List of figures	XI
List of tables	XV
List of symbols	XVII
1 Introduction	1
1.1 Motivation and problem statement	1
1.2 Related work in laminar aircraft design	4
1.3 Thesis objectives and approach	7
2 Fundamentals and state of the art	9
2.1 Fundamentals of preliminary aircraft design	9
2.2 Laminar flow theory	12
2.2.1 Viscous flows and boundary-layer theory	12
2.2.2 Laminar-turbulent transition	16
2.2.3 Linear stability theory	17
2.2.4 Transition prediction	20
2.2.5 Instability mechanisms and transition on swept wings	26
2.2.6 Laminarization techniques (NLF, LFC, and HLFC)	32
2.3 HLFC design and integration aspects	35
2.3.1 HLFC aerodynamic wing design	35
2.3.2 HLFC system and structural integration aspects	38
2.3.3 HLFC operational aspects	40
3 Method for aircraft design with hybrid laminar flow control	43
3.1 Integrated aircraft design environment MICADO	43
3.1.1 Software architecture	45
3.1.2 Overall aircraft design approach	50
3.1.3 Integration of HLFC methods into MICADO	53
3.1.4 Design interactions: mass snowball effect and aircraft resizing	54

3.2	Conventional aircraft design and analysis methods	56
3.2.1	Component sizing	59
3.2.2	Engine modeling	60
3.2.3	Full-configuration aerodynamic analysis	61
3.2.4	Mass estimation	67
3.2.5	Systems sizing and power distribution	69
3.2.6	Mission analysis and fuel planning	71
3.2.7	Design evaluation: performance and cost analysis	76
3.3	HLFC aerodynamic wing design method	78
3.3.1	Design approach and integration into MICADO	81
3.3.2	Assumptions and relations for conical 2.5D approach	83
3.3.3	Validation case for conical 2.5D wing drag prediction method	88
3.3.4	2D transonic flow solver (MSES)	90
3.3.5	Transition prediction modules (STABTOOL)	92
3.3.6	HLFC airfoil analysis process	96
3.3.7	HLFC airfoil design and optimization procedure	106
3.3.8	HLFC airfoil aerodynamic database	112
3.4	HLFC system design method	120
4	Application of developed method to HLFC overall aircraft design	125
4.1	Design and validation of long range reference aircraft	126
4.2	Design sensitivities and HLFC integration potential	140
4.3	HLFC aircraft design and optimization	144
4.3.1	HLFC aircraft design: single point evaluation	145
4.3.2	HLFC overall aircraft design studies	155
4.3.3	HLFC overall aircraft design optimization	158
5	Conclusions and outlook	161
	Bibliography	165
A	MICADO parameters and methods	191
B	Conical-flow equations	193
C	Supplementary data of MICADO long range reference aircraft design	195
