Preface *xiii*

1	Controllable Self-Assembly of One-Dimensional Nanocrystals	1
	<i>Shaoyi Zhang, Yang Yang, and Zhihong Nie</i>	
1.1	Introduction	1
1.2	Assembly Strategies	2
1.2.1	Templated Assembly	2
1.2.1.1	Geometrically Patterned Template	2
1.2.1.2	Chemically Patterned Template	4
1.2.2	Field-Driven Assembly	7
1.2.2.1	Assembly under Electric Field	7
1.2.2.2	Magnetic Field	10
1.2.2.3	Flow Field	12
1.2.3	Assembly at Interfaces and Surface	13
1.2.3.1	Liquid–Liquid Interface	14
1.2.3.2	Liquid–Air Interface	15
1.2.3.3	Evaporation-Mediated Assembly on Solid Surface	17
1.2.4	Ligand-Guided Assembly	19
1.2.4.1	Small Molecules	19
1.2.4.2	Polymeric Species	21
1.2.4.3	Biomolecular Ligand	23
1.3	Properties and Applications	25
1.4	Perspectives and Challenges	28
	References	29
2	Self-Assembled Graphene Nanostructures and Their Applications	39
	<i>Dingshan Yu, Zhongke Yuan, Xiaofen Xiao, and Quan Li</i>	
2.1	Introduction	39
2.2	State-of-the-Art Self-Assembly Strategies of Graphene Nanostructures	40
2.2.1	Langmuir–Blodgett (LB) Method	40
2.2.2	Layer-by-Layer (LbL) Assembly Method	42

2.2.3	Flow-, Evaporation-, and Interface-Induced Self-Assembly	43
2.2.4	Template-Directed Self-Assembly and Hydrothermal Processes	45
2.2.5	Spin- and Space-Confinement Self-Assembly	46
2.2.6	Composites with Carbon Nanomaterials	49
2.2.7	Composites with Polymers	51
2.2.8	Composites with Metal or Metal Compounds	53
2.3	Applications of Self-Assembled Graphene Nanostructures	57
2.3.1	Optoelectronics and Photocatalysis	57
2.3.2	Electrochemical Energy Storage	59
2.3.3	Electrocatalysis	60
2.4	Outlook	61
	References	62
3	Photochromic Organic and Hybrid Self-Organized Nanostructured Materials: From Design to Applications	75
	<i>Ling Wang and Quan Li</i>	
3.1	Introduction	75
3.2	Photochromic Organic and Hybrid Nanoparticles	76
3.2.1	Noble Metal Nanoparticles with Photochromic Molecules	77
3.2.2	Fluorescent Nanoparticles with Photochromic Molecules	81
3.2.3	Mesoporous Silica Nanoparticles with Photochromic Molecules	83
3.3	Photochromic Carbon-Based Nanomaterials	87
3.3.1	Carbon Nanotubes with Photochromic Molecules	87
3.3.2	Graphene Derivatives with Photochromic Molecules	90
3.4	Photochromic Chiral Liquid-Crystalline Nanostructured Materials	91
3.4.1	Cholesteric Liquid-Crystalline Superstructures	93
3.4.2	Liquid-Crystalline Blue Phase Superstructures	97
3.4.3	Liquid-Crystalline Microshells and Microdroplets	98
3.5	Summary and Perspective	100
	Acknowledgments	101
	References	101
4	Photoresponsive Host–Guest Nanostructured Supramolecular Systems	113
	<i>Da-Hui Qu, Wen-Zhi Wang, and He Tian</i>	
4.1	Introduction	113
4.2	Photoresponsive Supramolecular Polymers and Their Assemblies	114
4.2.1	Supramolecular Interactions in the Main Chain	115
4.2.2	Supramolecular Interactions in the Side Chain	133
4.2.3	Supramolecular Complexations as Cross-Linkers between Branched Polymer Chains	139
4.2.4	Photoresponsive Supramolecular Micelles, Vesicles, and Other Assemblies	140
4.3	Photoresponsive Host–Guest Systems Immobilized on Surfaces	148
4.4	Conclusions and Prospects	157

Acknowledgments 157

Abbreviations 157

References 158

5 π -Electronic Ion-Pairing Assemblies Providing Nanostructured Materials 165

Yohei Haketa and Hiromitsu Maeda

5.1 Introduction 165

5.2 Nanostructures Based on Self-Assembling π -Electronic Charged Species 167

5.2.1 Formation of Nanofibers 167

5.2.2 Formation of Nanotubes and Others 172

5.3 Ionic Liquid Crystals Based on π -Electronic Charged Species 175

5.4 Assemblies Based on Genuine π -Electronic Ions 177

5.5 Ion-Pairing Assemblies Based on π -Electronic Anion-Responsive Molecules 184

5.5.1 Solid-State Assemblies Based on π -Electronic Anion-Responsive Molecules 184

5.5.2 Solid-State Assemblies of Receptor–Anion Complexes 186

5.5.3 Ion-Pairing Supramolecular Gels 186

5.5.4 Ion-Pairing Liquid Crystals Based on π -Electronic Charged Species 188

5.6 Conclusion 193

References 194

6 Stimuli-Responsive Nanostructured Surfaces for Biomedical Applications 203

Bárbara Santos Gomes and Paula M. Mendes

6.1 Introduction 203

6.2 Thin-Film Formation by Assembly on Surfaces 204

6.3 Lithographic Techniques 206

6.4 Electrically Driven Nanostructured Responsive Surfaces 209

6.5 Photodriven Nanostructured Responsive Surfaces 216

6.6 Thermo-Driven Nanostructured Responsive Surfaces 222

6.7 Chemically Controlled Nanostructured Surfaces 227

6.8 Concluding Remarks and Perspectives 234

References 235

7 Stimuli-Directed Self-Organized One-Dimensional Organic Semiconducting Nanostructures for Optoelectronic Applications 247

A.S. Achalkumar, Manoj Mathews, and Quan Li

7.1 Introduction to Discotic Liquid Crystals 247

7.2 Application of Columnar Phases in Organic Electronics 250

7.3 Alignment of Col LC Phases through Different Stimuli 253

7.3.1 Alignment Control by Molecular Design 255

7.3.2	Alignment Control of Columnar Phase through Physical Methods	262
7.3.2.1	Surface Treatment	262
7.3.2.2	Langmuir–Blodgett (LB) Deposition	266
7.3.2.3	Application of Self-Assembled Monolayers	269
7.3.2.4	Application of Chemically Modified Surfaces and Dewetting	273
7.3.2.5	Application of Sacrificial Layer	276
7.3.2.6	Alignment in Nanopores and Nanogrooves	277
7.3.2.7	Zone Casting	281
7.3.2.8	Zone Melting	282
7.3.2.9	Dip Coating, Solvent Vapor Annealing, and Solvent-Induced Precipitation	283
7.3.2.10	Magnetic-Field-Induced Alignment	287
7.3.2.11	Electric-Field-Induced Alignment	288
7.3.2.12	Photoalignment by Infrared Irradiation	290
7.3.2.13	Other Alignment Techniques	291
7.4	Conclusions and Perspective	293
	References	295
8	Stimuli-Directed Helical Axis Switching in Chiral Liquid Crystal Nanostructures	307
	<i>Rafael S. Zola and Quan Li</i>	
8.1	Introduction	307
8.2	Self-Organized Chiral Nematic LCs	308
8.3	Field-Induced Helical Axis Switching: Dielectric/Magnetic Torque and Flexoelectric Effect	311
8.4	Optically Driven Helical Axis Switching	319
8.5	Confinement Mediated Helical Axis Change	328
8.6	Helical Axis Switching in CLC Polymer Composites	339
8.7	Summary and Outlook	345
	References	346
9	Electrically Driven Self-Organized Chiral Liquid-Crystalline Nanostructures: Organic Molecular Photonic Crystal with Tunable Bandgap	359
	<i>Suman K. Manna, Thomas F. George, and Guoqiang Li</i>	
9.1	Introduction	359
9.1.1	Photonic Crystal	359
9.1.2	Photonic Bandgap	359
9.1.3	Light Propagation in 1D Photonic Bandgap Medium	361
9.2	Self-Assembled Photonic Crystals	362
9.2.1	Opal Structure	363
9.2.2	Cholesteric Liquid Crystal	363
9.2.2.1	Liquid Crystal	364
9.2.2.2	Nonchiral Liquid-Crystalline Phase	364
9.2.2.3	Chiral Liquid-Crystalline Phase (Cholesteric)	365
9.3	Electric-Field-Induced, Self-Assembled, Tunable Photonic Crystals	366

9.3.1	Self-Assembled Tunable Opal	367
9.3.2	Electric-Field-Induced, Self-Assembled, Tunable CLC	367
9.3.3	Transverse-Electric-Field-Induced Tunable CLCs	368
9.3.4	Polymer-Stabilized Tunable CLCs	371
9.3.5	Lower Elastic Constant LC Host	373
9.3.6	Negative LC Host	374
9.4	Conclusions	377
	Acknowledgments	378
	References	378
10	Nanostructured Organic–Inorganic Hybrid Membranes for High-Temperature Proton Exchange Membrane Fuel Cells	383
	<i>Jin Zhang and San Ping Jiang</i>	
10.1	Introduction	383
10.2	Nanostructured Nafion-Based Hybrid Membranes	386
10.2.1	Nafion Hybrid Membrane Based on Metal Oxides	387
10.2.1.1	Casting Method	388
10.2.1.2	In situ Sol–Gel Method	391
10.2.1.3	Liquid-Phase Deposition Method	393
10.2.2	Nafion Hybrid Membrane Based on Proton Conductors	394
10.3	Hydrocarbon Polymer-Based Hybrid Membranes	394
10.4	Nanostructured PBI-Based Hybrid Membranes	396
10.4.1	Addition of Non-proton Conductors	398
10.4.2	Conductive Inorganic Fillers	400
10.4.2.1	Functionalization of Inorganic Fillers	400
10.4.2.2	Proton-Conductor-Incorporated Inorganic Fillers	402
10.5	Alternative PA-Doped Hybrid Membranes	404
10.6	Conclusions and Outlook	405
	Acknowledgment	408
	References	408
11	Two-Dimensional Organic and Hybrid Porous Frameworks as Novel Electronic Material Systems: Electronic Properties and Advanced Energy Conversion Functions	419
	<i>Ken Sakaushi</i>	
11.1	Introduction	419
11.2	Electronic Function Control in Two-Dimensional Organic and Hybrid Porous Frameworks	422
11.3	Electronic Functions in 2D Organic Frameworks and Applications	424
11.4	Electronic Functions in Two-Dimensional Hybrid Porous Frameworks and Applications	433
11.5	Concluding Remarks	437
	Acknowledgments	439
	References	439

12	Organic/Inorganic Hybrid Nanostructured Materials for Thermoelectric Energy Conversion	445
	<i>Yucheng Lan, Xiaoming Wang, Chundong Wang, and Mona Zebarjadi</i>	
12.1	Introduction	445
12.1.1	Inorganic Thermoelectric Materials	447
12.1.2	Organic Thermoelectric Materials	449
12.1.3	Hybrid Thermoelectric Nanostructured Composites	453
12.2	Organic/Inorganic Thermoelectric Nanostructured Materials	454
12.2.1	PEDOT Hybrid Nanocomposites	455
12.2.2	PANI Hybrid Nanostructured Composites	458
12.2.3	CNT/Polymer Nanostructured Composites	460
12.2.3.1	CNT/PVAc Composites	461
12.2.3.2	CNT/PANI Nanostructured Composites	462
12.2.3.3	CNT/PEDOT:PSS Nanostructured Composites	464
12.2.3.4	CNT/Bi ₂ Te ₃ Nanostructured Composites	465
12.2.3.5	Three-Component CNT Nanostructured Composites	465
12.2.4	Other Hybrid Nanostructured Composites	467
12.2.4.1	P3OT Hybrid Nanocomposites	467
12.2.4.2	PTH Hybrid Nanocomposites	468
12.2.4.3	PPy Hybrid Nanocomposites	468
12.2.4.4	PC Hybrid Nanocomposites	468
12.2.4.5	PHT Hybrid Nanocomposites	468
12.2.4.6	PPT Hybrid Nanocomposites	468
12.2.4.7	P3HT Hybrid Nanocomposites	468
12.2.4.8	PA Hybrid Nanocomposites	469
12.3	Surface-Transfer Doping of Organic/Inorganic Thermoelectric Nanocomposites	469
12.4	Outlook	472
