

Background	1
Barley	1
Net blotch	2
Leaf rust and stripe rust	4
Broadening the genetic base of resistance	6
DNA-based markers and QTL mapping techniques	7
Halle exotic barley 25	11
Objectives	12
Chapter 1) A nested association mapping population identifies multiple small effect QTL conferring resistance against net blotch (<i>Pyrenophora teres</i> f. <i>teres</i>) in wild barley¹	13
Abstract	13
Introduction	14
Material and methods	16
Results	21
Discussion	28
Conclusion	34
Chapter 2) Identification of QTL conferring resistance to stripe rust (<i>Puccinia striiformis</i> f. sp. <i>hordei</i>) and leaf rust (<i>Puccinia hordei</i>) in barley using nested association mapping (NAM)²	35
Abstract	35
Introduction	36
Material and methods	38
Results	43
Discussion	50
Conclusion	56
General discussion	57
Variation in infection severity	57
Applicability of HEB-25 for detection of QTL conferring fungal resistance	59
Allelic diversity and its use for resistance breeding	61
Identification of putative candidate genes	63
Summary	65
References	66
Supplementary files	84
