

Contents

1. Introduction	1
1.1. Thesis structure	2
1.2. Thesis contribution	3
2. Literature review	5
2.1. Wireless sensor networks	5
2.1.1. Hardware	5
2.1.2. Software	13
2.1.3. Network topologies	16
2.1.4. Network protocols	18
2.1.5. Conclusions	27
2.2. Time synchronization protocols	28
2.2.1. Classes of synchronization	28
2.2.2. Building blocks of synchronization protocols	30
2.2.3. Evaluation of synchronization protocols	35
2.2.4. Synchronization protocols for wireless sensor networks	36
2.2.5. Synchronization protocols in other domains	40
2.2.6. Conclusions	44
2.3. Data Acquisition with wireless sensor networks	44
2.3.1. Data acquisition	45
2.3.2. Time synchronous data acquisition	48
2.3.3. Wireless sensors and smart sensors	49
2.3.4. Conclusions	51
2.4. Synchronous angular sampling	52
2.4.1. Significance and applications	52
2.4.2. Algorithms	54
2.5. Conclusions	56
3. Theoretical foundations	59
3.1. Time and synchronization	59
3.1.1. Time	59
3.1.2. Clocks	61
3.1.3. Synchronization	63
3.1.4. Generalized time	63

Contents

3.2.	Data acquisition	63
3.2.1.	Uniform sampling	64
3.2.2.	Nonuniform sampling	66
3.2.3.	Data acquisition structures	68
3.3.	Digital resampling	70
3.3.1.	Spectral effects and filter requirements	70
3.3.2.	Filter algorithms	74
3.3.3.	Number formats	83
3.4.	Quality of measurements and signals	87
3.4.1.	Measurement uncertainty	87
3.4.2.	Signal quality	92
3.4.3.	Estimation of signal parameters	94
4.	Modeling	99
4.1.	System model	99
4.1.1.	Event detection	99
4.1.2.	Waveform sampling	100
4.2.	Acquisition errors	101
4.2.1.	Event detection	101
4.2.2.	Waveform sampling	106
4.2.3.	Specification of synchronization precision	113
4.3.	Estimation of the required synchronization precision	113
4.4.	Approaches to time synchronous data acquisition	114
4.4.1.	Event detection	115
4.4.2.	Waveform sampling	115
4.5.	Approaches to synchronous angular sampling	116
4.6.	Testing data acquisition systems	118
4.6.1.	Synchronous event detection	118
4.6.2.	Synchronous waveform sampling	119
4.6.3.	Synchronous angular sampling	121
5.	Implementation	123
5.1.	Wireless sensor network for experiments	124
5.1.1.	Sensor nodes	124
5.1.2.	Execution environment	128
5.1.3.	TDMA-protocol	134
5.1.4.	Data acquisition framework	135
5.1.5.	Application transducers	147
5.1.6.	Installation at induction motor test bench	157
5.2.	Time synchronous data acquisition	159
5.2.1.	Synchronization services	159
5.2.2.	Event detection	165
5.2.3.	Waveform acquisition	165

5.3. Synchronous angular sampling	168
5.3.1. Choice of resampling algorithm	168
5.3.2. Filter adaptation	172
5.3.3. Filter design	172
5.3.4. Implementation of filter algorithm	174
5.3.5. Network integration	177
6. Experiments	181
6.1. Wireless sensor network	181
6.1.1. Power consumption	181
6.1.2. Data throughput	188
6.2. Time synchronous event detection	192
6.2.1. Experimental setup	193
6.2.2. Relative drift of clocks	194
6.2.3. Synchronization precision	195
6.2.4. Power consumption	203
6.2.5. Conclusions	204
6.3. Application example: acoustic localization	205
6.3.1. Model	205
6.3.2. Estimation of required synchronization accuracy	206
6.3.3. Experiments	207
6.3.4. Results	209
6.3.5. Uncertainty analysis	212
6.3.6. Conclusions	216
6.4. Time synchronous waveform acquisition	217
6.4.1. Experimental setup	217
6.4.2. Signal quality	218
6.4.3. Missing samples	224
6.4.4. Power consumption	225
6.4.5. Conclusions	226
6.5. Synchronous angular sampling	227
6.5.1. Analysis of measurement chain for angular sampling	227
6.5.2. Test of resampling algorithms	231
6.5.3. Acquisition of generated signals	236
6.5.4. Data acquisition at motor test bench	240
6.5.5. Conclusions	246
7. Conclusions and outlook	247
7.1. Summary	247
7.2. Conclusions	248
7.3. Outlook	250

Bibliography	263
---------------------	------------

Appendix	285
A. Sensor Nodes	287
B. Evaluating the polynomial kernel of a transposed Farrow filter	291
C. Application sensors	294
C.1. Microphone	294
C.2. Current and voltage sensors	295
C.3. Rotary encoder	297
D. Angular resampling filer	298
D.1. Filter design	298
D.2. MATLAB implementation	300
D.3. C implementations	302
D.3.1. C floating-point implementation	302
D.3.2. C fixed-point implementation	306
D.3.3. C header files for floating- and fixed-point	313
E. Results of event timestamping experiments	315
E.1. Network configuration 2	315
E.2. Network configuration 3	317
E.3. Network configuration 4	319
E.4. Network configuration 5	321
E.5. Network configuration 6	323
E.6. Network configuration 7	324
E.7. Network configuration 8	326
