Preface *xi*

1 Soft Materials Driven by Photothermal Effect and Their Applications *1*

Hari K. Bisoyi, Augustine M. Urbas, and Quan Li

- 1.1 Introduction *1*
- 1.2 Liquid Crystals Driven by Photothermal Effect *3*
- 1.3 Polymers Driven by Photothermal Effect *16*
- 1.4 Gels Driven by Photothermal Effect *23*
- 1.5 Summary and Outlook *31*
- Acknowledgments *32*
- References *32*

2 Photoresponsive Supramolecular Polymers *45*

Yuichi Kitamoto, Keisuke Aratsu, and Shiki Yagai

- 2.1 Introduction *45*
- 2.2 Photoresponsive Supramolecular Polymers by Host–Guest and Coordination Systems *46*
- 2.3 Photoresponsive Supramolecular Polymers by Complementary Hydrogen Bonds *52*
- 2.4 Photoresponsive Supramolecular Polymers by Stacking of Photochromic Molecules *61*
- 2.5 Photoresponsive Supramolecular Polymers with Photocontrollable 1D Topology *76*
- 2.6 Summary and Outlook *83*
- References *84*

3 Light-Driven Self-Organized Liquid Crystalline Nanostructures Enabled by Chiral Molecular Switches or Motors: From 1D to 3D Photonic Crystals *91*

Ling Wang and Quan Li

- 3.1 Introduction *91*
- 3.2 Light-Driven Cholesteric Liquid Crystals *93*
- 3.2.1 Cholesteric LCs with Chiral Azobenzene Photoswitches *93*

3.2.2	Cholesteric LCs with Chiral Diarylethene Photoswitches	100
3.2.3	Cholesteric LCs with Chiral Spirooxazine and Overcrowded Alkenes	104
3.3	Light-Driven Blue Phase Liquid Crystals	106
3.4	Light-Driven Chiral Liquid Crystal Microdroplets and Microshells	109
3.5	Summary and Perspective	114
	Acknowledgments	115
	References	116
4	Photochemical Chirality Induction and Inversion in Soft Materials	125
	<i>Yuna Kim, Noushaba N. Mafy, and Nobuyuki Tamaoki</i>	
4.1	Introduction	125
4.2	Chirality Induction from Achiral Soft Materials by CPL	126
4.2.1	Achiral LMW Liquid Crystals	128
4.2.2	Achiral Polymers	132
4.2.3	Self-Assembled Supramolecules	137
4.3	Photochemical Chirality Inversion from Chiral Soft Materials	139
4.3.1	Photoresponsive Chiral Dopants for Cholesteric Liquid Crystals	140
4.3.1.1	Azobenzenes	141
4.3.1.2	Diarylethenes	145
4.3.1.3	Overcrowded Alkenes	149
4.3.2	Chiral Polymers	153
4.3.2.1	Azopolymers	156
4.3.2.2	Overcrowded Alkene-Based Polymers	157
4.4	Summary and Outlook	160
	References	161
5	Soft Photoactuators in Microfluidics	167
	<i>Lu-Jian Chen and Quan Li</i>	
5.1	Introduction	167
5.2	Photoactive Soft Materials as Generic Microactuators	169
5.2.1	Light-Driven Microvalves	169
5.2.1.1	Hydrogel Microvalves Actuated by Photothermal Effect	171
5.2.1.2	Hydrogel Microvalves Actuated by Photoisomerization	174
5.2.2	Light-Driven Micropumps and Micromixers	177
5.2.3	Light-Driven Emulsification and De-emulsification	182
5.2.4	New Conceptual Light-Driven Fluid Motion in Microchannels	184
5.3	Soft Photoactuators as Optical Microcomponents	186
5.3.1	Tunable Microlenses Actuated by Photoactive Hydrogels	187
5.3.2	Microlens Arrays Actuated by Photoactive Emulsions	188
5.4	Summary and Outlook	191
	Acknowledgments	192
	References	192

6	Liquid Crystal Polymer Networks and Elastomers for Light-Fueled Robotics	197
	<i>Hao Zeng, Markus Lahikainen, Owies M. Wani, Alex Berdin, and Arri Priimagi</i>	
6.1	Photoactuation: A New Paradigm for Soft Micro-robotics	197
6.2	Photoactuation in LCNs	200
6.2.1	Photochemical Actuation	202
6.2.2	Photothermal Actuation	204
6.2.3	Comparison Between the Photochemical and Photothermal Effects	205
6.3	Diversity of Shape Changes in LCNs	207
6.3.1	Uniaxial Contraction/Expansion	207
6.3.2	Bending and Coiling	208
6.3.3	From Flat Sheets to Cones	209
6.3.4	Shape Changes via Complex Alignment Patterning	210
6.4	Physics and Dynamics of Small-Scale Robots	212
6.5	A Historical Overview of Light-Fueled Micro-robots	215
6.6	Outlook	219
	References	220
7	Light-Driven Phase Transitions in Liquid Crystals and Their Applications	227
	<i>Ammathanadu S. Amrutha, Ammathanadu S. Achalkumar, and Quan Li</i>	
7.1	Introduction to Liquid Crystals	227
7.2	Classification of Liquid Crystals	230
7.2.1	Calamitic Liquid Crystals: Phase Types and Structures	230
7.2.1.1	Nematic (N) and Cholesteric (N*) Mesophase	230
7.2.1.2	Smectic (Sm) Mesophase	231
7.2.1.3	Chiral Frustrated Phases	232
7.2.2	Discotic Liquid Crystals: Phase Types and Structures	234
7.2.2.1	Nematic (N) Phase	234
7.2.2.2	Columnar (Col) Mesophases	234
7.3	Light-Driven Phase Transitions in Liquid Crystals	235
7.3.1	Azobenzenes	235
7.3.1.1	Photoinduced Nematic to Isotropic Phase Transition	236
7.3.1.2	Photoinduced Nematic to Smectic Phase Transition	242
7.3.1.3	Photoinduced Phase Transition in Bent-Core Systems	244
7.3.1.4	Photoinduced Phase Transitions Involving Smectic and Chiral Phases	247
7.3.1.5	Photoinduced Phase Transitions Involving Columnar Phases	255
7.3.2	Axially Chiral Azo Compounds	256
7.3.3	Azoxybenzenes	258
7.3.4	Spiropyrans and Naphthopyrans	258
7.3.5	Fulgides	261
7.3.6	Ketones	262
7.3.7	Diarylethenes	264
7.3.8	Butadienes	267

7.3.9	Near Infrared Light-Driven Phase Transition in Hybrid Materials	269
7.4	Applications of Light-Driven Phase Transitions	272
7.4.1	Holography	272
7.4.2	Optical Storage Device	272
7.4.3	Photocontrol in Liquid Crystal Displays	273
7.4.4	Photocontrol of Mechanical Motion in Liquid Crystal Elastomers	274
7.5	Summary and Perspective	274
	References	275
8	Photomechanical Soft Nanocomposites: Synergies Between Soft Matrix and Energy Conversion Additives	285
	<i>Jing Hu, Shudeng Ma, Haifeng Yu, and Quan Li</i>	
8.1	Introduction	285
8.2	Photomechanical Nanocomposites Based on Photothermal Effect	286
8.2.1	Design Strategy	287
8.2.2	Fabrication	289
8.2.2.1	Homogeneous Single-Layer Films	290
8.2.2.2	Asymmetric Assembled Films	291
8.2.3	Properties of Photothermal Actuators	294
8.2.3.1	Characterization	294
8.2.3.2	Properties	295
8.3	Photomechanical Nanocomposites Based on Photochemical Effect	296
8.3.1	Photodeformable Supramolecular Systems	296
8.3.1.1	Reversible Metal–Ligand Coordination	296
8.3.1.2	Interaction Between Cyclodextrin and Azobenzene Derivatives	297
8.3.2	Liquid Crystalline Polymer Nanocomposites	299
8.3.2.1	Aligned Carbon Nanotube	300
8.3.2.2	Polymer-Dispersed Hybrid Film	301
8.3.2.3	Bilayer Composite Film	303
8.3.3	Incorporation of Upconversion Nanophosphors	303
8.4	Applications	305
8.5	Summary and Perspectives	309
	References	309
9	Photoresponsive Polyolefins	319
	<i>Shaji Varghese, John R. Severn, and Albertus P. H. J. Schenning</i>	
9.1	Introduction	319
9.2	Photoresponsive Polymers	320
9.3	Need for Non-liquid Crystalline or Commodity Polymeric Materials	322
9.4	Polyolefins	324
9.5	Photoresponsive Polyolefins	325
9.5.1	Bilayer Actuators	326
9.5.2	Single-Layer Actuators	330

9.6	Photo Patterning	332
9.7	Challenges for Photoresponsive Polyolefins and Future Directions	336
9.8	Conclusions	337
	References	337
10	A Photoresponsive Multi-Bilayered Film for a Tunable Photonic Crystal	341
	<i>Sunnam Kim and Seiji Kurihara</i>	
10.1	Introduction	341
10.1.1	Photonic Crystals	341
10.1.2	Tunable Photonic Crystals	342
10.2	Photo-Tunable 1D PCs	344
10.2.1	Photoresponsive Properties of Azobenzene Molecules	344
10.2.1.1	Optical Anisotropy Based on Molecular Orientation	345
10.2.1.2	Refractive Indices Depending on Molecular Orientation States	347
10.2.2	Fabrication of Multi-Bilayered Films	347
10.2.2.1	Control of Reflection Wavelength	348
10.2.2.2	Control of Reflection Intensity	349
10.2.3	On–Off Switching of Reflection Based on Refractive Index Change	350
10.2.4	Improvement of Response Speed	350
10.2.4.1	Introduction of Biphenyl LC Group	350
10.2.4.2	Introduction of Longer Conjugated LC Groups	352
10.3	Summary and Outlook	357
	References	357
11	Photoinduced Liquid Crystal Domain Engineering for Optical Field Control	361
	<i>Wei Hu, Peng Chen, and Yan-Qing Lu</i>	
11.1	Introduction	361
11.2	Photoalignment Technology and Photopatterning System	363
11.2.1	Photoalignment Technology	363
11.2.2	Photopatterning System	364
11.3	Binary LC Domains for Binary Optics	365
11.4	Space-Variant LC Domains for Geometric Phase Modulation	370
11.5	Digitalized LC Domains for Digitalized Geometric Phase	375
11.6	Discussion and Conclusion	379
	References	379
12	Azobenzene Polymers as Photoactive Materials for Shape Changes of Micro/Nano-objects	389
	<i>Régis Barillé, Ewelina Ortyl, and Sonia Zielinska</i>	
12.1	Why Azobenzene-Based Photoactive Nano-objects?	389
12.2	Azopolymer as a Photoactive Material	396
12.3	Fabrication of Photoactive Nano-objects	398
12.3.1	Fabrication of Photoactive Nanospheres	398

12.3.2	Fabrication of Nanotubes and Nanowires	403
12.3.3	Fabrications of Other Different Nano- and Micro-objects	404
12.4	Results	404
12.5	Summary and Outlook	407
	References	407
13	Light-Controlled Encapsulation and Release Enabled by Photoresponsive Polymer Self-Assemblies	413
	<i>Jesús del Barrio, Milagros Piñol, and Luis Oriol</i>	
13.1	Introduction	413
13.2	Photoresponsive Groups	415
13.3	Photoresponsive Polymer Self-Assemblies for Encapsulation and Release	417
13.3.1	Polymer Self-Assemblies from Linear Amphiphilic BCs	417
13.3.2	Polymer Self-Assemblies from Linear-Dendritic and Branched BCs	423
13.3.3	Polymer Self-Assemblies from Supramolecular BCs	427
13.3.4	Photoresponsive Polymer Capsules	429
13.3.5	Photoresponsive Microgels and Nanogels	433
13.3.6	Other Miscellaneous Photoresponsive Polymeric Encapsulants	434
13.4	Conclusions	437
	References	438
14	Photoresponsive Soft Materials Based on Reversible Proton Transfer	449
