Preface — VII

1 Introduction — 1

2 Levels of description — 3

- 2.1 Equilibrium thermodynamics — 3
 - 2.1.1 Fundamental thermodynamic relation — 4
 - 2.1.2 One-homogeneity — 6
- 2.2 First law of thermodynamics — 7
- 2.3 Second law of thermodynamics — 7
- 2.4 Levels of description — 9
 - 2.4.1 Nonequilibrium fundamental thermodynamic relation — 9
 - 2.4.2 Thermodynamic potential — 10
- 2.5 Legendre transformation — 10
 - 2.5.1 Helmholtz free energy — 10
 - 2.5.2 Gibbs free energy — 12
 - 2.5.3 Enthalpy — 13
 - 2.5.4 Heat capacities — 13
- 2.6 Small body in large medium — 14
 - 2.6.1 Thermodynamic potential — 14
 - 2.6.2 Free energy — 16
 - 2.6.3 Heat of reaction — 17
 - 2.6.4 Maximum work — 17
 - 2.6.5 Braun–Le Chatelier principle — 18
- 2.7 What is entropy? — 21
 - 2.7.1 Uncertainty and information entropy — 22
 - 2.7.2 Principle of maximum entropy — 25
 - 2.7.3 Microcanonical distribution — 27
 - 2.7.4 Canonical distribution — 28
 - 2.7.5 Grand canonical distribution — 31
 - 2.7.6 Liouville entropy — 32
 - 2.7.7 Boltzmann entropy — 33
 - 2.7.8 Hydrodynamic entropy of ideal gases — 35
 - 2.7.9 Fundamental thermodynamic relation of ideal gases — 36
 - 2.7.10 Entropy of photons — 38
 - 2.7.11 Entropy of van der Waals fluid — 40
 - 2.7.12 Equilibrium statistical mechanics and loss of convexity — 47
 - 2.7.13 Suspension of elastic dumbbells — 47
 - 2.7.14 Is entropy subjective or objective? — 50

3	Hamiltonian mechanics — 53
3.1	Classical mechanics — 53
3.1.1	Newton's laws — 53
3.1.2	Hamilton canonical equations — 53
3.1.3	Variation principle — 54
3.1.4	Symmetries — 55
3.1.5	Summary — 57
3.2	General Hamiltonian evolution — 58
3.2.1	Poisson bracket — 58
3.2.2	Hamiltonian vector field — 61
3.2.3	Tensor fields — 62
3.2.4	Lie derivative — 63
3.2.5	Tangent and cotangent bundles — 64
3.2.6	Conserved quantities — 65
3.2.7	Lie algebra and Lie groups — 65
3.2.8	Lie algebra dual and Lie–Poisson bracket — 67
3.2.9	Jacobi identity — 68
3.2.10	Summary — 68
3.3	Dynamics of a rigid body — 69
3.4	Liouville equation — 71
3.5	Projection of Poisson brackets — 75
3.6	From Liouville to Boltzmann Poisson bracket — 76
3.7	Fluid mechanics — 78
3.7.1	From Boltzmann to the Poisson bracket of fluid mechanics — 78
3.7.2	Euler compressible equations — 81
3.7.3	Local thermodynamic equilibrium — 82
3.7.4	Weakly nonlocal fluid — 83
3.7.5	Poisson bivector — 84
3.7.6	Clebsch variables — 88
3.8	Mechanics of deformation — 89
3.8.1	Kinematics of labels — 90
3.8.2	Geometric derivation — 93
3.8.3	Kinematics of a general distortion matrix — 94
3.8.4	Distortion with labels — 96
3.8.5	Alternative derivation of kinematics of a distortion matrix — 97
3.8.6	Kinematics of the left Cauchy–Green (or Finger) tensor — 97
3.8.7	Elasticity — 100
3.8.8	Non-Newtonian fluids — 101
3.9	Mechanics of heat — 103
3.10	Electromagnetic field — 106
3.10.1	Maxwell equations in a vacuum — 106
3.10.2	Charged particle in electromagnetic field — 108

3.10.3	Kinetic electrodynamics — 109
3.10.4	Electromagnetohydrodynamics — 112
3.10.5	Magnetohydrodynamics — 122
3.10.6	Electrohydrodynamics — 122
4	Irreversible evolution — 125
4.1	Time reversal transformation — 125
4.1.1	Particles — 125
4.1.2	General state variables — 127
4.1.3	Parity changes with level — 128
4.1.4	Mass, energy and entropy — 128
4.1.5	Hamiltonian evolution is reversible — 129
4.1.6	Irreversible evolution equations — 130
4.1.7	Dissipation — 130
4.2	Why MaxEnt? — 131
4.3	On the origin of the second law — 132
4.4	Entropic representation — 133
4.4.1	Gradient dynamics — 133
4.4.2	Isothermal dissipation — 136
4.4.3	Thermodynamic forces and fluxes — 137
4.4.4	Maxwell–Onsager reciprocal relations — 138
4.4.5	Quasilinear Irreversible evolution — 139
4.5	Energetic representation — 139
4.5.1	Local gradient dynamics — 140
4.6	Examples — 142
4.6.1	Local dissipation — 142
4.6.2	Weakly nonlocal dissipation — 142
4.6.3	Strongly nonlocal dissipation. Boltzmann collision integral — 145
5	Reversible and irreversible evolution — 147
5.1	GENERIC — 147
5.1.1	Reversible and irreversible evolution equations — 147
5.1.2	Infinite dimensions — 148
5.1.3	Lyapunov function — 148
5.2	Onsager–Casimir reciprocal relations — 149
5.3	Reductions and extensions — 150
5.3.1	Dynamic MaxEnt reduction — 151
5.3.2	Ehrenfest reduction — 153
5.3.3	Extensions — 157
5.4	Hyperbolic and Fourier heat conduction — 162
5.5	Left Cauchy–Green tensor — 164
5.6	Kinetic theory — 166

5.6.1	Boltzmann equation —	167
5.6.2	Grad hierarchy —	170
5.6.3	One-and-two-point kinetic theory —	176
5.7	Complex fluids —	177
5.7.1	Weak nonlocality in space and momentum —	178
5.7.2	Conformation tensor —	180
5.7.3	Reynolds stress —	184
5.7.4	Nonlocal vorticity —	187
5.8	Symmetric hyperbolic thermodynamically consistent (SHTC) equations —	188
5.9	Electromagnetic radiation —	190
5.9.1	Kinetic theory —	190
5.9.2	Radiation hydrodynamics —	191
5.10	Fiber suspensions —	192
5.10.1	Rigid dumbbell —	193
5.10.2	Rigid rod —	195
5.10.3	Summary —	199
6	Multicomponent systems —	201
6.1	Entropy of binary mixtures —	201
6.1.1	Binary Liouville entropy —	201
6.1.2	Binary Boltzmann entropy —	201
6.1.3	Binary hydrodynamic entropy for ideal gases —	206
6.1.4	Classical irreversible thermodynamic binary entropy of ideal gases —	207
6.1.5	Binary mechanical equilibrium —	209
6.1.6	Binary Sackur–Tetrode relation —	211
6.2	Hierarchy of Poisson brackets for binary mixtures —	212
6.2.1	Liouville Poisson bracket for binary mixtures —	212
6.2.2	Boltzmann Poisson bracket for binary mixtures —	213
6.2.3	Binary fluid mechanics —	214
6.2.4	Poisson bracket for mixtures in CIT —	216
6.2.5	Mixture as a one-component fluid —	217
6.3	Dissipation in mixtures —	218
6.3.1	Dissipation in binary kinetic theory —	218
6.3.2	Dissipation in binary hydrodynamics —	218
6.3.3	Dissipation in ternary hydrodynamics —	223
6.3.4	Dissipation in isothermal mechanical equilibrium —	227
6.3.5	Chemical reactions —	228
6.4	Mixtures in electromagnetic fields —	233
6.4.1	Binary kinetic electrodynamics —	234
6.4.2	Binary electromagnetohydrodynamics —	235

6.4.3	Classical binary electromagnetohydrodynamics —	239
6.4.4	Binary electrohydrodynamics —	240
6.4.5	Binary magnetohydrodynamics —	241

7 Contact geometry — 243

7.1	Motivation —	243
7.2	Contact GENERIC —	244
7.3	Observations —	247

A Mathematical aspects — 251

A.1	Partial derivatives —	251
A.2	Functional derivatives —	251
A.3	Legendre transformation —	254
A.4	Note about multiplication of delta functions —	257
A.5	Manipulations with Poisson brackets —	260

Bibliography — 267

Index — 275
