Preface — vii

Acknowledgement — ix

1 Introduction — 1

2 Molecular structure and electronic structure — 5

2.1 X-ray absorption spectroscopy — 5

2.1.1 Hard X-rays: XAS and XANES — 5

2.1.2 Soft X-ray spectroscopy: NEXAFS — 22

2.2 X-ray emission spectroscopy — 25

2.2.1 Hard X-ray emission — 25

2.2.2 Energy-Dispersive X-ray Spectroscopy (EDS, EDX, or XEDS) — 29

2.2.3 Soft X-ray emission spectroscopy — 31

2.3 X-ray photoelectron spectroscopy — 38

2.3.1 Core level spectroscopy — 38

2.3.2 Valence band spectroscopy — 56

3 Crystal structure and microstructure — 67

3.1 X-ray diffraction — 67

3.2 X-ray wide-angle scattering — 73

3.3 Small-angle X-ray scattering (SAXS) — 76

3.3.1 SAXS on GC supercapacitor electrodes — 77

3.3.2 Excursion to ultra small-angle neutron scattering (USANS) — 86

3.3.3 USAXS on aerogel catalysts — 90

3.4 Extended X-ray absorption fine structure (EXAFS) spectroscopy — 95

3.5 X-ray reflectometry — 99

3.5.1 XRR on photoelectrode materials — 100

3.5.2 *In situ* and *operando* X-ray and neutron reflectometry on electrochemical systems — 104

3.5.3 Neutron reflectometry on electrochemical systems — 106

4 Real space imaging and tomography — 110

4.1 X-ray imaging and X-ray microscopy — 111

4.1.1 Polymer electrolyte membrane fuel cells — 111

4.1.2 Batteries — 112

4.2 Neutron imaging and radiography — 114

4.2.1 Solid oxide fuel cells — 114

4.3 Complementarity of X-ray and neutron methods — 116

4.4	Tomography — 119
4.4.1	Neutron tomography on SOFC — 119
4.4.2	X-ray tomography on SOFC — 121
4.4.3	Tomography on PEM-FC — 122
4.4.4	Tomography on batteries — 125
4.5	Scanning transmission X-ray microspectroscopy (STXM) — 129
4.5.1	STXM on PEM fuel cells — 131
4.5.2	STXM on lithium ion batteries — 136
4.5.3	STXM on biological samples — 139
4.5.4	STXM on soot from combustion processes — 140
4.5.5	STXM on Liesegang rings — 144
5	Resonant methods and chemical contrast variation — 149
5.1	X-ray tube (Kathodenstrahlen) — 149
5.2	Synchrotron storage rings — 152
5.3	Anomalous X-ray diffraction — 153
5.3.1	Distinguishing W and Cu in CuWO_4 photoanodes — 154
5.3.2	Separation of manganite spinel diffractogram from other battery components — 161
5.3.3	Diffraction on substituted protonated ceramic proton conductors — 163
5.4	Anomalous small-angle X-ray scattering — 167
5.4.1	<i>In situ</i> ASAXS on lithium batteries — 167
5.4.2	<i>In situ</i> ASAXS on Pt-based PEM-FC assemblies — 173
5.4.3	ASAXS on SOFC assemblies — 176
5.5	Resonant photoemission spectroscopy — 185
5.5.1	SOFC cathodes — 185
5.5.2	Mn 2p resonant photoelectron spectroscopy for SOFC chromium poisoning — 189
5.5.3	VB PES on photoelectrodes — 192
5.5.4	Lithium ion battery cathodes — 208
5.5.5	Resonant inelastic X-ray scattering — 218
6	Surface-sensitive and volume-sensitive methods — 221
6.1	X-ray Raman spectroscopy — 228
6.2	Hard X-ray XPS and hard X-ray PES (HAX-PES) — 232
6.3	X-ray standing waves for electrochemical double layer studies — 238
6.3.1	Resonant photoemission spectroscopy on thin thermochromic window VO_2 films — 239
7	Organic and bio-organic samples — 244
7.1	X-ray studies on polymer electrolyte membranes — 246

7.2	Organic solar cells —	248
7.2.1	Organic dyes for photosensitization —	250
7.3	Proteins, enzymes, bio-catalysts, living cells, and biofilms —	253
7.3.1	Protein crystallography —	253
7.3.2	Reflectometry on proteins and cells —	255
7.3.3	Protein spectroscopy —	260
7.3.4	Bioelectrodes, biofilms, and bioelectricity —	262
7.3.5	Photoelectrochemical studies on cyanobacteria during γ -irradiation —	266
8	Complex case studies/electrochemical <i>in situ</i> studies —	277
8.1	Lithium ion batteries —	280
8.1.1	Battery cell assembly and <i>ex situ</i> studies on materials and components —	280
8.1.2	Manufacturing and assembly of <i>in situ</i> battery cells at the synchrotron —	288
8.1.3	<i>Operando</i> XANES, anomalous XRD, EXAFS, and ASAXS on a lithium ion battery —	294
8.1.4	<i>Operando</i> X-ray Raman study on a lithium ion battery —	298
8.2	Ceramic fuel cells —	306
8.2.1	Ceramic proton conducting electrolyte membranes —	307
8.2.2	SOFC anode poisoning and sulfur molecular structure —	315
8.3	Photoelectrochemical cells (for solar hydrogen) —	323
8.3.1	<i>Operando</i> NEXAFS spectroscopy during water splitting —	323
8.3.2	<i>Operando</i> photoelectron spectroscopy during water splitting —	333
8.4	Bioelectrochemical systems —	339
8.4.1	Fe 3p resonant VB XPS on phycocyanin adsorbed on iron oxide —	340
8.4.2	<i>Operando</i> NAP-XPS spectroscopy on an illuminated algal biofilm —	346
8.5	Electrochemical double layer capacitors —	349
8.5.1	X-ray diffraction and wide angle scattering on glassy carbon —	350
8.5.2	Small-angle scattering on supercapacitor electrodes with X-rays and with neutrons —	351
8.5.3	NEXAFS spectroscopy on thermally oxidized glassy carbon plates —	353
9	Correlation of electronic structure and conductivity —	355
9.1	Hole conductivity in SOFC cathodes —	358
9.2	SOFC chromium poisoning —	371
9.3	Proton conductivity in IT-SOFC electrolytes —	374
9.4	Lithium ion batteries —	375
9.5	Water splitting photoelectrodes —	377

10 Radiation damages — 382

11 Background subtraction — 389

11.1 Optical absorption spectra of phycocyanin on a photoelectrode — 389

11.2 NEXAFS data on CuWO_4 from BESSY-II — 390

11.3 Treatment of optical Raman spectra — 396

11.4 Background subtraction for an empty cell — 398

Appendix — 401

References — 413

Index — 460
