Foreword by George E. Keller, II	<i>xi</i>
Preface	<i>xiii</i>
Software Selection and Copyright Notice	<i>xvii</i>
Acknowledgments	<i>xix</i>
About the Authors	<i>xxi</i>
List of Computer Files	<i>xxiii</i>

1	Simulation of Adsorption Processes	1
1.1	Introduction to Gas-phase Adsorption Technologies	1
1.2	Core Concepts in Gas Adsorption	2
1.2.1	The Adsorption Process	2
1.2.2	How the Driving Forces Achieve Separation	3
1.3	Isotherms	4
1.3.1	The Langmuir Isotherm (1918)	5
1.3.2	The Linear Isotherm	5
1.3.3	The Brunauer–Emmett–Teller (BET) Isotherm (1938)	5
1.3.4	The Freundlich Isotherm (1906)	6
1.3.5	The Sips (Langmuir–Freundlich) Isotherm (1948)	6
1.3.6	The Toth Isotherm (1971)	6
1.3.7	Summary	6
1.4	The Properties of Packed Beds	6
1.4.1	Void Fractions	7
1.4.2	External Voids	8
1.4.3	Internal Voids	8
1.4.4	Densities	8
1.4.4.1	Bulk Density	8
1.4.4.2	Skeletal or Solid Density	9
1.4.4.3	Envelope or Particle Density	10
1.4.4.4	Caveats	10
1.4.5	Relationships	10
1.4.6	Gas-phase Behavior	10
1.4.6.1	Pressure Drop	10
1.4.6.2	Compressibility	11

1.5	PSA and TSA Implementation Details	12
1.5.1	Common Adsorbent Characteristics	12
1.5.2	Common Process Configurations	12
1.6	Introduction to Aspen Adsorption	13
1.7	PSA Workshop: Aspen Adsorption Modeling for Air Separation	15
1.7.1	Adding Components to an Aspen Adsorption Simulation	17
1.7.2	Creating a Flowsheet in Aspen Adsorption	22
1.7.3	Specifying Operating Conditions: Tables and Forms	33
1.7.4	Scheduling Events with the Cycle Organizer	42
1.7.5	Running an Aspen Simulation	51
1.7.6	Viewing and Exporting Simulation Results	51
1.8	PSA Workshop: Hydrogen Separation in Aspen Adsorption	57
1.8.1	Define the Components and Property Model	58
1.8.2	Creating a Flowsheet in Aspen Adsorption	63
1.8.3	Run a Breakthrough Simulation	65
1.8.4	Create the PSA Flowsheet	77
1.9	PSA Workshop: Modeling Hydrogen Separation using gCSS	87
1.9.1	Define the Components and Property Models	91
1.9.2	Working with Model Libraries: Advanced Flowsheet Options	95
1.9.3	Introduction to Scripting: Set Repeated Values and Initialize Blocks	108
1.9.4	Inspecting Blocks: Advanced Operating Conditions	112
1.9.5	Defining the Cycle Organizer	119
1.9.6	Viewing Results	127
1.10	TSA Workshop: Temperature Swing Adsorption for Air Drying	128
1.11	Conclusions	140
1.12	Practice Problems	143
1.12.1	Introducing a gas_interaction Unit into Workshop 1	143
1.12.2	Naphtha Upgrading Using Adsorption	145
1.13	Nomenclature	149
	Bibliography	150
2	Simulation of SMB Chromatographic Processes	155
2.1	Introduction to Chromatography	155
2.1.1	Mathematical Differences from Gas Adsorption	155
2.1.1.1	The Trace Liquid Assumption	155
2.1.1.2	Concentration Versus Partial Pressure	156
2.1.2	Thermodynamic Differences from Gas Adsorption	156
2.1.2.1	Isotherms	156
2.1.2.2	Physical Property Models	156
2.2	Introduction to SMB Chromatography	156
2.3	SMB Implementation Details	157
2.3.1	Common Process Configurations	157
2.3.2	M-Values	160
2.3.3	Scale-Up Concerns	161
2.3.4	Pressure Drop Limitations	162
2.3.5	Introduction to Operational Modes	163

2.4	SMB Workshop: Simulate a Four-Zone SMB in Aspen Chromatography for the Separation of Tröger's Base Enantiomers	163
2.4.1	Creating a Flowsheet in Aspen Chromatography	163
2.4.2	Adding Components to an Aspen Chromatography Simulation	164
2.4.3	The Chrom_CCC_separator2 Block	165
2.4.4	Viewing Results	188
2.5	Tandem SMB Workshop: Simulate a Separation with Dual SMB Columns	192
2.6	Practice Problems	194
2.6.1	Run Workshop 2.4 as a Steady-State Simulation	194
2.6.2	Simulation of an Industrial-Scale Xylene Separation Using Literature Data	200
2.6.3	Simulate a Five-Zone SMB System for Separating Phenylalanine, Tryptophan, and Methionine	202
	Bibliography	206
3	Shortcut Design of SMB Systems	213
3.1	General Concepts	213
3.1.1	Mass Balances	215
3.1.2	Differential Equations	217
3.1.3	The Method of Characteristics	218
3.2	Triangle Theory	219
3.2.1	Notations	219
3.2.2	Introduction	219
3.2.3	Constraints on the System	222
3.3	Triangle Theory Workshop: Design of a System for the Separation of Amino Acids	224
3.4	Exercise 1: Calculating Transitions in a Fixed Bed Using Mathematica	230
3.4.1	Differential Equations – Analysis	232
3.4.2	Constructing the Solution from Eigenvectors and Eigenvalues	238
3.4.3	Use the Steady-State Information to Constrain Operating Conditions	239
3.4.4	Calculate the Curves Defined by the Eigenvectors	241
3.4.5	Calculate the Eigenvalues along the Transition	244
3.4.6	Calculate the Concentrations in Time and Space	246
3.4.7	Account for Shock Waves	246
3.5	Exercise 2: Constructing the Constraints on the TMB System in Mathematica	249
3.6	Standing Wave Design	253
3.6.1	Standing Wave Design in a Nonlinear Ideal System	254
3.6.2	Standing Wave Design in a System with Nonlinear Isotherm and Significant Mass Transfer Effects	261
3.7	Standing Wave Design Workshop: Calculating the Operating Conditions for an Ideal and a Nonideal System	265
3.8	Conclusions	271

3.9	Practice Problems	272
3.9.1	Use the Triangle Theory Tool and the Standing Wave Design Tool to Create an Aspen Simulation of the Separation of 1-phenol-1-propanol on Tribenzoate	272
	Bibliography	274
4	Operational Modes of SMB Processes	283
4.1	Overview	283
4.2	Selection of Operational Modes	284
4.3	Varicol	284
4.3.1	Design Heuristics and Examples	286
4.3.2	Workshop 1: Apply Varicol to the 4-Zone SMB Model	287
4.4	PowerFeed	293
4.4.1	Design Heuristics and Examples	294
4.4.2	Workshop 2: Apply PowerFeed to the Four-Zone SMB Model	297
4.5	ModiCon	309
4.5.1	Design Heuristics and Examples	309
4.5.2	Workshop 3: Apply ModiCon to the 4-Zone SMB Model	315
4.6	Combined Modes	323
4.6.1	Workshop 4: Extend Previously Created Flowsheets	323
4.7	Parallel Two Zones	330
4.7.1	Introduction to Parallel Two Zones	330
4.7.2	Specification Analysis	334
4.7.3	Importing Flowsheets	337
4.8	Conclusions	345
4.9	Practice Problems	345
4.9.1	Simulation of a Five-Zone SMB Unit Using the ModiCon Operational Mode	345
4.9.2	Compare Parallel Two-Zone Results with SMB Results	345
	Bibliography	347
5	Parameter Estimation, Regression, and Sensitivity of Adsorptive and Chromatographic Processes	349
5.1	Empirical Correlations for Physical Properties	349
5.1.1	Axial Dispersion Coefficient	349
5.1.2	Mass Transfer Coefficient	350
5.1.3	Caveats	351
5.2	Parameter Workshop: Regressing against Steady-State Experiments	351
5.2.1	Introduction to "Experiments" In Aspen Software	351
5.2.2	Experimental Data	352
5.2.3	Parameter Regression in Excel	352
5.2.4	Parameter Regression in Aspen Chromatography	363
5.2.4.1	Defining an Estimation Flowsheet	363
5.2.4.2	Entering Experimental Data	364
5.2.4.3	Estimation Settings	368
5.2.4.4	Running an Estimation	370

5.2.5	Parameter Regression In Mathematica	370
5.2.5.1	Defining the Functions	371
5.2.5.2	Entering the Data	372
5.2.5.3	Regression	375
5.3	Parameter Workshop: Regressing Against Dynamic Experiments	376
5.3.1	Problem Description	376
5.3.2	Dynamic Estimation Settings	376
5.3.3	Performance Concerns	380
5.4	Xylene Parameter Regression	380
5.5	Conclusions	386
5.6	Practice Problems	387
5.6.1	Perform Dynamic Parameter Estimation in Aspen Adsorption	387
5.6.2	Sensitivity Analysis Using Scripts in Aspen Adsorption	389
	Bibliography	393

Literature Cited in the Text 395
