

Contents

Preface — V

1 Introduction and overview — 1

- 1.1 Basic terminology — 1
 - 1.1.1 Historical development of the motor vehicle — 1
 - 1.1.2 Definition of the term motor vehicle — 2
 - 1.1.3 Life cycle of a vehicle — 3
 - 1.1.4 Motor vehicles as part of the energy chain — 4
 - 1.1.5 Vehicle categories and segments — 6
 - 1.1.6 Vehicle types according to drive type — 6
 - 1.1.7 Registration and production figures — 7
- 1.2 Configuration of a vehicle — 9
 - 1.2.1 Vehicle assembly groups and component configuration — 10
 - 1.2.2 Important dimensions and vehicle packaging — 13
 - 1.2.3 The vehicle as part of the transport system — 14
- 1.3 Product and technology development process in the automotive industry — 15
 - 1.3.1 Product development process — 15
 - 1.3.2 The mechatronic V-model — 18
 - 1.3.3 Automotive industry's share of technical innovation — 21
- 1.4 Norms and conventions — 22
 - 1.4.1 Functional safety (ISO 26262) — 23
 - 1.4.2 Safety of the intended functionality (SOTIF) — 25
 - 1.4.3 Cyber security — 26
- 1.5 Development of selected parameters — 26
- 1.6 Potentials for future development covered in this book edition — 29

2 Wheels and tires — 31

- 2.1 Tire structure — 31
 - 2.1.1 Structure of the radial tire — 31
 - 2.1.2 Avoidance of punctures and tires with emergency running properties — 34
 - 2.1.3 Comments on the manufacturing process of a tire — 34
 - 2.1.4 Tire labeling — 35
- 2.2 Basic tire characteristics — 36
 - 2.2.1 Visco-elastic behavior — 37
 - 2.2.2 Rubber friction — 38
 - 2.2.3 Rolling resistance — 41
 - 2.2.4 Transmission of vertical forces — 43
 - 2.2.5 Influence of tire inflation pressure on tire properties — 44

2.2.6	Influence of temperature on tire properties —	48
2.2.7	Conflicting goals of tire development —	49
2.3	Mathematical description of tire forces —	50
2.3.1	Classification of tire forces —	50
2.3.2	Tires under the influence of vertical forces —	51
2.3.3	Tires under the influence of longitudinal and lateral forces —	52
2.3.4	Impact of the tire's normal forces —	60
2.3.5	Influence of the camber on the lateral tire force —	61
2.3.6	Mathematical tire models —	62
2.3.7	Superposition of horizontal forces —	64
2.3.8	Instationary tire forces —	67
2.3.9	Dynamics of the braked and driven wheel —	68
2.4	Monitoring of the tire pressure —	70
2.4.1	Direct tire pressure monitoring —	71
2.4.2	Indirect tire pressure monitoring —	74
2.5	Fine dust pollution due to tire-road abrasion —	77
3	Vehicle dynamics and suspension systems —	80
3.1	General definitions of vehicle motion —	80
3.2	Coordinate systems —	82
3.3	Structure and components of the chassis —	83
3.4	Axle kinematic properties —	85
3.4.1	Toe-in angle —	86
3.4.2	Camber angle —	88
3.4.3	Steering axis —	88
3.5	Fundamentals of vehicle dynamics —	91
3.5.1	Description of the planar vehicle dynamics using the linear single-track model —	91
3.5.2	Equations of motion of the linear single-track model —	92
3.5.3	Steady-state steering behavior and circular drive —	98
3.5.4	Transient steering behavior and driving stability —	102
3.5.5	Influence of vehicle body roll —	103
3.5.6	Quasi-static calculation of dynamic wheel loads —	108
3.5.7	Effect of wheel loads on cornering behavior —	110
3.6	Description of fundamental properties of dynamics in the general case —	112
3.6.1	Steady-state driving behavior —	114
3.6.2	Transient driving behavior —	119
3.7	Driving maneuvers —	123
3.7.1	Maneuver steady-state circular drive —	126
3.7.2	Frequency response —	126
3.7.3	Step-steer input —	127

3.7.4	Double lane change —	128
3.8	Chassis control systems overview —	129
3.8.1	All wheel drive (AWD) —	129
3.8.2	Torque vectoring (TV) —	130
3.8.3	Rear wheel steering (RWS) —	131
3.8.4	Active roll stabilization (ARS) —	132
3.8.5	Adaptive air suspension (AS) —	132
3.8.6	Semi-active dampers (SAD) —	133
3.8.7	Active damper (AD) —	134
3.9	Chassis systems and suspensions —	135
3.9.1	Overview of the characteristics of wheel suspensions —	135
3.9.2	MacPherson spring strut axle suspension —	136
3.9.3	Multi-link wheel suspension —	138
3.9.4	Examination of the wheel suspension motion —	140
3.10	Vertical dynamics —	144
3.10.1	Vertical dynamics requirements of the suspension system —	145
3.10.2	Roadway excitation —	146
3.10.3	Wheel vertical dynamics —	148
3.10.4	Body springs —	149
3.10.5	Body damper —	154
3.10.6	Stabilizers —	155
3.10.7	Description of vertical dynamics —	157
3.10.8	Objectification of vibration comfort —	160
3.10.9	Oscillation frequency of wheel, seat, and body —	163

4 Vehicle steering — 165

4.1	Requirements of vehicle steering systems —	166
4.2	Driver-vehicle Interaction and steering feel —	166
4.2.1	Basic requirements for steering systems —	166
4.2.2	Assessment criteria for steering systems —	169
4.2.3	Subject study and press analysis —	169
4.2.4	Results of the press analysis on steering systems —	171
4.3	Common designs of steering systems —	172
4.4	Steering kinematics —	174
4.4.1	Ackermann steering kinematics —	174
4.4.2	Dynamic approach to steering kinematics —	176
4.5	Components of the steering system —	178
4.5.1	Steering wheel —	179
4.5.2	Steering column and intermediate steering shaft —	179
4.5.3	Steering rack —	181
4.6	Parameters of the steered wheels —	183
4.6.1	Definition of geometric parameters of the wheel —	183

4.6.2	Changes in geometric parameters during cornering —	184
4.7	Steering transmission —	187
4.7.1	Ratio of the steering gear —	188
4.7.2	Ratio of the steering linkages —	188
4.8	Steering torques for conventional steering systems —	193
4.8.1	Steering rack forces —	193
4.8.2	Drilling torque —	194
4.8.3	Drilling torque during stationary steering —	195
4.8.4	Steering rack forces for large steering angles —	196
4.8.5	Steering rack force during parking —	197
4.9	Simplified model of rack and pinion steering —	197
4.10	Power steering assistance systems —	202
4.10.1	Hydraulic power steering —	202
4.10.2	Electro-hydraulic power steering —	203
4.10.3	Electro-mechanical power steering —	205
4.11	Use of test benches for the development of steering systems —	214
4.11.1	Example: test bench for electromechanical steering systems —	215
4.12	Innovative approaches to vehicle steering —	218
4.12.1	Superimposed steering —	218
4.12.2	All-wheel steering —	219
4.12.3	Steer-by-Wire —	220
5	Braking systems —	222
5.1	Basic structure of the braking system —	222
5.2	Different implementations of braking systems —	223
5.2.1	Design types —	223
5.2.2	Functionality —	224
5.2.3	Ideal brake force distribution —	226
5.2.4	Failure of a brake circuit —	230
5.3	Assembly components of the braking system —	231
5.3.1	Overview and functionality —	231
5.3.2	Brake pedal and master brake cylinder —	236
5.3.3	Brake booster —	237
5.3.4	Drum brakes —	241
5.3.5	Disc brakes —	242
5.3.6	Brake discs —	243
5.3.7	Brake pads —	244
5.3.8	Thermal behavior of brakes —	244
5.4	Brake circuit layout —	245
5.5	Braking process —	246
5.5.1	Reaction-and response times —	246
5.5.2	Braking distances —	247

5.6	Servo brakes —	249
5.6.1	Electro-Hydraulic brakes (EHB) —	249
5.6.2	Electro-mechanical brakes (EMB) and brake-by-wire —	250
5.7	Potentials through electrified powertrains —	251
5.8	Fine dust pollution from brake abrasion —	253
6	Propulsion systems —	255
6.1	Types of drivetrains —	255
6.2	Propulsion requirements for motorized vehicles —	257
6.2.1	Driving resistance —	259
6.2.2	Rolling resistance —	261
6.2.3	Air resistance (drag) —	263
6.2.4	Gravitational resistance (inclines) —	263
6.2.5	Inertial resistance —	264
6.2.6	The traction force equation —	265
6.2.7	Ideal drive- and output mapping —	268
6.3	Tangential force transfer by tire-road contact —	269
6.4	Power sources —	271
6.4.1	Internal combustion engines —	272
6.5	Transmissions and shafts —	302
6.5.1	Gears —	302
6.5.2	Power losses in the drivetrain —	303
6.6	Battery electric vehicles (BEVs) —	305
6.6.1	Basic topology of the powertrain —	305
6.6.2	Powertrain structure and components —	306
6.6.3	Examples of battery electric vehicles —	307
6.7	Energy consumption —	307
6.7.1	Determining energy consumption —	309
6.7.2	Willans curves —	309
6.7.3	Identification of different driving states —	311
6.7.4	Driving cycles —	311
6.8	Auxiliary consumers —	319
6.9	Recuperation and one-pedal driving —	320
6.9.1	Recuperation —	320
6.9.2	One-pedal driving —	321
6.10	Energy sources and storage —	321
6.10.1	Fossil fuels —	322
6.10.2	Alternative fuels —	325
6.10.3	Electrical energy storage —	325
6.10.4	Fuel cells —	337
6.10.5	Thermal management —	338
6.11	Recharging of electric vehicles —	339

- 6.11.1 C-rate — **339**
- 6.11.2 Charging modes — **340**
- 6.11.3 contactless inductive charging — **342**

7 Vehicle safety — 343

- 7.1 Areas of vehicle safety — **344**
 - 7.1.1 Definitions — **344**
 - 7.1.2 Systems of active safety — **345**
 - 7.1.3 Systems of passive safety — **346**
 - 7.1.4 Legal rules and regulations — **349**
- 7.2 The role of the vehicle structure — **351**
 - 7.2.1 Example frontal crash — **355**
 - 7.2.2 AZT/RCAR test — **356**
 - 7.2.3 FF (full-frontal) — **356**
 - 7.2.4 ODB (offset deformable barrier) — **356**
- 7.3 Basic course of a frontal collision — **356**
 - 7.3.1 Physical considerations concerning the frontal crash — **357**
 - 7.3.2 Parameters for accident severity — **359**
- 7.4 Restraint systems — **360**
 - 7.4.1 Seat belts and pretensioners — **360**
 - 7.4.2 Airbag systems — **363**
 - 7.4.3 Trigger sensors and algorithms — **367**
- 7.5 Passenger detection — **370**
- 7.6 Vehicle roll-over — **371**
 - 7.6.1 Physical considerations concerning the tipping of vehicles — **373**

8 Automotive electrical system — 376

- 8.1 History of automotive power nets — **378**
- 8.2 Energy power net — **381**
 - 8.2.1 Structure and mode of operation of today's power nets — **381**
 - 8.2.2 The classic 12 V electrical power net — **385**
 - 8.2.3 The 42 V electrical power net — **387**
 - 8.2.4 The 48 V electrical power net — **388**
 - 8.2.5 Electrical power nets in electromobility — **390**
 - 8.2.6 Redundant power net topology — **391**
- 8.3 Energy storage — **393**
 - 8.3.1 Starter batteries — **394**
 - 8.3.2 Characteristics and guidelines for lead-acid batteries — **396**
- 8.4 Modeling of the battery behavior — **401**
- 8.5 Alternators in motor vehicles — **406**
 - 8.5.1 Design of vehicle alternators — **408**
 - 8.5.2 Efficiencies of vehicle alternators — **408**

8.6	Simplified model of a vehicle alternator —	409
8.6.1	Electrical machine —	411
8.6.2	Rectifier —	413
8.6.3	Voltage regulators —	414
8.6.4	Alternator load torque —	415
8.7	DC/DC converter —	416
8.8	Electrical consumers of the power net —	417
8.9	Wiring harness —	418
8.10	Overload protection —	420
8.11	Approaches for an energy management —	422
8.12	Electrical signal transmission —	424
8.12.1	Architecture of information networks —	425
8.12.2	Overview of bus systems in motor vehicles —	428
8.12.3	Fundamental terms —	429
8.12.4	Analog signal transmission —	430
8.12.5	Bus topologies —	430
8.12.6	Structure of a bus system —	432
8.12.7	Bus protocol —	433
8.12.8	Data frame —	436
8.12.9	Bit stream —	440
8.12.10	Bus media – physical layer —	440
8.12.11	Examples of bus systems in motor vehicles other than CAN —	442
9	Driving dynamic control systems and driver assistance systems —	446
9.1	Basic terms —	446
9.1.1	Levels of vehicle guidance —	446
9.1.2	Levels of automation —	447
9.1.3	Operational design domain (ODD) —	450
9.1.4	Levels of cooperation —	452
9.1.5	Technical equipment of driver assistance systems —	452
9.2	Driving dynamic control systems —	454
9.2.1	Antilock braking system —	455
9.2.2	Traction control system (TCS) —	462
9.2.3	Electronic Stability Program (ESP) —	462
9.3	Automation: functional system architecture —	465
9.4	Sense: environment and localization —	467
9.4.1	Recording the environment —	467
9.4.2	Localization —	472
9.5	Plan: movement planning – maneuvers and trajectories —	475
9.5.1	Heuristic planning procedures —	475
9.5.2	Combinatorial planning methods —	476
9.5.3	Sample-based planning methods —	477

9.5.4	Motion planning of an automated vehicle —	478
9.5.5	ADORE (Automated Driving Open Research) —	480
9.6	Networking —	480
9.6.1	Cooperative intelligent transport systems —	481
9.6.2	C-ITS communication model and technologies —	482
9.6.3	Standardization and participating organizations —	486
9.6.4	Important V2X services and message types —	488
9.7	Examples of current driver assistance systems —	492
9.7.1	Adaptive cruise control (ACC) —	493
9.7.2	Lane keeping assistance —	501
9.7.3	Lane change assistance —	504
9.7.4	Pedestrian assistance —	504
9.7.5	Parking assistance —	508
9.8	Teleoperation —	511
9.9	Novel vehicle concepts —	516
10	Driving simulators —	519
10.1	Basic requirements for driving simulators —	520
10.2	Classification and basic structure of driving simulators —	522
10.2.1	Simulation —	523
10.2.2	Driver workstation —	524
10.2.3	Environment representation —	525
10.2.4	The motion system —	526
10.3	Simulator test —	527
10.3.1	Reasons for the use of simulations —	528
10.3.2	Experimental design and implementation —	529
10.4	Exemplary implementation of a driving simulator —	530
10.4.1	Desk simulators —	531
10.4.2	Simulator with cockpit —	532
10.4.3	Static driving simulator with complete vehicle —	532
10.4.4	Dynamic driving simulator —	533
11	Human factors in the field of driving —	541
11.1	Definition and historical milestones —	541
11.2	Human-machine interaction —	542
11.3	Models in human factors —	548
11.4	Cognitive functions —	550
11.5	Situation awareness —	551
11.6	Mental workload —	554
11.7	Technology acceptance —	556
11.8	Technology trust —	557
11.9	Quantitative measurement methods —	559

11.10	Qualitative measurement methods —	560
11.11	Simulators —	562
11.12	Summary —	564

Literature —	567
