Preface — vii

Zhihong Zhang, Qingming Luo

1	Fluorescent Protein Labeling Techniques — 1
1.1	Introduction — 1
1.2	Fluorescent proteins and their mutants — 2
1.2.1	Colorful fluorescent proteins — 3
1.2.2	Fluorescent proteins with LSSs — 6
1.2.3	Photon-activatable and photon-switchable fluorescent proteins — 7
1.2.4	Light-sensitive fluorescent proteins — 9
1.2.5	Timer fluorescent protein — 10
1.3	Reporter fluorescent protein probes — 11
1.3.1	Tracking proteins in live cells — 11
1.3.2	Monitoring of gene expression in live cells — 14
1.3.3	Biological applications of photon-switchable proteins and photon-activatable proteins — 15
1.4	Functional fluorescent protein probes — 18
1.4.1	Redox probes — 18
1.4.2	ATP fluorescent protein probes — 21
1.4.3	pH probes — 22
1.4.4	Voltage-sensitive probes — 24
1.4.5	Calcium probes — 26
1.4.6	Mercury ion probes — 30
1.4.7	Copper ion probes — 30
1.4.8	Zinc ion probes — 31
1.5	Fluorescence resonance energy transfer (FRET) probes — 32
1.5.1	Introduction of FRET — 32
1.5.2	FRET imaging in cell biology research — 34
1.5.3	Intramolecular FRET probes — 36
1.5.4	Intermolecular FRET probes — 40
1.6	BiFC technology based on fluorescent proteins — 43
1.6.1	Establishment of the BiFC detection method — 43
1.6.2	Characteristics of BiFC technology — 44
1.6.3	Applications of BiFC technology — 46
1.6.4	Quantitative detection of protein interaction based on fluorescence signal of BiFC — 48
1.6.5	Limiting factors of bimolecular fluorescent complementation — 48
1.6.6	Outlook for BiFC — 49
1.7	Intravital applications of fluorescent proteins in tumor imaging — 49

1.7.1	In vivo tumor optical imaging based on endogenously expressed fluorescent protein —	50
1.7.2	Optical imaging of tumor in vivo with targeting FP probes —	59
1.7.3	Prospects —	62
1.8	Applications of fluorescent protein transgenic mice in intravital immune optical imaging —	63
1.8.1	Fluorescent protein transgenic animal models —	63
1.8.2	Applications of fluorescent protein-labeled pathogens in infection and immune imaging —	68
Bibliography —		74

Yu Li, Lingyu Zeng, Zhihong Liu, Jingui Qin

2	Two-photon Molecular Probe —	93
2.1	Introduction of two-photon absorption —	93
2.1.1	The basic concept of 2PA —	93
2.1.2	Measurements of 2PA effect —	96
2.1.3	Introduction to application of 2PA effect —	99
2.2	Molecular design and structure-property relationships of organic TPA materials —	103
2.2.1	One-dimensional asymmetric D- π -A molecules —	104
2.2.2	One-dimensional symmetric molecules —	107
2.2.3	Porphyrins and expanded porphyrinoids —	112
2.2.4	Multidimensional branched 2PA materials —	116
2.3	The development of two-photon fluorescent probes —	119
2.3.1	Brief introduction to response principle of fluorescent probes —	120
2.3.2	Traditional fluorescent probes for two-photon imaging —	122
2.3.3	Typical fluorophores for TP probes —	122
2.3.4	Research development of TP probes —	125
2.3.5	Research prospection of TP probes —	181
Acknowledgment —		186
Bibliography —		186

Zhenli Huang, Yina Wang, Fan Long, Zhe Hu, Zeyu Zhao

3	Super-resolution Localization Microscopy —	194
3.1	Introduction and background —	194
3.1.2	Resolution limit of optical microscope —	196
3.1.3	Improving the resolution of optical microscope —	197
3.1.4	A historical overview of super-resolution localization microscopy —	197
3.1.5	Breaking the resolution limit by single-molecule localization —	199
3.2	Fluorescence probes for super-resolution localization microscopy —	200
3.2.1	Ensemble and single-molecule fluorescence —	200

3.2.2	Fluorescence probes and specific labeling —	202
3.2.3	Fluorescence ON/OFF control —	204
3.2.4	Choosing the right fluorescence probes —	205
3.3	Methods and instrumentation in super-resolution localization microscopy —	208
3.3.1	Super-resolution localization microscopy methods: PALM versus STORM —	208
3.3.2	Super-resolution localization microscopy methods: Others —	210
3.3.3	Instrumentation in super-resolution localization microscopy: Basic structure —	210
3.3.4	Instrumentation in super-resolution localization microscopy: Key components —	211
3.3.5	Instrumentation in super-resolution localization microscopy: A typical setup —	214
3.3.6	Advances in super-resolution localization microscopy: Multicolor and 3D imaging —	216
3.3.7	Commercial super-resolution localization microscopes —	217
3.4	Data analysis in super-resolution localization microscopy —	218
3.4.1	Theoretical localization precision —	218
3.4.2	Practical aspects for determining spatial resolution —	219
3.4.3	Single-molecule localization for sparse emitters —	220
3.4.4	Single-molecule localization for high-density emitters —	223
3.4.5	Key steps in image analysis and reconstruction —	225
3.4.6	Data analysis software —	226
3.5	Example applications in super-resolution localization microscopy —	227
3.5.1	Imaging in 2D —	227
3.5.2	Imaging in 3D —	228
3.6	Conclusions and future prospects —	229
	Bibliography —	230

Da Xing, Sihua Yang

4	Photoacoustic Molecular (Functional) Imaging —	235
4.1	Introduction —	235
4.2	PAI principle, algorithm, and system —	238
4.2.1	PAI principle —	238
4.2.2	Excitation of photoacoustic signal —	239
4.2.3	Photoacoustic scanning method and its imaging algorithm —	247
4.2.4	PAI system —	254
4.2.5	Special problems involved —	270
4.3	Domestic and foreign statuses —	275
4.3.1	Foreign research status —	275
4.3.2	Domestic research status —	286

- 4.4 Application development trend — 298**
- 4.4.1 Application research of photoacoustic microcirculation imaging and early tumor detection and treatment monitoring — 299**
- 4.4.2 Research on application of living body photoacoustic blood function parameters (blood oxygen and carbon oxygen saturation) detection — 306**
- 4.4.3 Application research on photoacoustic identification and imaging of vulnerable plaque components in blood vessels — 309**
- 4.4.4 Application research on thermoacoustic imaging in testing of low-dentistry foreign bodies — 313**
- 4.4.5 Application research on thermoacoustic imaging in testing of breast cancer — 315**

Bibliography — 318

Yong Deng, Xiaoquan Yang, Qingming Luo

- 5 Optical Molecular Imaging for Small Animals *in vivo* — 324**
- 5.1 Models of light propagation in tissue — 324**
- 5.1.1 Introduction — 324**
- 5.1.2 Light transport equation — 325**
- 5.1.3 Diffusion approximation method — 329**
- 5.1.4 Monte Carlo method — 333**
- 5.2 Diffuse optical tomography — 343**
- 5.2.1 Introduction — 343**
- 5.2.2 DOT mode — 344**
- 5.2.3 Image reconstruction methods in DOT — 348**
- 5.2.4 Applications in biomedical research — 352**
- 5.3 *In vivo* optical molecular imaging of small animals — 354**
- 5.3.1 Introduction — 354**
- 5.3.2 Planar fluorescence molecular imaging — 355**
- 5.3.3 Fluorescence molecular tomography — 361**
- 5.3.4 Bioluminescence tomography — 370**
- 5.4 Multimodality molecular imaging of small animals *in vivo* — 375**
- 5.4.1 Introduction — 375**
- 5.4.2 Multimodality molecular imaging systems — 376**
- 5.4.3 Image reconstruction and multimodal image fusion — 382**
- 5.4.4 Applications in biomedical research — 387**

Bibliography — 393

Index — 402
