4.1	Landweber algorithm: FBP without noise weighting —	201
8.4.2	Landweber algorithm: FBP with view-based noise weighting —	202
8.4.3	Landweber algorithm: FBP with ray-based noise weighting —	203
8.5	FBP algorithm with quadratic constraints —	205
8.5.1	Example of minimum norm-constrained FBP —	206
8.5.2	Example of reference image-constrained FBP —	207
8.6	Convolution backprojection —	208
8.7	Non-quadratic constraints —	212
8.8	A viewpoint from calculus of variations —	214
8.9	Summary —	217
	Problems —	218
	Bibliography —	218
