Preface *xi*

About the Authors *xiii*

1	Introduction	1
1.1	Traditional Metallic Biomaterials	1
1.2	Revolutionizing Metallic Biomaterials and Their New Biofunctions	3
1.2.1	What are Revolutionizing Metallic Biomaterials?	3
1.2.2	Antibacterial Function	3
1.2.3	Promotion of Osteogenesis	5
1.2.4	Reduction of In-stent Restenosis	8
1.2.5	MRI Compatibility	9
1.2.6	Radiopacity	10
1.2.7	Self-Adjustment of Young's Modulus for Spinal Fixation Applications	10
1.3	Technical Consideration on Alloying Design of Revolutionizing Metallic Biomaterials	10
1.3.1	Evolution of Mechanical Properties with Implantation Time	10
1.3.2	Biocorrosion or Biodegradation Behavior and Control on Ion Release	14
1.4	Novel Process Technologies for Revolutionizing Metallic Biomaterials	16
1.4.1	3D Printing	17
1.4.2	Safety and Effectiveness of Biofunctions	17
1.4.3	Severe Plastic Deformation	20
	References	20
2	Introduction of the Biofunctions into Traditional Metallic Biomaterials	31
2.1	Antibacterial Metallic Biomaterials	31
2.1.1	Antibacterial Metals	31
2.1.2	Antibacterial Stainless Steels	33
2.1.2.1	Ag-Bearing Antibacterial Stainless Steels	33
2.1.2.2	Cu-Bearing Antibacterial Stainless Steels	34
2.1.2.3	Other Antibacterial Stainless Steels	36
2.1.3	Antibacterial Ti Alloys	37
2.1.3.1	Antibacterial Ti–Ag Alloys	37

2.1.3.2	Antibacterial Ti–Cu Alloys	37
2.1.3.3	Antibacterial TiNi-Based Alloys	38
2.1.3.4	Surface-Modified Ti Alloys with Antibacterial Property	38
2.1.4	Antibacterial Mg Alloys	39
2.1.5	Antibacterial Bulk Metallic Glasses	40
2.2	MRI Compatibility of Metallic Biomaterials	40
2.2.1	MRI Compatibility of Traditional Metallic Biomaterials	44
2.2.2	MRI-Compatible Zr Alloys	44
2.2.3	MRI-Compatible Nb Alloys	46
2.2.4	Other MRI-Compatible Alloys	47
2.3	Radiopacity of Metallic Biomaterials	47
2.3.1	Stainless Steel Stents	48
2.3.2	Co–Cr Stents	48
2.3.3	Nitinol Stents	49
2.3.4	Ta Stents	49
2.3.5	Other Metallic Stents	49
	References	50
3	Development of Mg-Based Degradable Metallic Biomaterials	59
3.1	Background	59
3.2	Mg-Based Alloy Design and Selection Considerations	60
3.2.1	Biodegradation	60
3.2.2	Biocompatibility	64
3.2.3	Considerations in Mg-Based Alloy Design	64
3.2.3.1	Mechanical Property Requirements	64
3.2.3.2	Material Compositional Design	65
3.2.3.3	Toxicity and Degradation Consideration	66
3.2.4	Methods to Improve Mechanical Property	67
3.2.4.1	<i>In Situ</i> Strengthening	67
3.2.4.2	Post-processing	75
3.3	State of the Art of the Mg-Based Alloy Material Research	83
3.3.1	Pure Mg	83
3.3.2	Mg-Based Alloys with Essential Elements	84
3.3.2.1	Mg–Ca-Based Alloys	84
3.3.2.2	Mg–Si- and Mg–Sr-Based Alloys	85
3.3.3	Mg-Based Alloys with High Strength	86
3.3.3.1	Mg–Zn-Based Alloys	87
3.3.3.2	Mg–RE-Based Alloys	87
3.3.4	Mg-Based Alloys with Special Biofunctions	88
3.3.5	Mg-Based Alloys with Improved Corrosion Resistance	90
3.3.6	Mg-Based Alloys with Bioactive Surfaces	91
3.3.6.1	Drug-Releasing Coatings	91
3.3.6.2	Biomimetic Coatings	91
3.4	State of the Art of Medical Mg-Based Alloy Device Research	92
3.4.1	Cardiovascular Devices	92
3.4.2	Orthopedic Devices	94

3.5	Challenges and Opportunities for Mg-Based Biomedical Materials and Devices	97
	References	98
4	Development of Fe-Based Degradable Metallic Biomaterials	113
4.1	Background	113
4.2	Pure Iron	114
4.2.1	Mechanical Properties of Pure Iron	114
4.2.2	Metabolism and Toxicity of Pure Iron	114
4.2.2.1	The Distribution of Iron in Human Body	114
4.2.2.2	Physiological Function of Iron in Human Body	114
4.2.2.3	Iron Absorption	114
4.2.2.4	The Maintenance of Iron Balance	117
4.2.2.5	The Toxicity of Iron	118
4.2.3	Basic Properties of Pure Iron	118
4.2.3.1	Effects of Processing Technologies on the Microstructure of Pure Iron	118
4.2.4	Degradation Behavior of Pure Iron in the Physiological Environment	119
4.2.5	<i>In Vitro</i> Experiments of Pure Iron	121
4.2.6	<i>In Vivo</i> Experiments of Pure Iron	123
4.3	Iron Alloys	127
4.4	Iron-Based Composites	139
4.4.1	Compositing with Metals	139
4.4.2	Compositing with Nonmetallic Materials	141
4.4.3	<i>In Vitro</i> Biocompatibility of Iron-Based Composites	142
4.5	Surface Modification of Iron-Based Materials	144
4.5.1	Surface Modification for Improving Biocompatibility	144
4.5.2	Surface Modification for Regulating Degradation Behavior	147
4.6	New Fabrication Technologies for Iron-Based Materials	150
4.6.1	Electroforming	150
4.6.2	Equal Channel Angular Pressing	150
4.6.3	Metal Injection Molding	151
4.6.4	Cold Gas Dynamic Spraying	151
4.6.5	3D Printing	153
4.7	Outlook	154
	References	156
5	Development of Zn-Based Degradable Metallic Biomaterials	161
5.1	Backgrounds	161
5.2	Body Zn Distribution and Mobilization	162
5.3	The Physiological Function of Zn	162
5.4	State of the Art of the Zn-Based Alloy Material Research	164
5.4.1	Pure Zn	164
5.4.2	Binary Zn-Based Alloys	165
5.4.2.1	The Microstructure of Binary Zn-Based Alloy	166

5.4.2.2	The Mechanical Properties of Binary Zn-Based Alloy	167
5.4.2.3	The Degradation Behavior of Binary Zn-Based Alloys	167
5.4.2.4	The Biocompatibility of Binary Zn-Based Alloys	170
5.4.3	Ternary Zn-Based Alloys	174
5.4.3.1	The Microstructure of Ternary Zn-Based Alloys	174
5.4.3.2	The Mechanical Properties of Ternary Zn-Based Alloys	175
5.4.3.3	The Degradation Behavior of Ternary Zn-Based Alloys	176
5.4.3.4	The Biocompatibility of Ternary Zn-Based Alloys	178
5.4.4	Zn-Based Composites	178
5.4.4.1	Zn–ZnO Composites	178
5.4.4.2	Zn–Nanodiamond Composites	182
5.5	Challenges and Opportunities for Zn-Based Biomedical Materials and Devices	182
	References	185
6	Development of Bulk Metallic Glasses for Biomedical Application	189
6.1	Background	189
6.1.1	Oxide Glasses as Biomaterials	189
6.1.2	Bulk Metallic Glasses	191
6.1.3	Fabrication of Bulk Metallic Glasses	191
6.1.4	Properties of Bulk Metallic Glasses	193
6.2	Nonbiodegradable Bulk Metallic Glasses	196
6.2.1	Ti-Based Bulk Metallic Glasses	197
6.2.2	Zr-Based Bulk Metallic Glasses	198
6.2.3	Fe-Based Bulk Metallic Glasses	201
6.3	Biodegradable Bulk Metallic Glasses	202
6.3.1	Mg-Based Bulk Metallic Glasses	202
6.3.2	Ca-Based Bulk Metallic Glasses	207
6.3.3	Zn-Based Bulk Metallic Glasses	208
6.3.4	Sr-Based Bulk Metallic Glasses	209
6.4	Perspectives on Future R&D of Bulk Metallic Glass for Biomedical Application	209
6.4.1	How to Design Better Bulk Metallic Glasses	209
6.4.1.1	Functional Minor Alloying Elements	209
6.4.1.2	The Glass-Forming Ability	210
6.4.2	Surface Modification of Bulk Metallic Glasses	211
6.4.3	How to Manufacture Medical Devices Using Bulk Metallic Glasses	211
6.4.4	Future Biomedical Application Areas of Bulk Metallic Glass	211
	References	213
7	Development of Bulk Nanostructured Metallic Biomaterials	223
7.1	Background	223
7.1.1	Processing Methods	224
7.1.2	Property Variation	225
7.1.3	Structure–Property Relationship	228

7.2	Representative Bulk Nanostructured Metallic Biomaterials	230
7.2.1	Pure Ti	230
7.2.2	Ti Alloys	235
7.2.3	Stainless Steels	238
7.2.4	Co–Cr–Mo Alloy	239
7.2.5	Mg Alloys	243
7.2.6	Pure Fe and Other Fe-Based Alloys	244
7.2.7	Pure Cu	244
7.2.8	Pure Ta	244
7.2.9	Pure Zr	245
7.3	Future Prospect on Bulk Nanostructured Metallic Biomaterials	245
	References	246
8	Titanium Implants Based on Additive Manufacture	255
8.1	Introduction	255
8.2	AM Technologies Applicable for Ti-Based Alloys	256
8.2.1	Powder Materials Used in AM Technology	257
8.2.2	Architecture Design in AM Technology	257
8.2.3	Processing Methods of AM Technology	259
8.2.4	Posttreatment of AM Technology	263
8.2.5	Surface Forming Quality of AM Technology	264
8.3	Microstructure and Performance Evaluation of Ti-Based Alloys Fabricated by AM Technology	265
8.3.1	Microstructure of Ti-Based Alloys Fabricated by AM Technology	265
8.3.2	Mechanical Properties of Ti-Based Alloys Fabricated by AM Technology	267
8.3.3	<i>In Vitro</i> Biological Evaluation of Ti-Based Implants Fabricated by AM Technology	273
8.3.4	Animal Experiments of Ti-Based Implants Fabricated by AM Technology	275
8.3.5	Clinical Trials of Ti-Based Implants Fabricated by AM Technology	277
8.4	Prospects	278
	References	285
9	Future Research on Revolutionizing Metallic Biomaterials	293
9.1	Tissue Engineering Scaffolds with Revolutionizing Metallic Biomaterials	293
9.2	Building Up of Multifunctions for Revolutionizing Metallic Biomaterials	296
9.3	Intelligentization for Revolutionizing Metallic Biomaterials	300
	References	304
	Index	307
