Contents

Preface — V

1 Introduction — 1
1.1 Wave equation models for some physical phenomena — **2**
1.1.1 Waves on a string with fixed ends — **2**
1.1.2 Elastic waves in a rod — **3**
1.1.3 Waves on a membrane — **3**
1.1.4 The acoustic model for seismic waves — **4**
1.1.5 Sound waves in liquids and gases — **4**
1.1.6 Waves in blood vessels — **5**
1.1.7 Electromagnetic waves — **6**
1.2 Basic helpful knowledge — **7**
1.2.1 Necessary contractions in C_0-semigroup approach — **7**
1.2.2 Useful inequalities for decay rate analysis — **9**
1.2.3 Useful inequalities for compactly supported initial data — **18**
1.2.4 Results related to the weighted weak spaces — **22**
1.2.5 Results on the Fourier transform — **25**

2 Semilinear dissipative wave equations in $\mathbb{R}^n$ — 29
2.1 Property solutions with compactly supported initial data — **29**
2.1.1 Wave equation with frictional damping — **29**
2.1.2 Semilinear dissipative wave equation — **30**
2.2 Noncompactly supported initial data — **37**

3 Viscoelastic wave equation in $\mathbb{R}^n$ — 48
3.1 Viscoelastic evolution equation — **48**
3.1.1 Stability of solution — **50**
3.2 Nonlinear damping wave equation: finite speed of propagation principle — **59**
3.2.1 Global nonexistence — **60**

4 Nonlinear viscoelastic wave equations in weighted spaces — 71
4.1 Viscoelastic wave equation with nonlinear source — **71**
4.1.1 Existence of solution — **71**
4.1.2 Behavior of solution at ∞ — **77**
4.2 Viscoelastic wave equations with strong damping in $\mathbb{R}^n$ — **88**
4.2.1 Well-posedness result for the nonlinear case — **89**
4.2.2 Decay rate for linear cases — **98**

Bibliografische Informationen
http://d-nb.info/1349848441

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

5 Wave equation of Kirchhoff type with density — 103
5.1 Damped wave equation of Kirchhoff type — **103**
5.2 Wave equation of Kirchhoff type in viscoelasticity — **112**

6 Wave equation with logarithmic nonlinearities in Kirchhoff type — 130
6.1 Global existence in time — **131**
6.2 General decay estimates — **134**

7 Petrowsky–Petrowsky system in $\mathbb{R}^n$ — 147
7.1 Lack of exponential stability — **151**
7.2 Polynomial stability — **153**

8 System of three wave equations — 161
8.1 System of three wave equations with infinite memories — **161**
8.1.1 Polynomial stability — **169**
8.2 Three nonlinear wave equations depending on the relaxation functions — **178**
8.2.1 Local and global existence — **181**
8.2.2 Decay of solution — **190**
8.3 Systems of longitudinal m-nonlinear wave equations — **193**
8.3.1 Existence of solutions — **195**
8.3.2 Nonclassical decay of solution — **202**

9 Damped wave problems with memory term in Fourier spaces — 207
9.1 1D-nonlinear wave equations with more regularity — **207**
9.2 Damped wave equation with weak-memory — **210**
9.2.1 Solution decays time asymptotically to zero — **212**
9.3 Coupled system of wave equations — **219**
9.3.1 Decay rate of solution — **220**

10 Degenerate evolution equations in $\mathbb{R}^n$ — 230
10.1 Wave equation with structural δ-evolution — **230**
10.2 Plate equation with weak-memory — **237**

11 Structural damped wave equations with nonlinear memory terms — 245
11.1 Existence of unique solution — **245**
11.1.1 Existence and uniqueness results — **248**
11.2 Global time nonexistence of solutions — **263**
11.2.1 Finite time blow-up result — **266**

Bibliography — 287

Index — 289
