Preface *ix*

Part I An Overview of Noble Gas Chemistry 1

1	A Historical Introduction	3
1.1	The Discovery of the Elements	3
1.2	The Emerging of Different Chemistries	7
1.2.1	Bulk-Phase Compounds	8
1.2.2	Molecules in Cold Matrices	11
1.2.3	Molecules in Liquid and Supercritical Noble Gases	12
1.2.4	Chemistry Under High Pressures	13
1.2.5	Gaseous Neutral Complexes	14
1.2.6	Gas-Phase Ion Chemistry	16
1.3	The Development of the Diverse Fields	18
2	Typical Compounds and Bonding Motifs	23
2.1	General Considerations	23
2.2	Clusters of Noble Gas Atoms	26
2.3	Monocoordinated Compounds	29
2.4	Dicoordinated ('Inserted') Compounds	30
2.5	Polycoordinated Compounds	41
2.6	Cage, Inclusion, and Adsorption Compounds	47
2.7	The Effects of the Pressure	51
3	Chemistry <i>in Silico</i>	55
3.1	The Role of Calculations in Noble Gas Chemistry	55
3.2	Methods of Bonding Analysis	56
3.2.1	The AIM Theory	56
3.2.2	The Analysis of the ELF	57
3.2.3	The Analysis of the $H(r)$	58
3.2.4	The NBO Analysis	62
3.2.5	The EDA-NOCV Analysis	64
3.2.6	The Analysis of the CD Function	66

3.3	About the Performance of the Theoretical Methods	66
3.4	Illustrative Examples	70
3.4.1	Probing the Bonding Character	70
3.4.2	Structure and Stability of the XeF_n ($n = 1 - 6$)	84
3.4.3	Open-shell Compounds	88
3.4.4	Exploring the PES	91
3.4.5	Neutral Compounds of Helium and Neon	99
3.4.6	Novel Compounds of Argon, Krypton, and Xenon	123
3.4.7	Radon Compounds	133
3.4.8	The Aerogen Bond	138

Part II Gas-Phase Chemistry of the Noble Gases 147

4 Neutral Species 149

4.1	Complexes with Atoms and Diatomic Molecules	149
4.1.1	The Interaction Energy	149
4.1.2	The Correlation Formulas	150
4.1.3	The Ng_2 and NgNg'	154
4.1.4	About the van der Waals Radii of the Noble Gases	157
4.1.5	The Efimov State of He_3	159
4.1.6	Complexes with H_2 , N_2 , and O_2	160
4.1.7	Complexes with C_2 , CO , and CS	162
4.1.8	Complexes with the Dihalogens	166
4.1.9	Complexes with the Hydrogen Halides	173
4.1.10	Complexes with Diatomic Metal Halides	178
4.2	Complexes with Polyatomic Molecules	183
4.2.1	Complexes with CO_2 , CS_2 , and COS	183
4.2.2	Complexes with H_2O and NH_3	186
4.2.3	Complexes with Hydrocarbons	191
4.2.4	Complexes with Halocarbons	194
4.2.5	Complexes with Other Organic Molecules	197
4.3	Dicoordinated Covalent Compounds	200

5 Ionic Species 203

5.1	Noble Gases as Ligands of Ionic Species	205
5.1.1	Complexes with Metal Cations	205
5.1.2	Complexes with Non-Metal Cations	220
5.1.3	Complexes with Anions	227
5.2	Protonated Noble Gases and Other Related Species	229
5.2.1	ArH^+ as a Naturally Occurring Species	229
5.2.2	The NgH^+ and Ng_mH_n^+	231
5.2.3	Complexes of the NgH^+ with Simple Ligands	241
5.2.4	Other Noble Gas Ions of Potential Interstellar Interest	244
5.3	Noble Gas Ionic Reactions	249
5.3.1	Reactions Involving Singly-charged Cations	249
5.3.2	Reactions Involving Doubly-charged Cations	253

A	Chemical Composition of Air	259
B	<i>Ab Initio</i> and DFT Electronic Structure Methods	261
C	Atomic Charges of Diatomic Molecules	269
D	Bond Distances and Polarisabilities of Diatomic Molecules	271
	References	273
	Index	337
