Preface — V

List of Figures — XI

1 Introduction — 1

- 1.1 Terminology and notation — 1
- 1.2 Notes on regular graphs — 5
- 1.3 Elements of the theory of graph spectra — 7

2 Spectral properties — 15

- 2.1 Basic properties of the spectrum of a regular graph — 15
- 2.2 Operations on regular graphs and resulting spectra — 17
- 2.3 Other kinds of graph spectrum — 22
 - 2.3.1 Laplacian and signless Laplacian spectrum — 22
 - 2.3.2 Seidel spectrum — 26
- 2.4 Deducing regularity from the spectrum — 27
- 2.5 Spectral distances of regular graphs — 28
- 2.6 Inequalities for eigenvalues — 33
 - 2.6.1 Second largest eigenvalue — 33
 - 2.6.2 Toughness of regular graphs — 36
 - 2.6.3 More inequalities — 37
- 2.7 Extremal regular graphs — 39
- 2.8 Eigenvalue estimation — 43
- 2.9 Eigenvalue distribution — 46

3 Particular types of regular graph — 48

- 3.1 Non-complete extended p -sums — 49
- 3.2 Walk-regular graphs — 51
- 3.3 Distance-regular graphs — 55
 - 3.3.1 Basic properties — 56
 - 3.3.2 Classical examples — 61
 - 3.3.3 Inequalities for eigenvalues — 65
 - 3.3.4 Geometric graphs — 67
 - 3.3.5 Deducing distance-regularity from the spectrum — 68
- 3.4 Strongly regular graphs — 70
 - 3.4.1 Basic properties — 71
 - 3.4.2 Small examples — 75
 - 3.4.3 Conference graphs — 76
 - 3.4.4 Generalized Latin squares and partial geometries — 81

3.4.5	Spectral distances —	84
3.5	Kneser graphs —	86
3.6	Regular graphs of line systems —	88
3.6.1	Equidistant lines —	88
3.6.2	Root systems —	93
3.7	Star complements —	98
3.7.1	Reconstruction theorem and its consequences —	99
3.7.2	Star complement technique —	100
3.7.3	Star complements in regular graphs —	104
3.8	Partially balanced incomplete block designs —	105
3.8.1	Balanced incomplete block designs —	107
3.8.2	Partially balanced incomplete block designs with 2 associate classes —	113
4	Determinations of regular graphs —	120
4.1	Exceptional regular graphs —	120
4.1.1	Regular graphs with $\lambda_2 \leq 1$ —	121
4.2	Reflexive bipartite regular graphs —	122
4.3	Integral regular graphs —	126
4.3.1	Integral cubic graphs —	127
4.3.2	Integral 4-regular graphs —	129
4.3.3	Integral regular line graphs —	132
4.4	Regular graphs with a small number of distinct eigenvalues —	141
4.4.1	Strongly regular graphs of larger order —	141
4.4.2	Regular graphs with 4 distinct eigenvalues —	146
4.4.3	Bipartite regular graphs with 3 distinct non-negative eigenvalues —	152
4.5	Regular graphs determined by their spectra —	165
4.5.1	Line graphs —	166
4.5.2	Graphs with at most 4 distinct eigenvalues —	169
4.5.3	Some constructions —	170
5	Expanders —	173
5.1	Combinatorial approach —	174
5.2	Algebraic approach —	179
5.3	Random walks —	184
5.4	Constructions —	187
5.4.1	Covers of graphs —	188
5.4.2	Zig-zag product —	189
5.4.3	Examples of Cayley expanders —	191
5.5	Codes from graphs —	194
5.5.1	A probabilistic algorithm —	195

5.5.2 Error correcting codes — 196

6 Distance matrix of regular graphs — 199

6.1 Definition and a Hoffman-like polynomial — 199

6.2 D -spectrum of certain regular graphs — 200

6.3 D -spectrum of distance-regular graphs — 206

6.4 Regular graphs constrained by D -spectrum — 212

References — 217

Graph index — 231

Index — 233
