Preface *xi*

1	Fundamentals of Ferroelectric Materials	1
	<i>Ling B. Kong, Haitao Huang, and Sean Li</i>	
1.1	Introduction	1
1.2	Piezoelectric Mechanical Energy Harvesting	4
1.2.1	Piezoelectricity	4
1.2.2	Brief History of Modern Piezoelectric Ceramics	6
1.2.3	Principle of Piezoelectric Effect for Mechanical Energy Harvesting	7
1.3	Pyroelectric Thermal Energy Harvesting	10
1.3.1	Principle of Pyroelectric Effect	10
1.3.2	Pyroelectric Coefficient and Electrocaloric Coefficient	12
1.3.3	Primary and Secondary Pyroelectric Coefficient	14
1.3.4	Tertiary Pyroelectric Coefficient and Other Aspects	15
1.3.5	Pyroelectric Effect versus Phase Transition	17
1.4	Electrocaloric (EC) Effect of Ferroelectric Materials	19
1.5	Ferroelectric Photovoltaic Solar Energy Harvesting	23
1.6	Concluding Remarks	27
	References	28
2	Piezoelectric Energy Generation	33
	<i>Hong G. Yeo and Susan Trolier-McKinstry</i>	
2.1	Kinetic Energy Harvesting	33
2.1.1	Theory of Kinetic Energy Harvesting	33
2.1.2	Kinetic Vibration Source in the Ambient	35
2.1.3	Transducers for Mechanical Energy Harvesting	36
2.2	Piezoelectric Vibration Harvesting	39
2.2.1	Piezoelectricity	39
2.2.2	Theory of Piezoelectric Vibration Energy Harvesting	40
2.3	Choice of Materials for Energy Harvesting	43
2.3.1	Materials for Piezoelectric MEMS Harvesting	43
2.3.2	Effect of Stress Induced by Substrate	45
2.4	Design and Configuration of Piezoelectric Harvester	47
2.4.1	Option of Piezoelectric Configuration	47

2.4.2	Unimorph and Bimorph Structures	48
2.4.3	Linear Piezoelectric Energy Harvesters	49
2.4.4	Nonlinear Energy Harvesting	49
2.5	Review of Piezoelectric Thin Films on Metal Substrate (Foil)	52
2.6	Conclusions	53
	References	53
3	Ferroelectric Photovoltaics	61
	<i>Akash Bhatnagar</i>	
3.1	Introduction	61
3.2	Historical Background	62
3.2.1	Recent Studies	68
3.3	Modulation of the Effect	74
3.3.1	Polarization	74
3.3.2	Electrodes	77
3.3.3	Band Gap Engineering	79
3.3.4	Photo-mechanical Coupling	84
3.4	Summary and Outlook	88
	References	89
4	Organic–Inorganic Hybrid Perovskites for Solar Energy Conversion	95
	<i>Peng You and Feng Yan</i>	
4.1	Introduction	95
4.2	Fundamental Properties of Hybrid Perovskites	96
4.2.1	Crystal Structures	96
4.2.2	Optical Properties	97
4.2.3	Charge Transport Properties	98
4.2.4	Compositional Engineering and Bandgap Tuning	98
4.3	Synthesis of Hybrid Perovskite Crystals	99
4.3.1	Bulk Crystal Growth	99
4.3.2	Nanocrystal Synthesis	100
4.4	Deposition Methods of Perovskite Films	101
4.4.1	One-Step Solution Process	101
4.4.2	Two-Step Solution Process	102
4.4.3	Vapor-Phase Deposition	103
4.5	Efficiency Roadmap of Perovskite Solar Cells	103
4.6	Working Mechanism and Device Architectures of Perovskite Solar Cells	106
4.7	Key Challenges of Perovskite Solar Cells	108
4.7.1	Long-Term Stability	108
4.7.2	<i>I–V</i> Hysteresis	110
4.7.3	Toxicity of Raw Materials	111
4.8	Summary and Perspectives	111
	References	112

5	Dielectric Ceramics and Films for Electrical Energy Storage	119
	<i>Xihong Hao</i>	
5.1	Introduction	119
5.2	Principles of Dielectric Capacitors for Electrical Energy Storage	120
5.2.1	The Basic Knowledge on Capacitors	120
5.2.2	Some Important Parameters for Electrical Energy Storage	122
5.2.2.1	Energy-Storage Density	122
5.2.2.2	Energy Efficiency	122
5.2.2.3	Breakdown Strength (BDS)	123
5.2.2.4	Thermal Stability	124
5.2.2.5	Power Density	125
5.2.2.6	Service Life	125
5.2.3	Measurement Techniques of Energy Density	125
5.2.3.1	Polarization-Based Method	125
5.2.3.2	Indirect Calculated Method	127
5.2.3.3	Direct Charge–Discharge Method	127
5.3	The Energy-Storage Performance in Paraelectric-Like Metal Oxides	129
5.3.1	Simple Metal Oxides	129
5.3.1.1	TiO ₂	129
5.3.1.2	ZrO ₂	130
5.3.1.3	Al ₂ O ₃	130
5.3.2	Multi-metal Oxides	130
5.3.2.1	SrTiO ₃	131
5.3.2.2	Bi _{1.5} Zn _{0.9} Nb _{1.5} O _{6.9}	131
5.4	The Energy-Storage Performance in Antiferroelectrics	131
5.4.1	PbZrO ₃ -Based Antiferroelectric	132
5.4.2	(Na _{0.5} Bi _{0.5})TiO ₃ -Based Antiferroelectric	140
5.4.3	AgNbO ₃ -Based Antiferroelectric	143
5.4.4	HfO ₂ -Based Antiferroelectric	143
5.5	Energy-Storage Performance in Glass-Ceramic Ferroelectrics	144
5.5.1	Glass-Ceramic Ferroelectrics Prepared by Compositing Method	145
5.5.2	Glass-ceramic Prepared by Body-crystallization Method	146
5.5.2.1	Lead-Containing Glass-ceramic	146
5.5.2.2	BaTiO ₃ -Based Glass-ceramic	146
5.5.2.3	Nb-Containing Glass-ceramic	147
5.5.3	Interface Effect-Related Energy-Storage Performance	148
5.6	Energy-Storage Performance in Relaxor Ferroelectrics	151
5.6.1	PLZT Relaxor Ferroelectrics	152
5.6.2	BaTiO ₃ -Based Relaxor Ferroelectrics	154
5.6.3	PbTiO ₃ -Based Relaxor Ferroelectrics	157
5.6.4	BiFeO ₃ -Based Relaxor Ferroelectrics	157
5.7	The General Future Prospects	158
	References	159

6	Ferroelectric Polymer Materials for Electric Energy Storage	169
	<i>Zhi-Min Dang, Ming-Sheng Zheng, and Jun-Wei Zha</i>	
6.1	Introduction	169
6.2	Energy Storage Theory	170
6.3	Energy Storage of Ferroelectric Polymers	172
6.4	Energy Storage of Ferroelectric Polymer-Based Nanocomposites	175
6.4.1	Ferroelectric Polymer-Based Nanocomposites Using 0D Nanofillers	177
6.4.1.1	Surface-Modified 0D Nanofillers	177
6.4.1.2	Core–Shell Structure 0D Nanofillers	181
6.4.1.3	Multilevel Structure Nanocomposites	183
6.4.2	Ferroelectric Polymer-Based Nanocomposites Using 1D Nanofillers	184
6.4.2.1	Surface-Modified 1D Nanofillers	184
6.4.2.2	Core–Shell Structure 1D Nanofillers	189
6.4.2.3	Multilevel Structure Nanocomposites	189
6.4.3	Ferroelectric Polymer-Based Nanocomposites Using 2D Nanofillers	190
6.5	Summary	193
	References	193
7	Pyroelectric Energy Harvesting: Materials and Applications	203
	<i>Chris R. Bowen, Mengying Xie, Yan Zhang, Vitaly Yu. Topolov, and Chaoying Wan</i>	
7.1	Introduction to Pyroelectric Energy Harvesting	203
7.2	Nanostructured and Microscale Materials and Devices	205
7.3	Hybrid Pyroelectric Generators	207
7.3.1	Hybrid Piezoelectric and Pyroelectric System	207
7.3.2	Hybrid Pyroelectric and Solar Systems	209
7.4	Pyroelectric Oscillator Systems	210
7.5	Pyroelectric Coupling with Electrochemical Systems	212
7.6	Porous Pyroelectric Materials	212
7.6.1	Manufacture of Isotropic Porous Pyroelectric Materials	214
7.6.1.1	Lost Wax Replication of a Coral Skeleton (Positive Template)	214
7.6.1.2	Polymeric Sponge (Positive Template)	214
7.6.1.3	Burned Out Plastic Spheres (BURPS) (Negative Template)	215
7.6.1.4	Direct Pore Forming	215
7.6.1.5	Gel Casting	215
7.6.2	Manufacture of Anisotropic Porous Pyroelectric Materials	216
7.6.2.1	Freeze Casting	216
7.6.2.2	3D Rapid Prototyping	218
7.7	Figures of Merit and Applications Concerned with Radiations	219
7.8	Conclusions	221
	Acknowledgments	222
	References	222

8	Ferroelectrics in Electrocaloric Cooling	231
	<i>Biaolin Peng and Qi Zhang</i>	
8.1	Fundamentals of Electrocaloric Effects	231
8.1.1	Maxwell Relations and Coupled Electrocaloric Effects	231
8.1.2	Electrocaloric Effect Derived from the Landau–Devonshire Phenomenological Theory	235
8.1.3	Physical Upper Bounds on the Electrocaloric Effect Derived from the Statistical Thermodynamics Theory	236
8.1.4	ECE Measurement Methods	238
8.1.5	Positive and Negative Electrocaloric Effects	238
8.2	Electrocaloric Devices	242
8.2.1	Electrocaloric Refrigerator Prototype	242
8.2.2	MLCC and MLPC EC Refrigerator Modules	244
8.3	Electrocaloric Materials	245
8.3.1	EC in Ferroelectric Ceramics	245
8.3.1.1	In Bulk Ceramics and Single Crystals	245
8.3.1.2	In Thin Films	248
8.3.2	EC in Ferroelectric Polymer Materials	250
8.3.2.1	In Normal Ferroelectric Polymers	251
8.3.2.2	In Relaxor Ferroelectric Terpolymers	253
8.3.3	EC in Other Materials	254
8.3.3.1	In Composites	254
8.3.3.2	In Liquid Crystals	257
8.3.3.3	In Fast Ion Conductors	259
8.4	Summary and Outlook	260
	References	262
9	Ferroelectrics in Photocatalysis	265
	<i>Liang Fang, Lu You, and Jun-Ming Liu</i>	
9.1	Introduction	265
9.2	Fundamental Principles of Semiconductor Photocatalysis	266
9.3	Advances in Understanding Ferroelectric Photocatalytic Mechanisms	269
9.4	Photochemistry of Ferroelectric Materials	271
9.5	Photocatalytic Degradation Using Ferroelectric Materials	280
9.6	Photocatalytic Water-splitting Using Ferroelectric Materials	289
9.7	Conclusion and Perspectives	297
9.7.1	Light Absorption	299
9.7.2	Carrier Separation and Transport	300
9.7.3	Carrier Collection/Reaction	301
	Acknowledgments	301
	References	301
10	First-Principles Calculations on Ferroelectrics for Energy Applications	311
	<i>Gelei Jiang, Weijin Chen, and Yue Zheng</i>	
10.1	Introduction	311

10.2	Methods	312
10.2.1	First-Principles Calculations	312
10.2.2	First-Principles-Derived Effective Hamiltonian Method	312
10.3	Energy Conversion	313
10.3.1	Piezoelectric and Flexoelectric Effect	313
10.3.2	Photovoltaic Effect	322
10.3.3	Pyroelectric and Electrocaloric Effect	327
10.4	Energy Storage	331
	References	337
11	Future Perspectives	349
	<i>Haitao Huang</i>	
11.1	Enhanced Lithium Ion Transport in Polymer Electrolyte	350
11.2	Enhanced Polysulfide Trapping in Li–S Batteries	351
11.3	Enhanced Dissociation of Excitons	352
11.4	New Materials	354
11.5	New Applications	357
	References	359
	Index	363
