Preface *xix*

Part I Introduction to Gas Phase Aggregation Sources 1

- 1 History, Some Basics, and an Outlook 3**
Hellmut Haberland
 - 1.1 Introduction 3
 - 1.2 Three Types of Gas Aggregation Sources 5
 - 1.3 Development of the Magnetron Cluster Source 6
 - 1.4 Deposition Machine and Mass Spectra 9
 - 1.5 Some Experimental Questions 11
 - 1.5.1 How Do the Clusters Start Growing? 11
 - 1.5.2 The Role of Sputtered Dimers 13
 - 1.5.3 Reduction of the Energy of the Impacting Ar⁺ Ions owing to Charge Exchange 13
 - 1.5.4 Formation and Shape of the Racetrack 14
 - 1.5.5 Loss of Intensity 14
 - 1.6 Deposition of Clusters with Variable Kinetic Energy 14
 - 1.7 Outlook and Future Development 17
 - Acknowledgments 18
 - References 18
- 2 Principles of Gas Phase Aggregation 23**
Patrice Mélinon
 - 2.1 The Landscape 23
 - 2.2 Step 2: Nucleation 24
 - 2.2.1 First Phase Transition, Critical Temperature 24
 - 2.2.2 Classical Nucleation Theory 25
 - 2.2.3 CNT Failure for Metal-Like and Covalent-Like Bonding 26
 - 2.3 Kinetic Nucleation Theory 26
 - 2.3.1 Classical Approach: Bimolecular Reaction 26
 - 2.3.2 RRKM Theory: Sticking Coefficient 27
 - 2.3.3 Beyond 29

2.4	Clusters in Real Gases	30
2.4.1	Equilibrium State: Saturated Vapor	30
2.5	$S > 1$: Adiabatic Expansion	31
2.6	$S \gg 1$: Supersonic Beam with Buffer Gas	33
2.7	Size Distribution	33
2.7.1	General Case	33
2.7.2	Von Smoluchowski	34
2.7.2.1	Step 3: Perfect Sticking	34
2.7.2.2	Step 4: Coagulation	35
2.8	Conclusion	36
	References	37

3	Types of Cluster Sources	39
	<i>José A. De Toro, Peter S. Normile, and Christopher Binns</i>	
3.1	High-Vacuum Free Beam Sources	39
3.2	Generic Aspects of Design	39
3.3	Seeded Supersonic Nozzle Source (SSNS)	40
3.4	Thermal Gas Aggregation Source (TGAS)	42
3.5	Sputter Gas Aggregation Source (SGAS)	42
3.6	Laser Ablation Source (LAS)	45
3.7	Pulsed-Arc Cluster Ion Source (PACIS)	46
3.8	Pulsed Microplasma Cluster Source (PMCS)	47
3.9	Comparison and Specialization of Sources	48
	References	49

Part II Modifications of Gas Phase Aggregation Sources 57

4	The Double-Laser Ablation Source Approach	59
	<i>Piero Ferrari, Jan Vanbuel, Yejun Li, Ting-Wei Liao, Ewald Janssens, and Peter Lievens</i>	
4.1	Introduction	59
4.2	Source Description	60
4.2.1	Parameters Influencing Cluster Production	61
4.2.1.1	Laser Energy Density	62
4.2.1.2	Laser and Gas Pulse Timings	63
4.2.1.3	Carrier Gas Pressure	65
4.2.1.4	Target Position in the Source	66
4.3	Studies on Bimetallic Clusters	66
4.3.1	Size-Dependent Properties of Doped Au Clusters	66
4.3.2	Stability Patterns of AlPb_N^+ Clusters	70
4.3.3	Structure and Electronic Properties of Metal-Doped Si Clusters	72
4.3.4	The Production of Ag–Au Nanoalloy Clusters	72
4.4	Conclusions	74
	Acknowledgments	75
	References	75

5	In-Plane Multimagnetron Approach	79
	<i>Grant E. Johnson and Julia Laskin</i>	
5.1	Introduction	79
5.2	The Multitarget Single-Magnetron Approach	82
5.3	The Multimagnetron Approach	86
5.4	Summary	95
	Acknowledgments	96
	References	96
6	Adjustable Multimagnetron Approach	101
	<i>Lidia Martínez</i>	
6.1	Introduction	101
6.2	Design and New Parameters of Multimagnetron Gas Aggregation Sources	104
6.3	Possibilities in the Fabrication of Nanoparticles with Multimagnetron Approach	106
6.3.1	Homogeneous Nanoparticles	106
6.3.2	Heterogeneous Nanoparticles	107
6.3.2.1	Alloyed Nanoparticles	109
6.3.2.2	Core–Shell Nanoparticles	110
6.4	Summary, Perspectives, and Applications	117
	Acknowledgments	118
	References	118
7	Hollow Cylindrical Magnetron	123
	<i>Vitor Toshiyuki Abrao Oiko, Artur Domingues Tavares de Sá, and Varlei Rodrigues</i>	
7.1	Introduction	123
7.2	Project Design and Implementation	124
7.3	Characterization	126
7.4	Cluster Production	128
7.4.1	Cluster Source	128
7.4.2	Simple Metal Nanoclusters	129
7.4.3	Binary Nanoclusters	130
7.5	Alternative Cylindrical Geometries for Magnetron Sputtering	131
7.6	Concluding Remarks	132
	References	133
8	High-Flux DC Magnetron Sputtering	137
	<i>Marco César Maicas Ramos and María del Mar Sanz Lluch</i>	
8.1	Introduction	137
8.2	Gas Flow	139
8.2.1	Beam Aperture	139
8.2.2	Aerodynamic Lenses	142
8.2.3	Gas Pulses	144
8.3	Oxygen-Assisted Synthesis	146
8.3.1	Pulsed DC Magnetron Sources	146

8.4	Ion Beams	148
8.4.1	Ion Collection	148
8.4.2	Ion Beam Focusing	151
8.5	Conclusions	152
	References	153
9	High-Flux Metal Vapor Cell	155
	<i>Gail N. Iles</i>	
9.1	Introduction	155
9.2	Vapor Cell Components	156
9.3	Vapor Pressure	159
9.4	Methods and Techniques	163
9.4.1	Molecular Beam Epitaxy	163
9.4.2	Electron Beam Epitaxy	166
9.5	Devices Using Metal Vapor Cells	167
9.5.1	Leicester University Mesoscopic Particle Source	167
9.5.2	Microgravity Devices	169
9.6	Summary	171
	References	171
10	Microwave Plasma Synthesis of Nanoparticles	175
	<i>Dieter Vollath</i>	
10.1	Introduction	175
10.1.1	Basic Ideas	175
10.1.2	Energy Transfer in a Microwave Plasma	176
10.1.3	Formation of Nanoparticles in a Microwave Plasma	179
10.2	Basic Design of Microwave Plasma Systems and Resulting Products	187
10.3	Realization of Microwave Plasma Systems for Synthesis of Coated Nanoparticles	195
10.4	Conclusions	199
	References	199
11	Enhanced Synthesis of Aggregates by Reduced Temperature, Pulsed Magnetron Sputtering, and Pulsed Buffer Gas Delivery	203
	<i>Vitezslav Stranak and Rainer Hippler</i>	
11.1	Introduction to Nanoparticle Aggregation	203
11.2	Experiment	204
11.3	Kinetic Phenomena during Cluster Growth	205
11.3.1	Thermalization after Magnetron Sputtering	205
11.3.2	Drift of Clusters	206
11.3.3	Passage through an Orifice	207
11.3.4	Temperature Dependence of Cluster Growth	207
11.3.5	Cluster Velocity	209
11.3.6	Cluster Charge	211

11.4	Pulsed Sputtering of Metal Target	212
11.4.1	DC versus DC-Pulsed Magnetron Sputtering	213
11.4.2	Effect of Duty Cycle	215
11.5	Pulsed Delivery of Buffer Gas	216
11.5.1	Pulsed-Gas Delivery and Experiment	217
11.5.2	Cluster Growth during the Gas Pulse	218
11.6	Cluster Mass Flux in a Gas Dynamic System	221
11.7	Conclusions	223
	Acknowledgments	223
	References	223
12	High-Power Pulsed Plasmas	227
	<i>Iris Pilch</i>	
12.1	Background: High-Power Impulse Magnetron Sputtering	227
12.2	Synthesis of Nanoparticles Using High-Power Pulsed Plasmas	230
12.2.1	Charging of Nanoparticles in a Plasma	231
12.2.2	Nanoparticle Growth	233
12.2.3	Growth of Nanoparticles in a Pulsed Plasma	234
12.3	Summary and Outlook	239
	References	240
13	High-Pressure and Reactive Gas Magnetron Sputtering	243
	<i>Lakshmi Kolipaka and Stefan Vajda</i>	
13.1	Introduction	243
13.2	Types of Reactive Sputtering	244
13.3	Hysteresis Effect in DC Reactive Sputtering	244
13.4	Methods to Overcome Hysteresis	246
13.4.1	Increasing the Pumping Speed	246
13.4.2	Partial Pressure Control of Reactive Gas	247
13.4.3	Cathode Voltage Control	249
13.4.4	Increasing the Target–Substrate Distance	249
13.4.5	Using a Baffle System	250
13.4.6	Pulsed Reactive Gas Flow	250
13.5	Arcing in Reactive Sputter Deposition	251
13.6	Methods to Overcome Arcing Problem	251
13.6.1	Unipolar Pulsed Magnetron Sputtering	252
13.6.2	Bipolar Pulsed Magnetron Sputtering	252
13.6.2.1	Using a Single Magnetron Source	252
13.6.2.2	Using Two Magnetron Sources	253
13.6.3	Elimination of Arcing Using Substoichiometric Targets	254
13.7	Modeling of Reactive Sputtering	254
13.7.1	Steady-State Condition at the Target Surface	254
13.7.2	Steady-State Condition at the Collecting (Substrate) Surface	255
13.8	Implementation of High-Pressure and Reactive Gas Sputtering in Gas Aggregation Sources (GASs)	257
13.8.1	Properties of the Deposited Nanoparticles	259
13.8.2	Influence of Reactive Gas	259

- 13.8.3 Influence of Magnetron Power 263
- 13.8.4 Influence of Process Parameters 263
- 13.8.5 Continuous DC Supply versus Pulsed DC Power Supply 263
- 13.9 Conclusion 264
- Acknowledgment 264
- References 264

Part III In-Flight Post-Growth Manipulation of Nanoparticles 269

- 14 Coating 271**
Panagiotis Grammatikopoulos and Mukhles Sowwan
 - 14.1 Core/Shell Nanoparticles 271
 - 14.2 Fabrication Methods 273
 - 14.3 Structural Modification via In-flight Coating 278
 - 14.4 Summary 282
 - Acknowledgments 282
 - References 283
- 15 Nanostructuring, Orientation, and Annealing 287**
Balamurugan Balasubramanian and David J. Sellmyer
 - 15.1 Introduction and Scope 287
 - 15.2 Control of Crystal Structures 287
 - 15.2.1 Plasma-Condensation-Type Cluster Deposition Method 288
 - 15.2.2 Direct Formation of Magnetic Nanoparticles with High-Anisotropy Structures 289
 - 15.2.3 Postgrowth Annealing 290
 - 15.2.4 Growth of Dielectric Oxide Nanoparticles 291
 - 15.2.5 Orientation/Alignment of Magnetic Nanoparticles 293
 - 15.3 Nanostructuring 294
 - 15.3.1 Dielectric Nanocomposites 295
 - 15.3.2 Cluster-Assembled Exchange-Coupled Nanostructures 296
 - 15.4 Conclusions 298
 - Acknowledgments 299
 - References 299
- 16 Deflection and Mass Filtering 303**
Marcel Di Vece
 - 16.1 Introduction 303
 - 16.2 Magnetic Deflection 305
 - 16.3 The Time-of-Flight Mass Filter 306
 - 16.4 The Reflectron TOF Mass Filter 308
 - 16.5 The Quadrupole Mass Filter 308
 - 16.6 Aerodynamic Lenses 310
 - 16.7 The Wien Filter 312

16.8	Magnetic Sector	312
16.9	Cluster Ion Traps	313
16.10	Matter-Wave Interferometry	313
16.11	Comparison of Mass Filters	314
16.12	Mass Filtering Requirements for Applications	315
16.13	Conclusions	316
	References	317
17	In-Flight and Postdeposition Manipulation of Mass-Filtered Nanoparticles under Soft-Landing Conditions	323
	<i>Joachim Bansmann, Armin Kleibert, Hendrik Bettermann, and Mathias Getzlaff</i>	
17.1	Introduction	323
17.2	In-Flight Manipulation of Cluster Beams	325
17.2.1	Beam Shaping	325
17.2.2	Mass Filtering	325
17.2.3	In-Flight Processing	326
17.3	Soft Landing	327
17.3.1	Contact Formation and Related Phenomena	327
17.3.2	Variation of Kinetic Energies	330
17.3.3	Postdeposition Treatment	331
17.4	Summary	333
	Acknowledgments	334
	References	334
18	In-Flight Analysis	339
	<i>Sergio D'Addato</i>	
18.1	Introduction	339
18.2	Electron Diffraction and X-ray Scattering Analysis of Clusters and Nanoparticles	340
18.3	Photoelectron and X-ray Absorption Spectroscopy	345
18.4	Magnetic Deflection Experiments	350
18.5	X-ray Magnetic Circular Dichroism Experiments	355
18.6	Conclusions	358
	References	358

Part IV Perspectives 365

19	Nano- and Micromanufacturing with Nanoparticles Produced in the Gas Phase: An Emerging Tool for Functional and Length-Scale Integration	367
	<i>Paolo Milani and Luca G. Bettini</i>	
19.1	Introduction	367
19.2	Site-Selected Nanoparticle Deposition	369
19.3	Supersonic Cluster Beam Deposition	370

19.4	System Integration Approach by SCBD	375
19.4.1	Gas Microsensors	375
19.4.2	Biosensors	377
19.4.3	Electrochemical Devices	378
19.5	Conclusions	380
	References	380
