Preface — V

1	Polymeric surfactants and colloid stability – general introduction — 1
1.1	Polymeric surfactants in disperse systems — 1
1.2	Polymers (macromolecules) — 2
1.3	Single chain conformations — 4
1.4	Polymer properties — 5
1.5	Outline of the book — 6
2	General classification of polymeric surfactants — 11
2.1	Homopolymers — 11
2.2	Random copolymers — 11
2.3	Block and graft copolymers — 12
2.4	Polymeric surfactants based on polysaccharides — 13
2.5	Natural polymeric biosurfactants — 17
2.6	Silicone surfactants — 19
2.7	Polymeric surfactants for nonaqueous dispersions — 20
2.8	Polymerizable surfactants — 22
3	Solution properties of polymeric surfactants — 25
3.1	Polymer conformation and structure — 25
3.2	Free energy of mixing of polymer with solvent – the Flory–Huggins theory — 26
3.3	Viscosity measurements for characterization of a polymer in solution — 31
3.4	Phase separation of polymer solutions — 33
3.5	Solubility parameter concept for selecting the right solvent for a polymer — 34
4	Adsorption and conformation of polymeric surfactants at interfaces — 37
4.1	Introduction — 37
4.2	Polymers at interfaces — 38
4.3	Theories of polymer adsorption — 42
4.4	Scaling theory for polymer adsorption — 50
4.5	Experimental techniques for studying polymeric surfactant adsorption — 52
4.6	Measurement of the adsorption isotherm — 52
4.7	Measurement of the fraction of segments p — 53

4.8	Determination of the segment density distribution $\rho(z)$ and adsorbed layer thickness δ_h —	53
4.9	Examples of the adsorption isotherms of nonionic polymeric surfactants —	56
4.10	Adsorbed layer thickness results —	60
4.11	Kinetics of polymer adsorption —	62
5	Stabilization of disperse systems using polymeric surfactants —	65
5.1	Introduction —	65
5.2	Interaction between particles or droplets containing adsorbed polymer layers —	65
5.2.1	Mixing interaction G_{mix} —	66
5.2.2	Elastic interaction G_{el} —	68
5.2.3	Total energy of interaction —	69
5.2.4	Criteria for effective steric stabilization —	70
5.3	Measurement of steric repulsion between adsorbed layers of polymeric surfactants —	70
5.3.1	Surface force methods —	70
5.3.2	Atomic Force Microscopy (AFM) measurements —	73
6	Flocculation of disperse systems containing adsorbed polymeric surfactants —	79
6.1	Introduction —	79
6.2	Weak (reversible) flocculation —	79
6.3	Incipient flocculation —	83
6.4	Depletion flocculation —	85
6.5	Bridging flocculation by polymers and polyelectrolytes —	86
7	Polymeric surfactants for stabilization of emulsions and nanoemulsions —	91
7.1	Introduction —	91
7.2	Polymeric surfactants for prevention of emulsion and nanoemulsion flocculation —	92
7.3	Polymeric surfactants for reduction of Ostwald ripening —	94
7.4	Polymeric surfactants for reducing (or eliminating) coalescence —	101
8	Polymeric surfactants for stabilizing suspensions —	113
8.1	Introduction —	113
8.2	Examples of polymeric surfactants for aqueous suspensions —	114
8.3	Criteria for effective stabilization of suspensions —	117
8.4	Polymeric surfactants for stabilizing preformed latex dispersions —	119

8.5	Polymeric surfactants for stabilizing aqueous suspensions of hydrophobic organic particles — 122
8.6	Assessment of the long-term physical stability of suspensions — 123
8.6.1	Assessment of the structure of the solid/liquid interface — 124
8.6.2	Bulk properties of suspensions — 125
9	Polymeric surfactants in emulsion and dispersion polymerization — 139
9.1	Introduction — 139
9.2	Emulsion polymerization — 139
9.3	Dispersion polymerization — 149
10	Polymeric surfactants in pharmacy — 157
10.1	Introduction — 157
10.2	PVP/SDS system for stabilizing nanosuspensions of drugs — 157
10.3	Poloxamers for stabilizing suspensions and emulsions in pharmacy — 170
10.4	Polymeric surfactants for the preparation of nanoparticles for drug delivery — 172
11	Polymeric surfactants in cosmetics and personal care products — 195
11.1	Introduction — 195
11.2	Stabilization of O/W and W/O emulsions using polymeric surfactants — 195
11.3	Use of polymeric surfactants for stabilizing nanoemulsions in cosmetics — 199
11.4	Stabilizing nonaqueous dispersions for sunscreens — 207
11.5	Use of polymeric surfactants for stabilizing liposome and vesicles — 220
11.6	Polymeric surfactants in multiple emulsions — 224
12	Polymeric surfactants in paints and coatings — 231
12.1	Introduction — 231
12.2	Use of polymeric surfactants in emulsion polymerization — 231
12.3	Use of polymeric surfactants for stabilizing preformed latex particles — 235
12.4	Dispersion polymerization — 238
13	Polymeric surfactants in agrochemicals — 243
13.1	Introduction — 243
13.2	Polymeric surfactants in suspension concentrates (SCs) — 243
13.3	Emulsion concentrates (EWs) — 252

13.4	Suspoemulsions — 255
13.5	Oil-based suspension concentrates — 258
14	Polymeric surfactants in the food industry — 261
14.1	Introduction — 261
14.2	Structure of proteins — 262
14.3	Interfacial properties of proteins at the liquid/liquid interface — 264
14.4	Proteins as emulsifiers — 265
14.5	Protein-polysaccharide interactions in food colloids — 265
14.6	Polysaccharide-surfactant interactions — 267
14.7	Emulsion stability using polymeric surfactants — 268
Index	— 273
