

# Inhaltsverzeichnis

## **H<sub>2</sub> Engine Hybrid Powertrain for Future Light Commercial Vehicles**

Jan Niklas Geiler, Klaus Moritz Springer, Thomas Lorenz,  
Michael Blomberg, Jens Achenbach und Peter Bloch

## **Driving Hydrogen Engines towards a Zero-Impact Emission Level**

Sebastian Roiser, Stefan Beringer, Eberhard Schutting, Helmut Eichlseder,  
Tobias Rabe, Ilona Krinn und Katja Adelman

## **Commercial engine concepts for the flexible use of low-carbon and sustainable fuels**

Anton Arnberger, Andreas Zurk, Janos Szabo, Martin Wieser  
und Bernhard Raser

## **Liebherr's fuel injection portfolio strategy for future fuels**

Richard Pirkl, Seba Bouzid, Dennis Herrmann und Patrick Send

## **Strategies for a CO<sub>2</sub>-optimal propulsion mix – life cycle analysis based on the FVV Fuels Studies IV and IV b**

Ulrich Kramer und David Bothe

## **Electrification Strategy for China**

Ingo Scholten, Zhao Fucheng und Philip Newman

## **Biofuels as a strategy for CO<sub>2</sub>e-Reduction in Brazil**

Roger Guilherme, Thomas Garbe, Felipe Cifoni und Thomas Kersten

## **Influence of hydrogen combustion on engine components in full load operation**

Christian Trabold, Alexander Puck, Tino Gallas, Peter Grabner  
und Kevin Gschiel

## **Tribological challenges of the cylinder bore in H<sub>2</sub> ICEs**

Hans-Peter Böhm, Sebastian Duda, Christian Maisch, Urban Morawitz  
und Daniel Schulz

## **Resistant Cast Iron for a 50% Efficient Hydrogen Engine**

André Ferrarese, Elio Augusto Kumoto, Ralf Marquard, Martin Wieser,  
Christian Traxler, Ulf Lundqvist, David Mumford und Jake Walker

**Direct Air Capture – CO<sub>2</sub> from ambient air as a raw material for defossilized products**

Marc Rüggeberg, Michael Frambourg, Andreas Grote, Peter Kawelke und Christine Schütz

**Potential analysis of a variable valve train system in the scope of synthetic fuel**

Friedemar Knost, Philipp Demel, Alexander Mokros und Christian Beidl

**On-Board Monitoring (OBM) for EU7 – Challenges and possible approaches**

Peter Götschl und Kurt Klumaier

**LNT as an effective solution to minimize NO<sub>x</sub> emissions of hydrogen combustion engines**

Simon Bruckmeier, Daniel Thomas Koch und Bárbara Diesel Costa

**Benefits of a Driven-Turbo for Hydrogen Internal Combustion Engines**

T. Waldroni, J. Brin, H. Seitz und W. Hochegger

**Simulation Study on Laminar Flame Speed of Ammonia-Hydrogen Blends Using Artificial Neural Networks**

Tingting Li, Khashayar Ebrahimi, Kai Gaukel, Kevin Roggendorf und Navin Fogla

**Towards the Optimization of the Piston Design for a Premixed Ammonia Combustion Engine with a CFD Modelling Approach**

Virginie Morel, Hyun Woo Won, Deepak Kumar, Maxime Tarot, Christine Mounaïm-Rousselle, Pierre Bréquigny, Jean Bouriot und Sebastien Houille

**With e-fuels to affordable CO<sub>2</sub>-neutral mobility**

Elmar Kühn

**A Study on the Fuel-Saving Potential of a Multi-Criteria Speed Trajectory Planning for HEV**

Dominic Waldenmayer, Johannes Buyer, Katharina Bause, Patrick Mößner, Florian Schnepf, Hermann Koch-Gröber und Albert Albers

**Hydrogen engine for buses – a highly competitive CO<sub>2</sub>-neutral solution which could be quickly implemented**

Nils Monney, Christian Nellen und Laura Amaudruz-Andres

**4×2 tractor with a hydrogen combustion engine – highest performance with lowest emissions**

Andreas Broda, Maximilian Weidner, Dominic Hyna, Florian Lindner, Thomas Malischewski, Daniel Teubner, Jürgen Schmitt und Stephan Schraml

---

**Renewable fuels – What’s next – Outlook, new technologies  
and regulation**

M. Hultman und T. Sarjovaara

**Efficiency Increase for Spark-Ignited Oxygenated Fuels through  
Adaptation of Cylinder Head and Piston**

Christoph Kraus, Patrick Fitz, Martin Härtl und Malte Jaensch

**Investigation into long-term stability of C<sub>1</sub>-oxygenate blends**

Niklas Gebel, Harald Scherer und Ingo Krossing
